This workbook was created by mathematics instructors at Scottsdale Community College in Scottsdale, Arizona. It is designed to lead students through Intermediate Algebra, and to help them develop a deep understanding of the concepts. The included curriculum is broken into twelve lessons. Each lesson includes the following components:

MINI-LESSON

- The Mini-Lesson is the main instructional component for each lesson.
- Ideas are introduced with practical applications.
- **Worked Examples** are provided for each topic in the Mini-Lesson. Read through these examples carefully. Use these as a guide for completing similar problems.
- **Media Examples** are to be completed by watching online videos and taking notes/writing down the problem as written by the instructor. Video links can be found at http://sccmath.wordpress.com/mat09x/ or may be located within the Online Homework Assessment System.
- **You-Try** problems help reinforce Lesson concepts and should be worked in the order they appear showing as much work as possible. Answers can be checked in Appendix A.

PRACTICE PROBLEMS

- This section follows the Mini-Lesson. If you are working through this material on your own, the recommendation is to work all practice problems. If you are using this material as part of a formal class, your instructor will provide guidance on which problems to complete. Your instructor will also provide information on accessing answers/solutions for these problems.

LESSON ASSESSMENT

- The last part of each Lesson is a short assessment. If you are working through this material on your own, use these assessments to test your understanding of the lesson concepts. Take the assessments without the use of the book or your notes and then check your answers. If you are using this material as part of a formal class, your instructor will provide instructions for completing these problems.

ONLINE HOMEWORK ASSESSMENT SYSTEM

- If you are using these materials as part of a formal class and your class utilizes an online homework/assessment system, your instructor will provide information as to how to access and use that system in conjunction with this workbook.

Lesson 5 – Introduction to Exponential Functions ........................................................................................... 169

  Mini-Lesson 5 .................................................................................................................................................. 171
    Section 5.1 – Linear Functions vs. Exponential Functions ........................................................................ 171
    Section 5.2 – Characteristics of Exponential Functions ............................................................................. 178
Lesson 1 – Introduction to Functions

Throughout this class, we will be looking at various Algebraic Functions and the characteristics of each. Before we begin, we need to review the concept of what a Function is and look at the rules that a Function must follow. We also need to investigate the different ways that we can represent a Function. It is important that we go beyond simple manipulation and evaluation of these Functions by examining their characteristics analyzing their behavior. Looking at the Functions modeled as Graphs, Tables and Sets of Ordered Pairs is critical to accomplishing that goal.

Lesson Topics:

Section 1.1  What is a function?
- Definition of function
- Independent and Dependent Variables

Section 1.2  Multiple Representations of Functions
- Sets of ordered pairs (input, output)
- Tables
- Graphs
- Vertical Line Test
- Behavior of Graphs

Section 1.3  Function Notation
- Function evaluation
- Working with input and output
- Multiple Representations
- Using your graphing calculator to create graphs and tables

Section 1.4  Domain and Range
- Definitions
- Multiple Representations
- Restricting Domain and Range (calculator)

Section 1.5 Applications of Functions
- Criteria for a good graph
- Practical Domain and Range

Mini-Lesson 1

Section 1.1 – What is a Function?

Intermediate Algebra is a study of functions and their characteristics. In this class, we will study LINEAR, EXPONENTIAL, LOGARITHMIC, QUADRATIC, RATIONAL, & RADICAL functions. Before we learn the specifics of these functions, we need to review/learn the language and notation of FUNCTIONS.

What is a Function?

The concept of “function” is one that is very important in mathematics. The use of this term is very specific and describes a particular relationship between two quantities: an input quantity and an output quantity. Specifically, a relationship between two quantities can be defined as function if it is the case that “each input value is associated with only one output value”.

Why Do We Care About Functions?

Imagine that you are a nurse working the emergency room of a hospital. A very sick person arrives. You know just the medicine needed but you are unsure the exact dose. First, you determine the patient’s weight (200 pounds). Then you look at the table to the right and see the given dosage information:

<table>
<thead>
<tr>
<th>Weight in lbs.</th>
<th>mL of Medicine</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>10</td>
</tr>
<tr>
<td>200</td>
<td>100</td>
</tr>
</tbody>
</table>

You are immediately confused and very concerned. How much medicine do you give? 10 ml or 100 ml? One amount could be too much and the other not enough. How do you choose the correct amount? What you have here is a situation that does NOT define a function (and would not occur in real life). In this case, for the input value 200 lbs, there are two choices for the output value. If you have a function, you will not have to choose between output values for a given input. In the real case of patients and medicine, the dosage charts are based upon functions.

A More Formal Definition of Function:

A FUNCTION is a rule that assigns a single, unique output value to each input value.
Problem 1

MEDIA EXAMPLE – Do The Data Represent A Function?

The table below gives the height $H$, in feet, of a golf ball $t$ seconds after being hit.

<table>
<thead>
<tr>
<th>$t$ = Time (in seconds)</th>
<th>$H$ = Height (in feet)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>80</td>
</tr>
<tr>
<td>2</td>
<td>128</td>
</tr>
<tr>
<td>3</td>
<td>144</td>
</tr>
<tr>
<td>4</td>
<td>128</td>
</tr>
<tr>
<td>5</td>
<td>80</td>
</tr>
<tr>
<td>6</td>
<td>0</td>
</tr>
</tbody>
</table>

a) Identify the input quantity (include units).
   _______________________________________________________________________

Identify the input variable.____________________________________________________________________

Identify the output quantity (include units). ______________________________________________________________________

Identify the output variable. ______________________________________________________________________

b) Write the data as a set of ordered pairs.

c) Interpret the meaning of the ordered pair $(3, 144)$.

d) Is height of the golf ball a function of time? Why or why not?

e) Is time a function of the height of the golf ball? Why or why not?
Problem 2  WORKED EXAMPLE – Investigating Functional Relationships

Let’s investigate the functional relationship between the two quantities, “numerical grade” and “letter grade”. First, let Numerical Grade be the input quantity and Letter Grade be the output quantity. Below is a sample data set that is representative of the situation.

<table>
<thead>
<tr>
<th>Numerical grade</th>
<th>Letter Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>95</td>
<td>A</td>
</tr>
<tr>
<td>92</td>
<td>A</td>
</tr>
<tr>
<td>85</td>
<td>B</td>
</tr>
<tr>
<td>73</td>
<td>C</td>
</tr>
</tbody>
</table>

The numbers above are made up to work with this situation. Other numbers could be used. We are assuming a standard 90, 80, 70, etc… grading scale. Hopefully you can see from this data that no matter what numerical value we have for input, there is only one resulting letter grade. Notice that the repeated outputs “A” are not a problem since the inputs are different. You can uniquely predict the output for any numerical grade input.

So, from this information we can say that Letter Grade (output) is a function of Numerical Grade (input).

Now let’s switch the data set above.

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Numerical Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>95</td>
</tr>
<tr>
<td>A</td>
<td>92</td>
</tr>
<tr>
<td>B</td>
<td>85</td>
</tr>
<tr>
<td>C</td>
<td>73</td>
</tr>
</tbody>
</table>

Can you see there is a problem here? If you say that you have an A in a class, can you predict your numerical grade uniquely? No. There are a whole host of numerical scores that could come from having an A. The same is true for all the other letter grades as well. Therefore, Numerical Grade (output) is NOT a function of Letter Grade (input).

Summary:

- Letter Grade IS a function of Numerical Grade but
- Numerical Grade is NOT a function of Letter Grade

Additional Terminology

In the language of functions, the phrase INDEPENDENT VARIABLE means input and the phrase DEPENDENT VARIABLE means output. The dependent variable (output) “depends on” or is a “function of” the independent variable (input).
### Problem 3 YOU TRY – Do The Data Represent A Function?

The table below gives the value of a car $n$ years after purchase

<table>
<thead>
<tr>
<th>$n$ = Time (in years)</th>
<th>$V$ = Value (in dollars)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>32540</td>
</tr>
<tr>
<td>1</td>
<td>28310</td>
</tr>
<tr>
<td>2</td>
<td>24630</td>
</tr>
<tr>
<td>3</td>
<td>21428</td>
</tr>
<tr>
<td>4</td>
<td>18642</td>
</tr>
<tr>
<td>5</td>
<td>16219</td>
</tr>
<tr>
<td>6</td>
<td>14110</td>
</tr>
</tbody>
</table>

a) Identify the input quantity (include units). ____________________________________________

b) Identify the output quantity (include units). ____________________________________________

c) Interpret the meaning of the ordered pair (2, 24630).

d) Is the value of the car a function of time? Why or why not?
Section 1.2 – Multiple Representations of Functions

**Problem 4**

**MEDIA EXAMPLE – Determine Functional Relationships Using Multiple Representations**

SETS OF ORDERED PAIRS (input, output)
Which of the following represent functional relationships?

\{-3, 2\}, \{(5, 0), (4, -7)\} \quad \{(0, 2), (5, 1), (5, 4)\} \quad \{-3, 2\}, \{(5, 2), (4, 2)\}

TABLES
Which of the following represent functional relationships?

<table>
<thead>
<tr>
<th>x</th>
<th>y</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>52</td>
</tr>
<tr>
<td>4</td>
<td>41</td>
</tr>
<tr>
<td>4</td>
<td>30</td>
</tr>
<tr>
<td>7</td>
<td>19</td>
</tr>
<tr>
<td>3</td>
<td>128</td>
</tr>
<tr>
<td>11</td>
<td>64</td>
</tr>
<tr>
<td>24</td>
<td></td>
</tr>
<tr>
<td>38</td>
<td>16</td>
</tr>
<tr>
<td>0</td>
<td>4</td>
</tr>
<tr>
<td>1</td>
<td>4</td>
</tr>
<tr>
<td>2</td>
<td>4</td>
</tr>
<tr>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>

GRAPHS
Which of the following represent functional relationships?

**THE VERTICAL LINE TEST**
- If all vertical lines intersect the graph of a relation at only one point, the relation is also a function. One and only one output value exists for each input value.
- If any vertical line intersects the graph of a relation at more than one point, the relation “fails” the test and is NOT a function. More than one output value exists for some (or all) input value(s).
Problem 5  WORKED EXAMPLE – Determine Functional Relationships Using Multiple Representations

The table below shows 3 different representations for two relationships. Determine which relationship defines a function.

<table>
<thead>
<tr>
<th></th>
<th>Functions</th>
<th>Not Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set of Ordered Pairs</td>
<td>{(-7, 6), (-3, 3), (1, 8), (5, 8), (11, 0)}</td>
<td>{(8, 3), (6, 1), (8, -1), (6, 11), (2, -5)}</td>
</tr>
<tr>
<td></td>
<td>No input value is repeated in an ordered pair.</td>
<td>Two of the listed input values (6 &amp; 8) are associated with more than one output value.</td>
</tr>
<tr>
<td>Table</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>x</strong></td>
<td>-4</td>
</tr>
<tr>
<td></td>
<td><strong>x</strong></td>
<td>0</td>

<tr>
<td></td>
<td><strong>x</strong></td>
<td>0</td>
</tr>
<tr>
<td></td>
<td><strong>x</strong></td>
<td>0</td>
</tr>
<tr>
<td></td>
<td>1</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>5</td>
<td>10</td>
</tr>
<tr>
<td></td>
<td>OR</td>
<td></td>
</tr>
<tr>
<td></td>
<td>All input values are associated with one, unique output value.</td>
<td>Two of the listed input values (1 &amp; 4) are associated with more than one output value.</td>
</tr>
<tr>
<td>Graph</td>
<td>No vertical line intersects the graph in more than one point. We say the graph PASSES the VERTICAL LINE TEST.</td>
<td>Vertical lines intersect the graph at more than one point meaning inputs are repeated with different outputs. We say that the graph FAILS the VERTICAL LINE TEST.</td>
</tr>
</tbody>
</table>
Lesson 1 – Introduction to Functions

Problem 6  YOU TRY – Determine Functional Relationships Using Multiple Representations

Which of the following represent functional relationships?

A \{(4, 1), (7, 1), (-3, 1), (5, 1)\}

B

\[
\begin{array}{c|c}
\text{B} & \\
\hline
5 & 4 \\
5 & 6 \\
5 & 8 \\
5 & 1 \\
\end{array}
\]

C

\[
\begin{array}{c|c}
\text{C} & \\
\hline
x & y \\
\hline
5 & 4 \\
5 & 6 \\
5 & 8 \\
5 & 1 \\
\end{array}
\]

D

E \{(3, 5), (3, 6), (8, 1), (5, 4)\}

F

\[
\begin{array}{c|c}
\text{F} & \\
\hline
x & y \\
\hline
0 & 2 \\
3 & 2 \\
5 & 3 \\
11 & 5 \\
\end{array}
\]

Problem 7  MEDIA EXAMPLE – Does the Statement Describe A Function?

Explain your choice for each of the following. Remember when the word “function” is used, it is in a purely MATHEMATICAL sense, not in an everyday sense.

a) Is the number of children a person has a function of their income?

b) Is your weekly pay a function of the number of hours you work each week? (Assume you work at an hourly rate job with no tips).
A function is:
- INCREASING if the outputs get larger,
- DECREASING if the outputs get smaller,
- CONSTANT if the outputs do not change.

NOTE: We read graphs just like we read a book…from left to right.

a) The following functions are INCREASING

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>4</td>
</tr>
<tr>
<td>1</td>
<td>6</td>
</tr>
<tr>
<td>2</td>
<td>12</td>
</tr>
<tr>
<td>3</td>
<td>24</td>
</tr>
</tbody>
</table>

b) The following functions are DECREASING

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>10</td>
</tr>
<tr>
<td>1</td>
<td>5</td>
</tr>
<tr>
<td>2</td>
<td>0</td>
</tr>
<tr>
<td>3</td>
<td>-5</td>
</tr>
</tbody>
</table>

c) The following functions are CONSTANT

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>4</td>
</tr>
<tr>
<td>1</td>
<td>4</td>
</tr>
<tr>
<td>2</td>
<td>4</td>
</tr>
<tr>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>
Section 1.3 – Function Notation

FUNCTION NOTATION is used to indicate a functional relationship between two quantities as follows:

\[ \text{Function Name (INPUT)} = \text{OUTPUT} \]

So, the statement \( f(x) = y \) would refer to the function \( f \), and correspond to the ordered pair \((x,y)\), where \( x \) is the input variable, and \( y \) is the output variable.

**Function Evaluation:** To evaluate a function at a particular value of the input variable, replace each occurrence of the input variable with the given value and compute the result.

Note: Use of ( ) around your input value, especially if the input is negative, can help achieve correct results.

**Problem 9**  
**MEDIA EXAMPLE – Function Evaluation**

Given \( f(x) = 2x - 5 \), evaluate \( f(2), f(-1), f(x + 1) \) and \( f(-x) \).
Problem 10  WORKED EXAMPLE – Function Evaluation

If \( f(x) = 5x^2 - 3x - 10 \), find \( f(2) \) and \( f(-1) \).

\[
\begin{align*}
  f(2) &= 5(2)^2 - 3(2) - 10 \\
       &= 5(4) - 6 - 10 \\
       &= 20 - 6 - 10 \\
       &= 14 - 10 \\
       &= 4
\end{align*}
\]

\[
\begin{align*}
  f(-1) &= 5(-1)^2 - 3(-1) - 10 \\
        &= 5(1) + 3 - 10 \\
        &= 8 - 10 \\
        &= -2
\end{align*}
\]

When working with FUNCTIONS, there are two main questions we will ask and solve as follows:

- Given a particular INPUT value, what is the corresponding OUTPUT value?
- Given a particular OUTPUT value, what is the corresponding INPUT value?

Problem 11  MEDIA EXAMPLE – Working with Input and Output

Given \( f(x) = 2x + 5 \), determine each of the following. Write your answers as ordered pairs.

GIVEN INPUT FIND OUTPUT

Find \( f(0) \) Find \( f(-2) \)

GIVEN OUTPUT FIND INPUT

Find \( x \) if \( f(x) = 7 \) Find \( x \) if \( f(x) = -11 \)
Problem 12 | YOU TRY – Working with Input and Output

Given $f(x) = -3x - 4$, compute each of the following. Show all steps, and write your answers as ordered pairs. Write answers as integers or reduced fractions (no decimals).

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>Find $f(2)$</td>
</tr>
<tr>
<td>b)</td>
<td>Find $x$ if $f(x) = 7$</td>
</tr>
<tr>
<td>c)</td>
<td>Find $f(-3)$</td>
</tr>
<tr>
<td>d)</td>
<td>Find $x$ if $f(x) = -12$</td>
</tr>
<tr>
<td>e)</td>
<td>Find $f(-x)$</td>
</tr>
<tr>
<td>f)</td>
<td>Find $f(x - 5)$</td>
</tr>
</tbody>
</table>
The function \( g(x) \) is shown below

\[
g = \{(1, 3), (5, 2), (8, 3), (6, -5)\}
\]

\[g(1) = \phantom{1} \quad \text{Find } x \text{ if } g(x) = -5. \quad x = \phantom{5}\]

Find \( x \) if \( g(x) = 3 \). \( x = \phantom{3} \)

---

The function \( V(n) \) is shown below gives the value, \( V \), of an investment (in thousands of dollars) after \( n \) months.

<table>
<thead>
<tr>
<th>( n )</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>( V(n) )</td>
<td>2.31</td>
<td>3.02</td>
<td>5.23</td>
<td>3.86</td>
</tr>
</tbody>
</table>

Identify the input quantity (include units). ________________________________

Identify the output quantity (include units). ________________________________

Write a sentence explaining the meaning of the statement \( V(1) = 2.31 \).

Determine \( V(3) \) and write a sentence explaining its meaning.

For what value of \( n \) is \( V(n) = 3.02 \)? Interpret your answer in a complete sentence.
The function $D(t)$ below shows a person’s distance from home as a function of time.

Identify the input quantity (include units). ________________________________

Identify the output quantity (include units). ________________________________

Write a sentence explaining the meaning of the statement $D(15) = 10$.

Determine $D(0)$ and write a sentence explaining its meaning.

For what value of $t$ is $D(t) = 0$? Interpret your answer in a complete sentence.
Consider the function $y = 5 - 2x$

a) Use your graphing calculator to complete the table below

<table>
<thead>
<tr>
<th>$x$</th>
<th>0</th>
<th>3</th>
<th>7</th>
<th>9</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>$y$</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

b) Use your graphing calculator to sketch the graph of $y = 5 - 2x$.

Use the standard viewing window (ZOOM→6) $\text{xmin} = -10, \text{xmax} = 10, \text{ymin} = -10, \text{ymax} = 10$

Draw what you see on your calculator screen.

\[
\text{Graph}
\]

c) Use your graphing calculator to sketch the graph of $y = 5 - 2x$.

Use viewing window $\text{xmin} = 0, \text{xmax} = 3, \text{ymin} = 0, \text{ymax} = 5$

Draw what you see on your calculator screen.

\[
\text{Graph}
\]
Section 1.4 – Domain and Range

The DOMAIN of a function is the set of all possible values for the input quantity.
The RANGE of a function is the set of all possible values for the output quantity.

**Problem 17** MEDIA EXAMPLE – Domain and Range, Multiple Representations

**SET OF ORDERED PAIRS**
Determine the domain and range of the function \( P(x) = \{(2, 3), (4,-5), (6,0), (8,5)\} \)

Domain: __________________________________________________
Range: _________________________________________________

**TABLE**
Determine the domain and range of the function \( R(t) \) defined below.

<table>
<thead>
<tr>
<th>( t )</th>
<th>0</th>
<th>2</th>
<th>5</th>
<th>8</th>
<th>11</th>
</tr>
</thead>
<tbody>
<tr>
<td>( R(t) )</td>
<td>23</td>
<td>54</td>
<td>66</td>
<td>87</td>
<td>108</td>
</tr>
</tbody>
</table>

Domain: __________________________________________________
Range: _________________________________________________

**GRAPH**
Determine the domain and range of the function \( g(x) \) defined below.

Domain of \( g(x) \):
Inequality Notation: _____________________________
Interval Notation: _____________________________

Range of \( g(x) \):
Inequality Notation: _____________________________
Interval Notation: _____________________________
Graph the following function on your graphing calculator restricting the input window to $X_{\text{min}} = -5$ and $X_{\text{max}} = 5$ and draw an accurate sketch here [Go to $Y=$ and type in the equation. Then go to Window and enter -5 for $X_{\text{min}}$ and 5 for $X_{\text{max}}$. Leave $Y_{\text{min}}$ at -10 and $Y_{\text{max}}$ at 10]. Indicate the domain and range given the window above.

a) $y = x - 1$

Domain: _______________________________

Range: _______________________________

b) If the input and output are not restricted as above, indicate the domain and range for this function.

Domain:

Range:
Problem 19 | YOU TRY – Domain and Range, Multiple Representations

Find the domain and range for the functions below. Use proper notation for your domain/range responses.

a) Set of ordered pairs

D(r) = {(7, 8), (8, 12), (11, 21)}

Domain: ____________________________

Range: ____________________________

b) Table of values

<table>
<thead>
<tr>
<th>n</th>
<th>A(n)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>51</td>
</tr>
<tr>
<td>6</td>
<td>42</td>
</tr>
<tr>
<td>8</td>
<td>33</td>
</tr>
</tbody>
</table>

Domain: ____________________________

Range: ____________________________

c) Graph

Domain of \( f(x) \):
Inequality Notation: ____________
Interval Notation: ____________

Range of \( f(x) \):
Inequality Notation: ____________
Interval Notation: ____________
Section 1.5 – Applications of Functions

Criteria for a GOOD GRAPH:
1. The horizontal axis should be properly labeled with the name and units of the input quantity.
2. The vertical axis should be properly labeled with the name and units of the output quantity.
3. Use an appropriate scale.
   - Start at or just below the lowest value.
   - End at or just above the highest value.
   - Scale the graph so the adjacent tick marks are equal distance apart.
   - Use numbers that make sense for the given data set.
   - The axes meet at (0,0) Use a “/” between the origin and the first tick mark if the scale does not begin at 0.
4. All points should be plotted correctly, and the graph should be neat and uncluttered.

Problem 20 MEDIA EXAMPLE – Understanding Applications of Functions

Suppose that the cost to fill your 15-gallon gas tank is determined by the function C(g) = 3.29g where C is the output (cost in $) and g is the input (gallons of gas).

a) Draw a GOOD graph of this function in the space below. Provide labels for your axes. You may use the graphing feature of your calculator to help you.
b) Use the Table feature of your graph and identify the first and last ordered pairs that are on the graph (based on the information above). [2^nd>Graph will take you to the table]. Include both ordered pairs and function notation.

c) What is the INPUT quantity (including units) for this function? Name the smallest and largest possible input quantity then use this information to identify the PRACTICAL DOMAIN.

d) What is the OUTPUT quantity (including units) for this function? Name the smallest and largest possible output quantity then use this information to identify the PRACTICAL RANGE.

**Practical Domain:** The PRACTICAL DOMAIN of a function is the set of all possible input values that are realistic for a given problem.

**Practical Range:** The PRACTICAL RANGE of a function is the set of all possible output values that are realistic for a given problem.
### Problem 21

**WORKED EXAMPLE – Practical Domain and Range**

Let the function $M(t) = 15t$ represent the distance you would travel bicycling $t$ hours. Assume you can bike no more than 10 hours. Find the practical domain and practical range for this function.

BEGIN by drawing an accurate graph of the situation. Try and determine the smallest and largest input values then do the same thing for the output values.

<table>
<thead>
<tr>
<th>BEGIN by drawing an accurate graph of the situation. Try and determine the smallest and largest input values then do the same thing for the output values.</th>
</tr>
</thead>
</table>

#### PRACTICAL DOMAIN

In this situation, the input values you can use are related to biking and the input is TIME. You are told you can bike no more than 10 hours. You also cannot bike a negative number of hours but you CAN bike 0 hours.

Therefore, the Practical Domain is

$$0 \leq t \leq 10 \text{ hours}$$

This means “all the values of $t$ between and including 0 and 10”.

#### PRACTICAL RANGE

In this situation, the outputs represent distances traveled depending on how long you bike. Looking at the endpoints for Practical Domain, you can find you Practical Range as follows:

$$M(0) \leq M(t) \leq M(10)$$

Thus, $0 \leq M(t) \leq 150$ miles is your Practical Range.

This means you can bike a minimum of 0 miles and a maximum of 150 miles in this situation.
Problem 22 | YOU TRY – Applications of Functions

A local towing company charges $3.25 per mile driven plus a base fee of $30.00. They tow a maximum of 25 miles.

a) Let C represent the total cost of any tow and x represent miles driven. Using correct and formal function notation, write a function that represents total cost as a function of miles driven.

b) Identify the practical domain of this function by filling in the blanks below.

Minimum miles towed ≤ x ≤ Maximum miles towed

Practical Domain: _____________ ≤ x ≤ _____________

c) Identify the practical range of this function by filling in the blanks below.

Minimum Cost ≤ C(x) ≤ Maximum Cost

Practical Range: _____________ ≤ C(x) ≤ _____________

d) Write a complete sentence to explain the meaning of C(60) = 225 in words.

e) Use your function from part a) to find C(15). Write your answer as ordered pair then explain its meaning in a complete sentence.

f) Use your function from part a) to determine the value of x when C(x) = 30. Write your answer as ordered pair then explain its meaning in a complete sentence.
Problem 23 YOU TRY – Applications of Functions

The value $V$ (in dollars) of a washer/dryer set decreases as a function of time $t$ (in years). The function $V(t) = -100t + 1200$ models this situation. You own the washer/dryer set for 12 years.

a) Identify the input quantity (including units) and the input variable.

b) Identify the output quantity (including units) and the output variable.

c) Fill in the table below.

<table>
<thead>
<tr>
<th>$t$</th>
<th>0</th>
<th>6</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>$V(t)$</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

d) Draw a GOOD graph of this function in the space below. Provide labels for your axes. Plot and label the ordered pairs from part c). You may use the graphing feature of your calculator to help you.
e) A washer/dryer set that is worth $400 would be how old?
   *Hint: This is a GIVEN OUTPUT FIND INPUT question. You must show work.*

f) After 2 years, how much would the washer/dryer set be worth?
   *Hint: This is a GIVEN INPUT FIND OUTPUT question. You must show work.*

g) What is the practical domain for $V(t)$?

   Inequality notation: ____________________________________________

   Interval notation: ____________________________________________

h) What is the practical range for $V(t)$?

   Inequality notation: ____________________________________________

   Interval notation: ____________________________________________
Lesson 1 Practice Problems

Section 1.1: What is a Function?

1. The table below gives the distance D, in kilometers, of a GPS satellite from Earth \( t \) minutes after being launched.

<table>
<thead>
<tr>
<th>( t ) = Time (in minutes)</th>
<th>( D ) = Distance (in km)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>

</tr>
<tr>
<td>100</td>
<td>20,200</td>
</tr>
<tr>
<td>120</td>
<td>20,200</td>
</tr>
</tbody>
</table>

a) Identify the input quantity (include units). ____________________________________________

Identify the input variable. _____________________________________________________________

Identify the output quantity (include units). ______________________________________________

Identify the output variable. ____________________________________________________________

b) Write the data as a set of ordered pairs.

c) Interpret the meaning of the ordered pair (40, 9452).

d) Is distance of the satellite a function of time? Why or why not?

e) Is time a function of the distance of the satellite from Earth? Why or why not?
2. The table below gives the number of Gene copies, $G$, $t$ minutes after observation.

<table>
<thead>
<tr>
<th>$t$ = Time (in minutes)</th>
<th>$G$ = number of Gene Copies</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>52</td>
</tr>
<tr>

<tr>
<td>6</td>
<td>208</td>
</tr>
<tr>
<td>8</td>
<td>330</td>
</tr>
<tr>
<td>10</td>
<td>524</td>
</tr>
<tr>
<td>12</td>
<td>832</td>
</tr>
</tbody>
</table>

a) Identify the input quantity (include units).

Identify the input variable.

Identify the output quantity (include units).

Identify the output variable.

b) Write the data as a set of ordered pairs.

c) Interpret the meaning of the ordered pair (6, 208).

d) Is the number of Gene copies a function of time? Why or why not?

e) Is time a function of the number of Gene copies? Why or why not?
Lesson 1 – Introduction to Functions

Practice Problems

3. The table below gives the number of homework problems, $H$, that Tara has completed $t$ minutes after she began her homework.

<table>
<thead>
<tr>
<th>$t$ = Time (in minutes)</th>
<th>$H$ = number of homework problems completed</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>

<tr>
<td>7</td>
<td>50</td>
</tr>
<tr>
<td>9</td>
<td>63</td>
</tr>
<tr>
<td>10</td>
<td>68</td>
</tr>
</tbody>
</table>

a) Identify the input quantity (include units). ____________________________
   Identify the input variable. ____________________________
   Identify the output quantity (include units). ____________________________
   Identify the output variable. ____________________________

b) Write the data as a set of ordered pairs.

c) Interpret the meaning of the ordered pair (7, 50).

d) Is the number of hot dogs eaten a function of time? Why or why not?

e) Is time a function of the number of hot dogs eaten? Why or why not?
Lesson 1 – Introduction to Functions

Section 1.2: Multiple Representations of Functions

5. Determine whether the following sets of ordered pairs represent a functional relationship. Justify your answer.

a) \( R = \{(2, 4), (3, 8), (-2, 6)\} \)

b) \( T = \{(3, -2), (4, -1), (5, 8), (3, -2)\} \)

c) \( L = \{(3, -5), (1, -2), (2, -2), (3, 5)\} \)

d) \( A = \{(5, -5), (6, -5), (7, -5)\} \)

e) \( F = \{(2, -3), (6, \_), (4, 8)\} \)

6. Determine whether the following tables of values represent a functional relationship. Justify your answer.

a) \[
\begin{array}{c|c}
  x & f(x) \\
\hline
  3 & 0 \\
  1 & 5 \\
  2 & 8 \\
  3 & 12 \\
  4 & 14 \\
\end{array}
\]

b) \[
\begin{array}{c|c}
  x & g(x) \\
\hline
  0 & 0 \\
  1 & 1 \\
  2 & -1 \\
  3 & 2 \\
  4 & -2 \\
\end{array}
\]

c) \[
\begin{array}{c|c}
  x & f(x) \\
\hline
  0 & -3 \\
  1 & -4 \\
  2 & -5 \\
  3 & \_ \\
  4 & -6 \\
\end{array}
\]
7. Determine whether the following graphs represent a functional relationship. Justify your answer.

\begin{center}
\begin{tabular}{|c|c|c|c|c|}
\hline
r & -1 & 1 & 2 & 1 \\
\hline
h(r) & 3 & 5 & 3 & 5 \\
\hline
\end{tabular}
\end{center}

\begin{center}
\begin{tabular}{|c|c|c|c|c|}
\hline
s & 0 & 1 & 2 & 3 & 4 \\
\hline
h(s) & 5 & 10 & 15 & 25 \\
\hline
\end{tabular}
\end{center}

\begin{center}
\begin{tabular}{|c|c|c|c|}
\hline
t & 0 & 1 & 2 \\
\hline
p(t) & 43 & 45 & 43 \\
\hline
\end{tabular}
\end{center}

\begin{center}
\begin{tabular}{|c|c|c|c|c|}
\hline
s & -1 & -1 & -1 & -1 \\
\hline
\tau(s) & 8 & 12 & -4 & -9 \\
\hline
\end{tabular}
\end{center}
8) Determine whether the following scenarios represent functions. Explain your choice for each of the following. Remember when the word “function” is used, it is in a purely MATHEMATICAL sense, not in an everyday sense.

a) Is a person’s height a function of their age?

b) Is a person’s age a function of their date of birth?

c) Is the growth of a tree a function of the monthly rainfall?

d) John says that time he will spend on vacation will be determined by the number of overtime hours he works on his job. Is it true that his vacation time is a function of his overtime hours?

e) Sara says that the number of tomatoes she grows will be determined by the weather. Is it true that the size of his tomato crop is a function of the weather?

9. Determine whether the following functions represented by the graphs below are increasing, decreasing, or constant.
10. Determine whether the following functions represented by the tables below are increasing, decreasing, or constant.

\[
\begin{array}{c|c}
 x & f(x) \\
\hline
-2 & 5 \\
-1 & 8 \\
0 & 23 \\
1 & 37 \\
2 & 49 \\
\end{array}
\]

\[
\begin{array}{c|c}
 t & s(t) \\
\hline
4 & 5 \\
7 & 3 \\
12 & -8 \\
13 & -12 \\
17 & -25 \\
\end{array}
\]

\[
\begin{array}{c|c}
 x & g(x) \\
\hline
0 & 5 \\
1 & 5 \\
2 & 5 \\
3 & 5 \\
4 & 5 \\
\end{array}
\]

\[
\begin{array}{c|c|c|c|c}
 x & h(x) & 0 & 1 & 2 & 3 \\
\hline
 & & 2 & 2 & 2 & 2 \\
\end{array}
\]

\[
\begin{array}{c|c|c|c|c}
 x & h(x) & -5 & 1 & 8 & 9 \\
\hline
 & & 27 & 26 & 24 & 23 \\
\end{array}
\]

\[
\begin{array}{c|c|c|c|c}
 x & h(x) & 0 & 1 & 2 & 3 \\
\hline
 & & -22 & -20 & -18 & -15 \\
\end{array}
\]

Section 1.3: Function Evaluation

11. Given the function \( f(x) = -x + 6 \), evaluate each of the following

a) \( f(2) = \)

b) \( f(-1) = \)

c) \( f(0) = \)
12. Given the function \( s(t) = 14 - 2t \), evaluate each of the following:
   a) \( s(-3) = \)

   b) \( s(4) = \)

   c) \( s(0) = \)

13. Given the function \( h(c) = 2c^2 - 3c + 4 \), evaluate each of the following:
   a) \( h(-2) = \)

   b) \( h(3) = \)

   c) \( h(0) = \)

14. Given the function \( g(x) = -x^2 + 3x \), evaluate each of the following:
   a) \( g(-3) = \)

   b) \( g(4) = \)

   c) \( g(0) = \)
15. Given the function \( f(x) = -x + 6 \), evaluate each of the following:
   a) \( f(2x) = \)

   b) \( f \left( \frac{1}{2} x \right) = \)

   c) \( f(x - 3) = \)

16. Given the function \( s(t) = 14 - 2t \), evaluate each of the following:
   a) \( s(3t) = \)

   b) \( s \left( \frac{1}{4} t \right) = \)

   c) \( s(t + 4) = \)
17. Given the function \( h(c) = 2c^2 - 3c + 4 \), evaluate each of the following:
   
   a) \( h(-2c) = \)

   b) \( h(c - 1) = \)

   c) \( h(x + 2) = \)

18. Given \( f(x) = 3x - 6 \), determine each of the following. Also determine if you are given an input or output and whether you are finding an input or output and write your result as an ordered pair.
   
   a) Find \( f(2) = \)

   b) Find \( x \) if \( f(x) = 3 \)

   Given input or output?______________

   Finding input or output?______________

   Ordered pair:______________________

   Given input or output?______________

   Finding input or output?______________

Section 1.5: Applications of Functions

29. A local window washing company charges $0.50 per window plus a base fee of $20.00 per appointment. They can wash a maximum of 200 windows per appointment.

a) Let \( C \) represent the total cost of an appointment and \( w \) represent the number of windows washed. Using correct and formal function notation, write a function that represents total cost as a function of windows washed.

b) Identify the practical domain of this function by filling in the blanks below.

Minimum windows washed \( \leq w \leq \) Maximum windows washed

Practical Domain: \( \) \( \leq w \leq \)

c) Identify the practical range of this function by filling in the blanks below.

Minimum Cost \( \leq C(w) \leq \) Maximum Cost

Practical Range: \( \) \( \leq C(w) \leq \)

d) Enter the equation for \( C \) into the Y= part of your calculator. Then use the TABLE feature to complete the table below:

<table>
<thead>
<tr>
<th>( w )</th>
<th>0</th>
<th>50</th>
<th>150</th>
<th>200</th>
</tr>
</thead>
<tbody>
<tr>
<td>( C(w) )</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

e) Use the TABLE to determine the value of \( C(50) \). Circle the appropriate column in the table. Write a sentence explaining the meaning of your answer.

f) Use the TABLE to determine \( w \) when \( C(w) = 45 \). Circle the appropriate column. Write a sentence explaining the meaning of your answer.

g) Use your FUNCTION from part a) to determine the value of \( w \) when \( C(w) = 45 \). Set up the equation, \( C(w) = 45 \) then solve for the value of \( w \).
30. Suppose the number of pizzas you can make in an 8 hour day is determined by the function \( P(t) = 12t \) where \( P \) is the output (Pizzas made) and \( t \) is the input (Time in hours).

a) Graph this function using your calculator. [Go to Y= and type 12x into the Y1 slot. Then, press WINDOW and enter xmin = 0, xmax = 8, ymin = 0, and ymax = 96 then press GRAPH]. Show a good graph in the space below.

![Graph](image)

b) Use the Table feature of your graph and identify the first and last ordered pairs that are on the graph (based on the information above). [2nd>Graph will take you to the table]. Include both ordered pairs and function notation.

c) What is the INPUT quantity (including units) for this function? Name the smallest and largest possible input quantity then use this information to identify the PRACTICAL DOMAIN.

Input quantity (including units): ________________________________

Practical domain:

Inequality notation: ________________________________

Interval notation: ________________________________
Lesson 1 – Introduction to Functions

Practice Problems

d) What is the OUTPUT quantity (including units) for this function? Name the smallest and largest possible output quantity then use this information to identify the PRACTICAL RANGE.

Output quantity (including units):_______________________________

Practical range:

Inequality notation:_______________________

Interval notation:_________________________

e) Find $P(3)$ and interpret its meaning in the context of the problem.

f) Find $t$ so that $P(t) = 70$ and interpret its meaning in the context of the problem.
31. The life expectancy for males in the United States from the year 1900 until 2020 can be modeled by the function $L(x) = 0.27x + 48.3$, where $L$ is the life expectancy and $x$ is the number of years since 1900.

a) Which letter, $L$ or $x$ is used for input?

b) What does the INPUT represent? Include units.

c) Which letter, $L$ or $x$, is used for output?

d) What does the OUTPUT represent? Include units.

e) Draw a neat, labeled and accurate sketch of this graph in the space below.

<table>
<thead>
<tr>
<th>$x$</th>
<th>$L(x)$</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td></td>
</tr>
<tr>
<td>20</td>

</tr>
<tr>
<td>120</td>
<td></td>
</tr>
</tbody>
</table>

f) What is the practical domain of $L(x)$? Use proper inequality notation.
g) What is the practical range of $L(x)$? Use proper inequality notation.

h) What is the life expectancy of a man born in Iowa in 1950?

i) If a man is expected to live to the age of 60, approximate the year he was born. (Round to one decimal place)?
Lesson 1 Assessment

1. Let \( r(a) = 4 - 5a \). Show all steps. Write each answer using function notation and as an ordered pair.
   a) Determine \( r(-2) \).
   b) For what value of \( a \) is \( r(a) = 19 \)?

2. The graph of \( f(x) \) is given below. Use inequality notation.
   a) Give the domain of \( f(x) \):
   b) Give the range of \( f(x) \):
   c) \( f(0) = \) __________
   d) \( f(x) = 0 \) when \( x = \) ______________

3. Consider the following table of values. Fill in the blanks below, and identify the corresponding ordered pairs.

<table>
<thead>
<tr>
<th>( x )</th>
<th>-2</th>
<th>-1</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>( g(x) )</td>
<td>1</td>
<td>4</td>
<td>2</td>
<td>6</td>
<td>5</td>
<td>0</td>
<td>2</td>
</tr>
</tbody>
</table>

\( g(1) = \) __________, \( g(x) = 1 \) when \( x = \) __________, \( g(x) = 2 \) when \( x = \) ______________
4. The height, \( h \) (in feet), of a golf ball is a function of the time, \( t \) (in seconds), it has been in flight. A golfer strikes the golf ball with an initial upward velocity of 96 feet per second. The maximum height of the ball is 144 feet. The height of the ball above the ground is given by the function \( h(t) = -16t^2 + 96t \).

a) Use the TABLE feature on your graphing calculator to complete the table below.

<table>
<thead>
<tr>
<th>( t )</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>( h(t) )</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

b) Determine \( h(3) \). Write a sentence explaining the meaning of your answer.

c) For what values of \( t \) is \( h(t) = 0 \)? Explain the meaning of your answers.

d) Determine the practical domain. Use inequality notation and include units.

e) Determine the practical range. Use inequality notation and include units.

f) Use your graphing calculator to generate a graph of \( h(t) \). Use the practical domain and range to determine a “good” viewing window. In the space below, sketch what you see on your calculator screen, and write down the viewing window you used.

Xmin=____
Xmax=____
Ymin=____
Ymax=____
Lesson 2 – Functions and Function Operations

As we continue to work with more complex functions it is important that we are comfortable with Function Notation, operations on Functions and operations involving more than one function. In this lesson, we study using proper Function Notation and then spend time learning how add, subtract, multiply and divide Functions, both algebraically and when the functions are represented with a tables or graphs. Finally, we take a look at a couple of real world examples that involve operations on functions.

Lesson Topics:

Section 2.1: Combining Functions
- Basic operations: Addition, Subtraction, Multiplication, and Division
- Multiplication Property of Exponents
- Division Property of Exponents
- Negative Exponents
- Working with functions in table form
- Working with functions in graph form

Section 2.2: Applications of Function Operations
- Cost, Revenue, and Profit

Section 2.3: Composition of Functions
- Evaluating Functions
- Working with functions in table form

Section 2.4: Applications of Function Composition

Section 2.5: Scientific Notation

Mini-Lesson 2

Section 2.1 – Combining Functions

Function notation can be expanded to include notation for the different ways we can combine functions as described below.

### Basic Mathematical Operations

The basic mathematical operations are: addition, subtraction, multiplication, and division. When working with function notation, these operations will look like this:

<table>
<thead>
<tr>
<th>Operation</th>
<th>Notation</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Addition</td>
<td>( f(x) + g(x) )</td>
<td>( f(x) + g(x) = (2x^2 + 3x - 5) + (-x^2 + 5x + 1) )</td>
</tr>
<tr>
<td>Subtraction</td>
<td>( f(x) - g(x) )</td>
<td>( f(x) - g(x) = 2x^2 + 3x - 5 + x^2 - 5x - 1 )</td>
</tr>
<tr>
<td>Multiplication</td>
<td>( f(x) \cdot g(x) )</td>
<td>( f(x) \cdot g(x) = 3x^2 - 2x - 6 )</td>
</tr>
<tr>
<td>Division</td>
<td>( \frac{f(x)}{g(x)} )</td>
<td>( \frac{f(x)}{g(x)} = \frac{2(1)^2 + 3(1) - 5}{-1 + 5 + 1} )</td>
</tr>
</tbody>
</table>

Many of the problems we will work in this lesson are problems you may already know how to do. You will just need to get used to some new notation.

We will start with the operations of addition and subtraction.

#### Problem 1 [WORKED EXAMPLE – Adding and Subtracting Functions]

Given \( f(x) = 2x^2 + 3x - 5 \) and \( g(x) = -x^2 + 5x + 1 \).

a) Find \( f(x) + g(x) \)

\[
\begin{align*}
f (x) + g(x) &= (2x^2 + 3x - 5) + (-x^2 + 5x + 1) \\
&= 2x^2 + 3x - 5 - x^2 + 5x + 1 \\
&= 2x^2 - x^2 + 3x + 5x - 5 + 1 \\
f(x) + g(x) &= x^2 + 8x - 4
\end{align*}
\]

b) Find \( f(x) - g(x) \)

\[
\begin{align*}
f (x) - g(x) &= (2x^2 + 3x - 5) - (-x^2 + 5x + 1) \\
&= 2x^2 + 3x - 5 + x^2 - 5x - 1 \\
&= 2x^2 + x^2 + 3x - 5x - 5 - 1 \\
f(x) - g(x) &= 3x^2 - 2x - 6
\end{align*}
\]

c) Find \( f(1) - g(1) \)

\[
\begin{align*}
f (1) - g(1) &= [2(1)^2 + 3(1) - 5] - \left[-(1)^2 + 5(1) + 1\right] \\
&= (2 + 3 - 5) - (-1 + 5 + 1) \\
&= 0 - 5 \\
f(1) - g(1) &= -5
\end{align*}
\]
Problem 2 | MEDIA EXAMPLE – Adding and Subtracting Functions

Given $f(x) = 3x^2 + 2x - 1$ and $g(x) = x^2 + 2x + 5$:

a) Find $f(x) + g(x)$

b) Find $f(x) - g(x)$

Problem 3 | YOU TRY – Adding and Subtracting Functions

Given $f(x) = x^2 + 4$ and $g(x) = x^2 + 1$, determine each of the following. Show complete work.

a) Find $f(2) + g(2)$

b) Find $f(x) - g(x)$

c) Find $f(2) - g(2)$
Function Multiplication and the Multiplication Property of Exponents

When multiplying functions, you will often need to work with exponents. The following should be familiar to you and will come into play in the examples below:

**MULTIPLICATION PROPERTY OF EXPONENTS**

Let $m$ and $n$ be rational numbers. To multiply powers of the same base, keep the base and add the exponents:

$$a^m \cdot a^n = a^{m+n}$$

<table>
<thead>
<tr>
<th>Problem 4</th>
<th>WORKED EXAMPLE – Function Multiplication</th>
</tr>
</thead>
</table>

a) Given $f(x) = -8x^4$ and $g(x) = 5x^3$, find $f(x) \cdot g(x)$

$$f(x) \cdot g(x) = (-8x^4)(5x^3) = (-8)(5)(x^4)(x^3) = (-40)(x^{4+3}) = -40x^7$$

Reorder using Commutative Property

Simplify using the Multiplication Property of Exponents

Final Result

b) Given $f(x) = -3x$ and $g(x) = 4x^2 - x + 8$, find $f(x) \cdot g(x)$

$$f(x) \cdot g(x) = (-3x)(4x^2 - x + 8) = (-3x)(4x^2) + (-3x)(-x) + (-3x)(8)$$

Apply the Distributive Property

Remember the rules of exp.

$(-3x)(4x^2) = (-3)(4)(x^1)(x^2)$

$= -12x^3$

Final Result

c) Given $f(x) = 3x + 2$ and $g(x) = 2x - 5$, find $f(x) \cdot g(x)$

$$f(x) \cdot g(x) = (3x + 2)(2x - 5) = (3x)(2x) + (3x)(-5) + (2)(2x) + (2)(-5)$$

Use FOIL

Remember the rules of exp.

$(3x)(2x) = (3)(2)(x)(x)$

$= 6x^2$

Combine Like Terms

$= 6x^2 - 11x - 10$

Final Result
Problem 5 | MEDIA EXAMPLE – Function Multiplication

Given \( f(x) = 3x + 2 \) and \( g(x) = 2x^2 + 3x + 1 \), find \( f(x) \cdot g(x) \)

Problem 6 | YOU TRY – Function Multiplication

For each of the following, find \( f(x) \cdot g(x) \)

a) \( f(x) = 3x - 2 \) and \( g(x) = 3x + 2 \)

b) \( f(x) = 2x^2 \) and \( g(x) = x^3 - 4x + 5 \)

c) \( f(x) = 4x^3 \) and \( g(x) = -6x \)
Function Division and the Division Property of Exponents

When dividing functions, you will also need to work with exponents of different powers. The following should be familiar to you and will come into play in the examples below:

**DIVISION PROPERTY OF EXPONENTS**
Let \( m, n \) be rational numbers. To divide powers of the same base, keep the base and subtract the exponents.

\[
\frac{a^m}{a^n} = a^{m-n} \quad \text{where} \quad a \neq 0
\]

**Problem 7 | WORKED EXAMPLE – Function Division**

For each of the following, find \( \frac{f(x)}{g(x)} \). Use only positive exponents in your final answer.

a) \( f(x) = 15x^{15} \) and \( g(x) = 3x^9 \)

\[
\frac{f(x)}{g(x)} = \frac{15x^{15}}{3x^9} = 5x^{15-9} = 5x^6
\]

b) \( f(x) = -4x^5 \) and \( g(x) = 2x^8 \)

\[
\frac{f(x)}{g(x)} = \frac{-4x^5}{2x^8} = -2x^{5-8} = -2x^{-3} = -\frac{2}{x^3}
\]
### Problem 8 MEDIA EXAMPLE – Function Division

For each of the following, determine \( \frac{f(x)}{g(x)} \). Use only positive exponents in your final answer.

a) \( f(x) = 10x^4 + 3x^2 \) and \( g(x) = 2x^2 \)

b) \( f(x) = -12x^5 + 8x^2 + 5 \) and \( g(x) = 4x^2 \)

### Problem 9 YOU TRY – Function Division

For each of the following, determine \( \frac{f(x)}{g(x)} \). Use only positive exponents in your final answer.

a) \( f(x) = 25x^5 - 4x^2 \) and \( g(x) = -5x^4 \)

b) \( f(x) = 20x^6 - 16x^3 + 8 \) and \( g(x) = -4x^3 \)
Functions can be presented in multiple ways including: equations, data sets, graphs, and applications. If you understand function notation, then the process for working with functions is the same no matter how the information is presented.

**Problem 10**  **MEDIA EXAMPLE – Working with Functions in Table Form**

Functions \( f(x) \) and \( g(x) \) are defined in the tables below. Find a – e below using the tables.

<table>
<thead>
<tr>
<th>( x )</th>
<th>-3</th>
<th>-2</th>
<th>0</th>
<th>1</th>
<th>4</th>
<th>5</th>
<th>8</th>
<th>10</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>( f(x) )</td>
<td>8</td>
<td>6</td>
<td>3</td>
<td>2</td>

<td>3</td>
<td>5</td>
<td>10</td>
<td>4</td>
<td>2</td>
<td>0</td>
<td>-2</td>
<td>-5</td>
</tr>
</tbody>
</table>

a) \( f(1) = \)
b) \( g(9) = \)
c) \( f(0) + g(0) = \)
d) \( g(5) - f(8) = \)
e) \( f(0) \cdot g(3) = \)

**Problem 11**  **YOU TRY – Working with Functions in Table Form**

Given the following two tables, complete the third table. Show work in the table cell for each column. The first one is done for you.

<table>
<thead>
<tr>
<th>( x )</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>( f(x) )</td>
<td>4</td>

<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>( g(x) )</td>
<td>6</td>
<td>-3</td>
<td>4</td>
<td>-2</td>
<td>2</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>( f(x) + g(x) )</th>
<th>( f(0) + g(0) = 4 + 6 = 10 )</th>
<th>( f(1) + g(1) )</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
You remember that graphs are just infinite sets of ordered pairs and if you do a little work ahead of time (as in the example below) then the graphing problems are a lot easier to work with.

**Problem 12 | YOU TRY – Working with Functions in Graph Form**

Use the graph to determine each of the following. Assume integer answers. The graph of g is the graph in bold.

Complete the following ordered pairs from the graphs above. Use the information to help you with the problems below. The first ordered pair for each function has been completed for you.

| f: | (–7, 2), (–6, ), (–5, ), (–4, ), (–3, ), (–2, ), (–1, ), (0, ), (1, ), (2, ), (3, ), (4, ), (5, ), (6, ), (7, ) |
| g: | (–7, 3), (–6, ), (–5, ), (–4, ), (–3, ), (–2, ), (–1, ), (0, ), (1, ), (2, ), (3, ), (4, ), (5, ), (6, ), (7, ) |

a) \( g(4) = \) __________________________  
b) \( f(2) = \) __________________________

c) \( g(0) = \) __________________________  
d) \( f(-6) = \) __________________________

e) If \( f(x) = 0 \), \( x = \) __________________________  
f) If \( g(x) = 0 \), \( x = \) __________________________

g) If \( f(x) = 1 \), \( x = \) __________________________  
h) If \( g(x) = -4 \), \( x = \) __________________________

i) \( f(-1) + g(-1) = \) __________________________  
j) \( g(-6) - f(-6) = \) __________________________

k) \( f(1) \times g(-2) = \) __________________________  
l) \( \frac{g(6)}{f(-1)} = \) __________________________
One of the classic applications of function operations is the forming of the Profit function, \( P(x) \) by subtracting the cost function, \( C(x) \), from the revenue function, \( R(x) \) as shown below.

\[
\text{Profit} = \text{Revenue} - \text{Cost}
\]

Given functions \( P(x) = \text{Profit} \), \( R(x) = \text{Revenue} \), and \( C(x) = \text{Cost} \):

\[
P(x) = R(x) - C(x)
\]

**Problem 13**  
**MEDIA EXAMPLE – Cost, Revenue, Profit**

A local courier service estimates its monthly operating costs to be $1500 plus $0.85 per delivery. The service generates revenue of $6 for each delivery. Let \( x \) = the number of deliveries in a given month.

a) Write a function, \( C(x) \), to represent the monthly costs for making \( x \) deliveries per month.

b) Write a function, \( R(x) \), to represent the revenue for making \( x \) deliveries per month.

c) Write a function, \( P(x) \), that represents the monthly profits for making \( x \) deliveries per month.

d) Determine algebraically the break-even point for the function \( P(x) \) and how many deliveries you must make each month to begin making money. Show complete work. Write your final answer as a complete sentence.

e) Determine the break-even point graphically by solving the equation \( P(x) = 0 \). Explain your work and show the graph with appropriate labels. Write your final answer as a complete sentence.
Problem 14  YOU TRY – Cost, Revenue, Profit

February is a busy time at Charlie’s Chocolate Shoppe! During the week before Valentine’s Day, Charlie advertises that his chocolates will be selling for $1.80 a piece (instead of the usual $2.00 each). The fixed costs to run the Chocolate Shoppe total $450 for the week, and he estimates that each chocolate costs about $0.60 to produce. Charlie estimates that he can produce up to 3,000 chocolates in one week.

a) Write a function, \( C(n) \), to represent Charlie’s total costs for the week if he makes \( n \) chocolates.

b) Write a function, \( R(n) \), to represent the revenue from the sale of \( n \) chocolates during the week before Valentine’s Day.

c) Write a function, \( P(n) \), that represents Charlie’s profit from selling \( n \) chocolates during the week before Valentine’s Day. Show complete work to find the function.

d) Interpret the meaning of the statement \( P(300) = -90 \).

e) Determine the Practical Domain and Practical Range for \( P(n) \), then use that information to define an appropriate viewing window for the graph of \( P(n) \). Sketch the graph from your calculator in the space provided.

Practical Domain:

Practical Range:

f) How many chocolates must Charlie sell in order to break even? Show complete work. Write your final answer as a complete sentence. Mark the break even point on the graph above.
Section 2.3 – Composition of Functions

Composition of Functions

Function Composition is the process by which the OUTPUT of one function is used as the INPUT for another function. Two functions \( f(x) \) and \( g(x) \) can be composed as follows:

\[
\begin{align*}
    f(g(x)) & , \text{ where the function } g(x) \text{ is used as the INPUT for the function } f(x) . \\
    
    OR

    g(f(x)) & , \text{ where the function } f(x) \text{ is used as the INPUT for the function } g(x) .
\end{align*}
\]

Problem 15  WORKED EXAMPLE – Composition of Functions

Let \( f(x) = 5 - x \) and \( g(x) = 3x + 4 \). Evaluate each \( f(g(x)) \), \( g(f(x)) \), and \( f(g(7)) \).

\[
\begin{align*}
    f(g(x)) & = f(3x + 4) \\
    & = 5 - (3x + 4) \\
    & = 5 - 3x - 4 \\
    & = -3x + 1
\end{align*}
\]

\[
\begin{align*}
    g(f(x)) & = g(5 - x) \\
    & = 3(5 - x) + 4 \\
    & = 15 - 3x + 4 \\
    & = -3x + 19
\end{align*}
\]

To evaluate \( f(g(7)) \), always start with the “inside” function. In this case, \( g(7) \).

\[
\begin{align*}
    g(7) & = 3(7) + 4 \\
    & = 21 + 4 \\
    & = 25
\end{align*}
\]

Then plug this result (output) into \( f(x) \).

\[
\begin{align*}
    f(g(7)) & = f(25) \\
    & = 5 - (25) \\
    & = -20
\end{align*}
\]
Problem 16  

| MEDIA EXAMPLE – Composition of Functions |

Let \( A(x) = 2x + 1 \) and \( B(x) = 3x – 5 \). Evaluate each of the following.

\[
A(B(x)) = \quad B(A(x)) =
\]

\[
A(B(4)) = \quad B(A(4)) =
\]

Problem 17  

| YOU TRY – Composition of Functions |

Let \( f(x) = 4 – 3x \) and \( g(x) = x – 8 \). Evaluate each of the following.

a) \( f(g(x)) = \quad b) \quad g(f(5)) = \)
Problem 18  MEDIA EXAMPLE – Composition of Functions Given in Table Form

The functions \( f(x) \) and \( g(x) \) are defined by the tables below.

\[
\begin{array}{cccccccccccc}
 x & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\
 f(x) & 4 & 11 & 10 & 8 & 6 & 5 & 8 & 2 & 6 & 9 \\
\end{array}
\]

\[
\begin{array}{cccccccccccc}
 x & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\
 g(x) & 3 & 8 & 4 & 10 & 2 & 5 & 11 & 0 & 4 & 1 \\
\end{array}
\]

\[f(g(5)) = \quad f(g(1)) =\]

\[g(f(4)) = \quad f(f(1)) =\]

Problem 19  YOU TRY – Composition of Functions Given in Table Form

The functions \( A(x) \) and \( B(x) \) are defined by the tables below.

\[
\begin{array}{cccccccccccc}
 x & 0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\
 A(x) &  5 &  7 &  3 &  6 &  1 &  2 &  6 &  11 &  3 &  \ \\
\end{array}
\]

\[
\begin{array}{cccccccccccc}
 x & 0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\
 B(x) &  0 &  1 &  2 &  3 &  4 &  5 &  6 &  3 &  15 &  \\
\end{array}
\]

a) \( A(B(4)) = \) 

b) \( B(A(1)) = \)

c) \( B(A(7)) = \)

d) \( A(B(1)) = \)
Section 2.4 – Applications of Function Composition

Lisa makes $18 per hour at her new part-time job.

a) Write a function, $I$, to represent Lisa’s income for the week if she works $h$ hours. Complete the table below.

$$I(h) = \underline{\text{__________________________}}$$

<table>
<thead>
<tr>
<th>$h$</th>
<th>5</th>
<th>10</th>
<th>15</th>
<th>20</th>
</tr>
</thead>
<tbody>
<tr>
<td>$I(h)$</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

b) Lisa puts 10% of her salary in her bank savings every week and $10 into her piggy bank for a rainy day. Write a function, $S$, to represent the total amount of money she saves each week if her income is $I$ dollars. Complete the table below.

$$S(I) = \underline{\text{__________________________}}$$

<table>
<thead>
<tr>
<th>$I$</th>
<th>90</th>
<th>180</th>
<th>270</th>
<th>360</th>
</tr>
</thead>
<tbody>
<tr>
<td>$S(I)$</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

c) Using the information above, write a formula for $S(I(h))$ and complete the table below.

$$S(I(h)) = \underline{\text{__________________________}}$$

<table>
<thead>
<tr>
<th>$h$</th>
<th>5</th>
<th>10</th>
<th>15</th>
<th>20</th>
</tr>
</thead>
<tbody>
<tr>
<td>$S(I(h))$</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

d) What information does the function $S(I(h))$ provide in this situation? Be sure to identify the input and output quantities.

e) Interpret the meaning of the statement $S(I(10)) = 28$. Include all appropriate units.
Problem 21   YOU TRY – Applications of Function Composition

A resort hotel in Scottsdale, AZ charges $1800 to rent a reception hall, plus $58 per person for dinner and open bar. The reception hall can accommodate up to 200 people.

a) Write a function, $T$, to represent the total cost to rent the reception hall if $n$ people attend the reception.

$$T(n) = \text{________________________}$$

b) During the summer months, the hotel offers a discount of 15% off the total bill, $T$. Write a function, $D$, to represent the discounted cost if the total bill was $T$.

$$D(T) = \text{________________________}$$

c) Using the information above, write a formula for $D(T(n))$ and complete the table below.

$$D(T(n)) = \text{________________________}$$

<table>
<thead>
<tr>
<th>$n$</th>
<th>0</th>
<th>50</th>
<th>100</th>
<th>150</th>
<th>200</th>
</tr>
</thead>
<tbody>
<tr>
<td>D(T(n))</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

d) What information does the function $D(T(n))$ provide in this situation? Be sure to identify the input and output quantities.

e) Interpret the meaning of the statement $D(T(100)) = 6460$. Include all appropriate units.

f) Determine the maximum number of people that can attend the reception for $5,000 (after the discount is applied)?
Lesson 2 Practice Problems

Section 2.1: Combining Functions

1. Let \( f(x) = -3x + 2 \) and \( g(x) = x^2 + 4x - 7 \).
   Find the following and simplify your result.

   a) \( f(4) + g(4) = \)

   b) \( g(-3) - f(-3) = \)

   c) \( f(2) \cdot g(2) = \)

   d) \( \frac{g(0)}{f(0)} = \)
2. Let \( f(x) = 2x - 4 \) and \( g(x) = x^2 - 9 \). Find the following.
   a) \( f(x) + g(x) = \)
   
   b) \( g(x) - f(x) = \)
   
   c) \( f(x) \cdot g(x) = \)
   
   d) \( \frac{g(x)}{f(x)} = \)

3. Add, subtract and multiply the following functions. Simplify your answers.

   a) \( f(x) = -4x + 7 \) and \( g(x) = -3x \)

   \[
   f(x) + g(x) = \quad f(x) - g(x) =
   \]

   \[
   f(x) \cdot g(x) = \quad g(x) - f(x) =
   \]
Lesson 2 – Functions and Function Operations

Practice Problems

b) \( f(x) = -x + 2 \) and \( g(x) = -3x + 7 \)

\[
f(x) + g(x) = \quad f(x) - g(x) =
\]

\[
f(x) \cdot g(x) = \quad g(x) - f(x) =
\]

c) \( f(x) = 3x^2 + 4x + 2 \) and \( g(x) = 6x + 1 \)

\[
f(x) \cdot g(x) = \quad f(4) + g(-1) =
\]

4. Simplify each of the following functions. Use only positive exponents in your final answer.

a) \( f(x) = 32x^4 - 3x^7 \) and \( g(x) = 6x^4 \)

\[
\frac{f(x)}{g(x)} =
\]

b) \( f(x) = 48x^9 - 16x^3 + 4 \) and \( g(x) = -8x^3 \)

\[
\frac{f(x)}{g(x)} =
\]
5. Use the tables of the functions below, find the following.

<table>
<thead>
<tr>
<th>x</th>
<th>-2</th>
<th>-1</th>
<th>0</th>
<th>1</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>f(x)</td>
<td>-3</td>
<td>0</td>
<td>4</td>
<td>9</td>
<td>15</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>x</th>
<th>-2</th>
<th>-1</th>
<th>0</th>
<th>1</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>g(x)</td>
<td>12</td>
<td>8</td>
<td>1</td>
<td>-3</td>
<td>-5</td>
</tr>
</tbody>
</table>

a) \( f(2) + g(2) = \)

b) \( g(-1) - f(-1) = \)

c) \( f(0) \cdot g(0) = \)

d) \( \frac{g(1)}{f(1)} = \)

6. Functions \( f(x) \) and \( g(x) \) are defined in the tables below. Use those tables to evaluate problems the problems below.

<table>
<thead>
<tr>
<th>x</th>
<th>-3</th>
<th>-2</th>
<th>0</th>
<th>1</th>
<th>4</th>
<th>5</th>
<th>8</th>
<th>10</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>f(x)</td>
<td>8</td>
<td>6</td>
<td>3</td>
<td>2</td>
<td>5</td>
<td>8</td>
<td>11</td>
<td>15</td>
<td>20</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>x</th>
<th>0</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>8</th>
<th>9</th>
<th>11</th>
<th>15</th>
</tr>
</thead>
<tbody>
<tr>
<td>g(x)</td>
<td>1</td>
<td>3</td>
<td>5</td>
<td>10</td>
<td>4</td>
<td>2</td>
<td>0</td>
<td>-2</td>
<td>-5</td>
</tr>
</tbody>
</table>

a) \( f(5) = \)

b) \( g(5) = \)

c) \( f(5) + g(5) = \)

d) \( f(0) - g(0) = \)

e) \( f(8) \cdot g(8) = \)

f) \( f(4) \cdot g(0) = \)
7. Use the graph to determine each of the following. Assume integer answers.

\[
\begin{array}{cc}
\hline
f(x) & g(x) \\
\hline
\end{array}
\]

\[f(0) + g(0) = \]

\[f(1) - g(3) = \]

\[f(-2) \cdot g(5) = \]

\[f(-1) \cdot g(2) = \]

8. Functions \( f \) and \( g \) are defined below. Use those functions to evaluate the problems below.

\[f = \{(-3,4), (-2,6), (-1,8), (0,6), (1,-2)\} \quad g = \{(-1,8), (0,2), (4,3), (8,4)\}\]

\[a) \ f(-2) + g(0) = \]

\[b) \ f(1) - g(4) = \]

\[c) \ f(0) \cdot g(0) = \]

\[d) \ f(-1) \cdot g(8) = \]
Section 2.2: Applications of Function Operations

9. The function $E(n)$ represents Ellen’s budgeted monthly expenses for the first half of the year 2013. In the table, $n = 1$ represents January 2013, $n = 2$ February 2013, and so on.

<table>
<thead>
<tr>
<th>$n$</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>$E(n)$</td>
<td>2263</td>
<td>2480</td>
<td>2890</td>
<td>2263</td>
<td>2352</td>
<td>2550</td>
</tr>
</tbody>
</table>

The function $L(n)$ shown in the table below represents Ellen’s monthly income for the first half of the year 2013. In the table, $n = 1$ represents January 2013, $n = 2$ February 2013, and so on.

<table>
<thead>
<tr>
<th>$n$</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>$L(n)$</td>
<td>2850</td>
<td>2850</td>
<td>2850</td>
<td>2850</td>
<td>2850</td>
<td>2850</td>
</tr>
</tbody>
</table>

a) At the end of each month, Ellen puts any extra money into a savings account. The function $S(n)$ represents the amount of money she puts into savings each month. Using the information above, complete the following table for the function $S(n)$.

<table>
<thead>
<tr>
<th>$n$</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>$S(n)$</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

b) Her goal is to save enough money to take a trip to Hawaii in July, 2013. She estimates that the trip will cost $2000. Will she be able to save up enough money to go to Hawaii in July? If so, how much extra money will he have to spend while she is there? If not, how much more does she need to earn?
10. Maria and Todd are organizing the 20 year reunion for their high school. The high school alumni association has given them $1000 for the event. They talk to the local caterer and find out the following:
   - It will cost $15 per person plus a $50 setup fee to provide food for the event.
   - It will cost $3 per person plus an $80 setup fee to rent the Meeting Hall at the local Holiday Motel.

To help determine the costs, they come up with the following functions:
   - The cost for food is $50 + $15 per person. \( F(x) = 15x + 50 \)
   - The cost for the Hall is $80 + $3 per person \( H(x) = 3x + 80 \)

In addition, they decide to charge each person $5 to get in the door. This can be modeled by the following function:
   - Income for the event is $1000 from the alumni + $5 per person. \( I(x) = 5x + 1000 \)

Given this information, answer the following questions. Show how you use the functions to calculate the answers. And give your final answers in complete sentences.

If 400 people attend the event:

a) How much will it cost for food?

b) How much will it cost to rent the Meeting Hall?

c) How much will it cost for food AND to rent the Meeting Hall? Show how you use the functions to calculate this. Hint: \( F(400) + H(400) \)

d) The final bill for the event is found by subtracting the costs from the income. What would the final bill for the event be?

e) Challenge question. How many people can attend if the costs have to equal the income?
11. Leonard has started a new business making cartoon bedspreads. His monthly expenses are $1322. Each bedspread costs $8.50 to produce.

a) Complete the table below showing Leonard’s business costs as a function of the number of bedspreads he makes.

<table>
<thead>
<tr>
<th>n (number of bedspreads)</th>
<th>0</th>
<th>100</th>
<th>200</th>
<th>300</th>
<th>400</th>
</tr>
</thead>
<tbody>
<tr>
<td>C(n) (Cost of n bedspreads)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

b) Leonard is selling each bedspread for $17.50. Complete the table below showing Leonard’s revenue as a function of the number of bedspreads he sells.

<table>
<thead>
<tr>
<th>n (number of bedspreads)</th>
<th>0</th>
<th>100</th>
<th>200</th>
<th>300</th>
<th>400</th>
</tr>
</thead>
<tbody>
<tr>
<td>R(n) (Revenue for n bedspreads)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

c) The profit from Leonard’s business can be found by subtracting the cost function from the revenue function. Complete the table below showing Leonard’s profit as a function of the number of bedspreads he sells.

<table>
<thead>
<tr>
<th>n (number of bedspreads)</th>
<th>0</th>
<th>100</th>
<th>200</th>
<th>300</th>
<th>400</th>
</tr>
</thead>
<tbody>
<tr>
<td>P(n) (Profit for n bedspreads)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

d) Using the information from parts a) through c), create algebraic functions for C, R and P.

\[C(n) = \]

\[R(n) = \]

\[P(n) = \]

e) Using the table from part c), make a rough estimate for the number of bedspreads Leonard needs to sell for his business to break even. (Breaking even means profit = 0)

f) Using your formula for profit, P, determine the exact number of bedspreads Leonard needs to sell for his business to break even. (Breaking even means profit = 0)
Section 2.3: Composition of Functions

12. Let \( f(x) = 4x - 2 \) and \( g(x) = -2x + 5 \). Evaluate each of the following.

a) \( f(g(-2)) = \)

b) \( g(f(-2)) = \)

c) \( f(g(4)) = \)

d) \( g(f(0)) = \)

13. Let \( s(t) = t^2 - 2 \) and \( q(t) = -2t - 3 \). Evaluate each of the following.

a) \( s(q(-2)) = \)

b) \( q(s(-2)) = \)

c) \( s(q(-1)) = \)

d) \( q(s(0)) = \)
14. Let \( f(x) = 4x - 2 \) and \( g(x) = -2x + 5 \). Find each of the following.
   a) \( f(g(x)) = \)
   b) \( g(f(x)) = \)

15. Let \( s(t) = t^2 - 7 \) and \( q(t) = t + 4 \). Find each of the following.
   a) \( s(q(t)) = \)
   b) \( q(s(t)) = \)
16. Using the functions $f(x)$ and $g(x)$ defined by the tables below, evaluate the compositions.

<table>
<thead>
<tr>
<th>$x$</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
<th>8</th>
<th>9</th>
<th>10</th>
</tr>
</thead>
<tbody>
<tr>
<td>$f(x)$</td>
<td>2</td>
<td>9</td>
<td>4</td>
<td>1</td>
<td>6</td>
<td>5</td>
<td>8</td>
<td>1</td>
<td>6</td>
<td>10</td>
</tr>
<tr>
<td>$g(x)$</td>
<td>4</td>
<td>11</td>
<td>10</td>
<td>8</td>
<td>6</td>
<td>5</td>
<td>8</td>
<td>2</td>
<td>6</td>
<td>9</td>
</tr>
</tbody>
</table>

a) $f(g(2)) =$

b) $f(g(7)) =$

c) $g(f(9)) =$

d) $f(f(8)) =$

e) $g(g(5)) =$

f) $g(f(10)) =$

17. Using the functions $f(x)$ and $g(x)$ defined by the graphs below, evaluate the compositions.

<table>
<thead>
<tr>
<th>$f(x)$</th>
<th>$g(x)$</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="Graph of f(x)" /></td>
<td><img src="image2" alt="Graph of g(x)" /></td>
</tr>
</tbody>
</table>

a) $f(g(1)) =$

b) $g(f(0)) =$

c) $g(f(-1)) =$

d) $f(g(5)) =$
Section 2.4: Applications of Function Composition

18. Raj likes playing video games. He earns 27 tokens every hour he plays.

a) Write a function, \( T \), which represents the number of tokens Raj earns for the week if he plays \( h \) hours. Also complete the table below.

\[
T(h) = \text{______________________________}
\]

<table>
<thead>
<tr>
<th>( h )</th>
<th>10</th>
<th>20</th>
<th>30</th>
<th>40</th>
</tr>
</thead>
<tbody>
<tr>
<td>( T(h) )</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

b) Raj can use his tokens to buy additional plays on the game *Bollywood Dance*. Each *Bollywood Dance* game costs 80 tokens. Write a function, \( B \), which represents the number of games of *Bollywood Dance* that Raj can buy in a week if he earns \( T \) tokens. Also complete the table below.

\[
B(T) = \text{______________________________}
\]

<table>
<thead>
<tr>
<th>( T )</th>
<th>270</th>
<th>540</th>
<th>810</th>
<th>1080</th>
</tr>
</thead>
<tbody>
<tr>
<td>( B(T) )</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

c) Using the information above, write a formula for \( B(T(h)) \) and complete the table below.

\[
B(T(h)) = \text{______________________________}
\]

<table>
<thead>
<tr>
<th>( h )</th>
<th>10</th>
<th>20</th>
<th>30</th>
<th>40</th>
</tr>
</thead>
<tbody>
<tr>
<td>( B(T(h)) )</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

d) Determine the largest number of *Bollywood Dance* games Raj can buy if he plays 23 hours in a week.

e) Interpret the meaning of the statement \( B(T(15)) = 5.0625 \). Include all appropriate units.
19. A waterpark charges $1200 to rent the park per day, plus $37 for each person who attends. The waterpark can accommodate up to 200 people.

   a) Write a function, \( T \), to represent the total cost to rent the waterpark if \( n \) people attend.

\[
T(n) = _______________________
\]

   b) During the winter months, the waterpark offers a discount of 12% off the total bill, \( T \).

Write a function, \( D \), to represent the discounted cost if the total bill was \( \$T \).

\[
D(T) = _______________________
\]

c) Using the information above, write a formula for \( D(T(n)) \) and complete the table below.

\[
D(T(n)) = _______________________
\]

<table>
<thead>
<tr>
<th>( n )</th>
<th>0</th>
<th>50</th>
<th>100</th>
<th>150</th>
<th>200</th>
</tr>
</thead>
<tbody>
<tr>
<td>( D(T(n)) )</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

d) What information does the function \( D(T(n)) \) provide in this situation? Be sure to identify the input and output quantities.

e) Interpret the meaning of the statement \( D(T(75)) = 3498 \). Include all appropriate units.

\[
D(T(n)) = _______________________
\]

f) Determine the maximum number of people that can attend the waterpark for \( \$5000 \) (after the discount is applied)?
Lesson 2 Assessment

1. If possible, simplify each of the following by combining like terms or using properties of exponents.

   a) \(2n^5 + 3n^5 = \) ____________  
   b) \(2n^5 \cdot 3n^5 = \) ____________  
   c) \(3n^3 + 3n^5 = \) ____________  
   d) \(3n^3 \cdot 3n^5 = \) ____________

2. The functions \(A\) and \(B\) are defined by the following tables

\[
\begin{array}{c|cccccccc}
 x & -3 & -2 & 0 & 1 & 4 & 5 & 8 & 10 & 12 \\
\hline
A(x) & 8 & 6 & 3 & 2 & 5 & 8 & 11 & 15 & 20 \\
\end{array}
\]

\[
\begin{array}{c|cccccccc}
 x & 0 & 2 & 3 & 4 & 5 & 8 & 9 & 11 & 15 \\
\hline
B(x) & 1 & 3 & 5 & 10 & 4 & 2 & 0 & -2 & -5 \\
\end{array}
\]

Determine the values for each of the following.

   a) \(B(3) = \) ____________  
   b) \(A(8) = \) ____________  
   c) \(A(0) + B(0) = \) ____________

   d) \(A(8) - B(8) = \) ____________  
   e) \(A(4) \cdot B(4) = \) ____________  
   f) \(\frac{A(5)}{B(5)} = \) ____________

3. Let \(p(x) = x^2 + 2x + 3\) and \(r(x) = x - 5\). Determine each of the following. Show all work. Box your answers.

   a) \(p(x) - r(x) = \) ______________________  
   b) \(p(0) \cdot r(0) = \) ______________________

   c) \(p(-2) + r(-2) = \) ______________________  
   d) \(r(7) - p(7) = \) ______________________
4. A resort hotel charges $2200 to rent a reception hall, plus $65 per person for dinner and open bar. The reception hall can accommodate up to 200 people.

   a) Write a function, \( T \), to represent the total cost to rent the reception hall if \( n \) people attend the reception.
      \[ T(n) = \] 

   b) During the summer months, the hotel offers a discount of 10% off the total bill, \( T \). Write a function, \( D \), to represent the discounted cost if the total bill was $\( T \).
      \[ D(T) = \]

   c) Using the information above, write a formula for \( D(T(n)) \) and complete the table below.
      \[ D(T(n)) = \]

      | \( n \) | 0   | 50  | 100 | 150 | 200 |
      |-------|-----|-----|-----|-----|-----|
      | D(T(n)) |     |     |     |     |     |

   d) What information does the function \( D(T(n)) \) provide in this situation? Be sure to identify the input and output quantities.

   e) Interpret the meaning of the statement \( D(T(80)) = 6660 \). Include all appropriate units.

   f) Determine the maximum number of people that can attend the reception for $10,000 (after the discount is applied)?
Lesson 3 – Linear Equations and Functions

The first Function that we are going to investigate is the Linear Function. This is a good place to start because with Linear Functions, the average rate of change is constant and no exponents are involved. Before we begin working with Linear Functions, though, we need to review the characteristics of Linear Equations and operations on Linear Equations.

Lesson Topics:

Section 3.1: Linear Equations and Functions
  ▪ Slope
  ▪ Slope-Intercept form of the equation of a line, $y = mx + b$
  ▪ Vertical Intercepts
  ▪ Horizontal Intercepts

Section 3.2: Graphs of Linear Functions
  ▪ Graph a linear equation by plotting points
  ▪ Use the slope to graph a linear equation
  ▪ Use the intercepts to graph a linear equation

Section 3.3: Horizontal and Vertical Lines
  ▪ Equations of horizontal and vertical lines
  ▪ Graphs of horizontal and vertical lines

Section 3.4: Writing the Equation of a Line
  ▪ Write linear equations from graphs
  ▪ Applications of linear equations

Mini-Lesson 3

Section 3.1 – Linear Equations and Functions

The topic of linear equations should be at least slightly familiar to students starting Intermediate Algebra. The basics are covered here with reminders of important ideas and concepts that will be heavily utilized in the next lesson.

### Slope

Slope is a measure of steepness and direction for a given line. It is denoted by the letter \( m \). Given any two points, \((x_1, y_1), (x_2, y_2)\), on a line, the slope is determined by computing the following ratio:

\[
m = \frac{\text{Change in Output}}{\text{Change in Input}} = \frac{y_2 - y_1}{x_2 - x_1} = \frac{\text{Change in } y}{\text{Change in } x} = \frac{\Delta y}{\Delta x}
\]

Note: If the slope is negative, then the line decreases from left to right.
If slope is positive, then the line increases from left to right.
If the slope is zero, then the line is horizontal (constant)
A vertical line has no slope (the slope is undefined).

### Problem 1 | WORKED EXAMPLE – Determine Slope of a Linear Equation / Function

Find the slope of the line through the given points, then determine if the line is increasing, decreasing, horizontal, or vertical.

a) \((2, -5)\) and \((-3, 4)\).

\[
m = \frac{4 - (-5)}{-3 - (2)} = \frac{4 + 5}{-5} = \frac{9}{-5} = \frac{-9}{5}
\]

Decreasing

b) \((-2, -4)\) and \((4, 8)\)

\[
m = \frac{8 - (-4)}{4 - (-2)} = \frac{8 + 4}{4 + 2} = \frac{12}{6} = 2
\]

Increasing

c) \((2, 5)\) and \((8, 5)\)

\[
m = \frac{5 - 5}{8 - 2} = \frac{0}{6} = 0
\]

Horizontal (Constant)
Problem 2 | YOU TRY – Determine Slope of a Linear Equation/Function

Find the slope of the line through the given points, then determine if the line is increasing, decreasing, horizontal, or vertical.

a) (5, –2) and (–3, 4).  
B) (6, 2) and (4, –6)

SLOPE-INTERCEPT form for the equation of a line.

A LINEAR EQUATION is an equation that can be written in the form:

\[ y = mx + b \]

with slope, \( m \), and vertical intercept \( (0, b) \).

Using function notation, the equation of a line can be written as \( f(x) = mx + b \).

Vertical Intercept \((0, b)\)

The vertical intercept is the special ordered pair with coordinates \((0, b)\). The input value is 0, and the resulting output is \( b \).

The vertical intercept is often used to help when graphing a linear equation and/or to determine the initial output value in a practical application.

There are 3 main methods for finding the vertical intercept of a linear equation/function:

**Method 1:** Read the value of \( b \) from \( y = mx + b \) or \( f(x) = mx + b \) form.

**Method 2:** Solve for \( y \) when \( x = 0 \)

**Method 3:** Evaluate \( f(0) \).
**Problem 3 | WORKED EXAMPLE – Determine Vertical Intercept for a Linear Equation**

**Example 1:** Find the vertical intercept for the equation $y = 2x - 5$.

This equation is written in the form $y = mx + b$. Here, $b = -5$.

Therefore, (using **Method 1**) the vertical intercept is $(0, -5)$.

**Example 2:** Find the vertical intercept for the equation $y = 2x - 5$.

Using **Method 2**, set $x$ to $0$ and solve for $y$.

$y = 2(0) - 5$

$y = 0 - 5$

$y = -5$

The vertical intercept is $(0, -5)$

**Example 3:** Find the vertical intercept of the linear function $f(x) = 2x - 5$.

In this example, use **Method 3** to evaluate $f(0)$.

$f(0) = 2(0) - 5$

$= 0 - 5$

$= -5$

$f(0) = -5$, therefore the vertical intercept is $(0, -5)$
Complete the problems below.

<table>
<thead>
<tr>
<th>Equation</th>
<th>$f(x) = mx + b$ form</th>
<th>Slope / Behavior</th>
<th>Vertical Intercept</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) $y = -2x + 5$</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>b) $y = 2 - x$</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>c) $y = \frac{3}{4}x + 2$</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>d) $y = 4x$</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>e) $y = -6$</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>f) $y = x$</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Horizontal Intercept \((a, 0)\)

The horizontal intercept is the special ordered pair with coordinates \((a, 0)\). The value \(a\) is the input value that results in an output of 0.

The horizontal intercept is often used to help when graphing a linear equation and/or to determine the final input value in a practical application.

**Problem 5 | MEDIA EXAMPLE – Find The Horizontal Intercept**

For each of the following problems, determine the horizontal intercept as an ordered pair.

a) \(y = -2x + 5\)  
b) \(f(x) = 2 - x\)

c) \(g(x) = \frac{3}{4}x + 2\)  
d) \(y = 4x\)

e) \(f(x) = -6\)  
f) \(y = x\)
Problem 6  |  WORKED EXAMPLE – Find The Horizontal Intercept for a Linear Equation

Find the horizontal intercept for the equation \( y = 2x - 5 \).

Replace the value of \( y \) with 0 then solve for the value of \( x \).

\[
\begin{align*}
0 &= 2x - 5 \\
5 &= 2x \\
\frac{5}{2} &= x
\end{align*}
\]

The horizontal intercept is \( \left( \frac{5}{2}, 0 \right) \).

Problem 7  |  YOU TRY – Find The Horizontal Intercept for a Linear Equation/Function

Complete the table below. Write intercepts as ordered pairs.

<table>
<thead>
<tr>
<th>Equation</th>
<th>Slope / Behavior</th>
<th>Vertical Intercept</th>
<th>Horizontal Intercept</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) ( f(x) = 6 - 4x )</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>b) ( y = 3x )</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>c) ( y = \frac{3}{5}x - 8 )</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Section 3.2 – Graphs of Linear Functions

Problem 8 | MEDIA EXAMPLE – Graphing a Linear Equation by Plotting Points

Graph the equation \( f(x) = -2x + 6 \)

<table>
<thead>
<tr>
<th>( x )</th>
<th>( f(x) )</th>
<th>Ordered Pair</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Problem 9 | MEDIA EXAMPLE – Using the SLOPE to Graph a Linear Equation

\[ \text{SLOPE} = m = \frac{\text{Change in Output}}{\text{Change in Input}} = \frac{y_2 - y_1}{x_2 - x_1} = \frac{\text{Change in } y}{\text{Change in } x} = \frac{\Delta y}{\Delta x} \]

Draw an accurate graph for \( y = -2x + 6 \). Identify at least two additional points on the line, and label them on your graph.

Page 97
Graph the equation \( y = -2x + 6 \) by plotting the intercepts on the graph.

**Vertical Intercept:** This equation is written in the form \( y = mx + b \), so the vertical intercept is \((0, 6)\).

**Horizontal Intercept:** Set \( y \) to 0 and solve for \( x \).

\[
\begin{align*}
y &= -2x + 6 \\
0 &= -2x + 6 \\
-6 &= -2x \\
3 &= x
\end{align*}
\]

So the horizontal intercept is \((3, 0)\).

PLOT and LABEL the intercepts on the graph then connect them to draw your line.
Problem 11 | YOU TRY – Draw Graphs of Linear Equations

Use the equation \( y = -\frac{3}{2}x + 6 \) for all parts of this problem. Label all plotted points.

a) Use the INTERCEPTS to draw the graph of the line. Show your work to find these points. PLOT and LABEL the intercepts on the graph then connect them to draw your line.

   Vertical Intercept: (_____, _____)

   Horizontal Intercept: (_____, _____)

b) Use the SLOPE to graph the line. Identify at least two additional points on the line (not the intercepts), and label them on your graph.

   Slope = _____________

   Two additional ordered pairs

   (_____, _____)   (_____, _____)

NOTICE: Your graphs for parts a) and b) should look exactly the same.
Section 3.3 – Horizontal and Vertical Lines

<table>
<thead>
<tr>
<th>Vertical Lines</th>
<th>Horizontal Lines</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Equation: ( x = a )</td>
<td>• Equation: ( y = b, f(x) = b )</td>

<td>• Horizontal Intercept: none</td>
</tr>
<tr>
<td>• Vertical Intercept: none</td>
<td>• Vertical Intercept: ((0, b))</td>
</tr>
<tr>
<td>• Slope: ( m ) is undefined</td>
<td>• Slope: ( m = 0 )</td>
</tr>
</tbody>
</table>

Problem 12 | MEDIA EXAMPLE – Graphing Horizontal and Vertical Lines

a) Use the grid below to graph the equation \( y = -2 \). Identify the slope and intercepts.

b) Use the grid below to graph the equations \( x = 5 \). Identify the slope and intercepts.
Problem 13  YOU TRY – HORIZONTAL AND VERTICAL LINES

a) Given the ordered pair (2, –3)
   - Sketch the graph of the vertical line through this point.
   - Write the equation of the vertical line through this point. Use function notation if possible.
   - Identify the slope of the line: __________
   - What is the vertical intercept? __________
   - What is the horizontal intercept? __________

b) Given the ordered pair (2, –3)
   - Sketch the graph of the horizontal line through this point.
   - Write the equation of the horizontal line through this point. Use function notation if possible.
   - Identify the slope of the line: __________
   - What is the vertical intercept? __________
   - What is the horizontal intercept? __________
Section 3.4 – Writing the Equation of a Line

Writing Equations of Lines

Critical to a thorough understanding of linear equations and functions is the ability to write the equation of a line given different pieces of information. The following process will work for almost every situation you are presented with and will be illustrated several times in the media problems to follow.

Step 1: Determine the value of the slope, \( m \).

Step 2: Determine the coordinates of one ordered pair.

Step 3: Plug the values for the ordered pair, and the value for the slope, into \( y = mx + b \)

Step 4: Solve for \( b \)

Step 5: Use the values for \( m \) and \( b \) to write the resulting equation in \( y = mx + b \) form.

Step 6: When appropriate, rewrite the equation in function notation: \( f(x) = mx + b \).

Problem 14 | MEDIA EXAMPLE – Writing Equations of Lines

For each of the following, find the equation of the line that meets the following criteria:

a) Slope \( m = -4 \) passing through the point \((0, 3)\).

b) Passing through the points \((0, -2)\) and \((1, 5)\)
c) Passing through the points \((-2, -3)\) and \((4, -9)\)

d) Parallel to \(y = 3x - 7\) and passing through \((2, -5)\)

e) Horizontal line passing through \((-3, 5)\).

f) Vertical line passing through \((-3, 5)\).
Write an equation of the line to satisfy each set of conditions.

a) A line that contains the points \((-3, 5)\) and \((0, 1)\)

**Slope:** Use the ordered pairs \((-3, 5)\) and \((0, 1)\) to compute slope.

\[
m = \frac{1-5}{0-(-3)} = \frac{-4}{3} = -\frac{4}{3}
\]

**Vertical Intercept:** The vertical intercept \((0, 1)\) is given in the problem, so \(b = 1\).

**Equation:** Plug \(m = -\frac{4}{3}\) and \(b = 1\) into \(y = mx + b\)

\[
y = -\frac{4}{3}x + 1
\]

\[
f(x) = -\frac{4}{3}x + 1
\]

b) Line contains points \((-4, -3)\) and \((2, 6)\)

**Slope:** Use the ordered pairs \((-4, -3)\) and \((2, 6)\) to compute slope.

\[
m = \frac{6-(-3)}{2-(-4)} = \frac{9}{6} = \frac{3}{2}
\]

**Vertical Intercept:** Because neither of the given ordered pairs is the vertical intercept, \(b\) must be computed. Pick one of the given ordered pairs. Plug \(m\) and that ordered pair into \(y = mx + b\). Solve for \(b\).

Using \((-4, -3)\) or Using \((2, 6)\)

\[
-3 = \frac{3}{2}(-4) + b \quad \text{or} \quad 6 = \frac{3}{2}(2) + b
\]

\[
-3 = -6 + b \quad 6 = 3 + b
\]

\[
3 = b \quad 3 = b
\]

**Equation:** Plug \(m = \frac{3}{2}\) and \(b = 3\) into \(y = mx + b\)

\[
y = \frac{3}{2}x + 3
\]

\[
f(x) = \frac{3}{2}x + 3
\]
Problem 16 | YOU TRY – Writing Equations of Lines

a) Find the equation of the line passing through the points (1,4) and (3, –2) and write your answer in the form $f(x) = mx + b$. Show complete work in this space.

b) What is the vertical intercept for this equation? Show work or explain your result.

c) What is the horizontal intercept for this equation? Show complete work to find this.
Problem 17 | WORKED EXAMPLE – Writing Linear Equations from Graphs

A line has the following graph:

![Graph of a line](image)

**Slope:** Identify two ordered pairs from the graph and use them to determine the slope.

(5, 0) and (3, −1)

\[ m = \frac{-1 - 0}{3 - 5} = \frac{-1}{-2} = \frac{1}{2} \]

**Vertical intercept:** Read the vertical intercept from the graph.

Ordered pair is (0, −3). Therefore \( b = -3 \).

**Equation:** Plug \( m \) and \( b \) into \( y = mx + b \)

\[ y = \frac{1}{2} x - 3 \]

\[ f(x) = \frac{1}{2} x - 3 \]
Problem 18 | YOU TRY – Writing Linear Equations from Graphs

Use the given graph of the function \( f \) below to help answer the questions below. Assume the line intersects grid corners at integer (not decimal) values.

a) Is the line above increasing, decreasing, or constant?

b) What is the vertical intercept? Also, plot and label the vertical intercept on the graph.

c) What is the horizontal intercept? Also, plot and label the horizontal intercept on the graph.

d) What is the slope? Show your work.

e) What is the equation of the line? Show complete work. Your answer must be written in function notation.
A candy company has a machine that produces candy canes. The number of candy canes produced depends on the amount of time the machine has been operating. The machine produces 160 candy canes in five minutes. In twenty minutes, the machine can produce 640 candy canes.

a) Determine a linear equation to model this situation. Clearly indicate what each variable represents.

b) Determine the vertical intercept of this linear equation. Write it as an ordered pair and interpret its practical meaning.

c) Determine the horizontal intercept of this linear equation. Write it as an ordered pair and interpret its practical meaning.

d) How many candy canes will this machine produce in 1 minute?

e) How many candy canes will this machine produce in 1 hour?
Problem 20 | YOU TRY – Applications of Linear Functions

The graph below shows a person’s distance from home as a function of time.

![Graph showing distance from home as a function of time](image)

a) Identify the vertical intercept. Write it as an ordered pair and interpret its practical meaning.

b) Identify the horizontal intercept. Write it as an ordered pair and interpret its practical meaning.

c) Determine a linear equation to model this situation. Indicate what each variable represents.

d) How far has this person traveled in one minute?
Lesson 3 Practice Problems

Section 3.1: Linear Equations and Functions

1. Find the slope of the line that passes through the given points. Then determine if the line is increasing, decreasing or constant.

<table>
<thead>
<tr>
<th>Points</th>
<th>Slope</th>
<th>Sign of Slope (+, −, 0)</th>
<th>Increasing, Decreasing or constant?</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) (3, 2) and (6, 8)</td>
<td>( m = \frac{8 - 2}{6 - 3} = \frac{6}{3} = 3 )</td>
<td>Positive</td>
<td>Increasing</td>
</tr>
<tr>
<td>b) (−2, 6) and (−6, −2)</td>
<td></td>
<td></td>
<td></td>

</tr>
<tr>
<td>c) <img src="image5.png" alt="Graph" /></td>
<td><img src="image6.png" alt="Equation" /></td>
</tr>
</tbody>
</table>
17. Use the given graph to help answer the questions below.

a) Is the line above increasing, decreasing, or constant?

b) What is the vertical intercept? Also, plot and label the point on the graph.

c) What is the horizontal intercept? Also, plot and label the point on the graph.

d) What is the slope? Show your work.

e) What is the equation of the line in \( y = mx + b \) form?
18. Find the equation of the line for the following problem. Clearly indicate what your variables represent. Graph the results.

Cora decided to go on a diet. On the day she started, she weighed 200 pounds. For the next 8 weeks, she consistently lost 2 pounds a week. At the end of 8 weeks, she decided to make a graph showing her progress.

19. Mark needed 200 pounds of roofing nails for his project. He poured one cup filled with nails into a bucket and found that it weighed 2.3 pounds. He then poured 4 more cups of nails into the bucket and found that it weighed 9.5 pounds. He figured if he used the points \((1, 2.3)\) and \((5, 9.5)\) he could figure out a formula (i.e. equation) and calculate how many cups he would need.

a) Find the equation of the line for this problem. Clearly indicate what your variables represent.

b) How many cups of roofing nails does Mark need for his project?

c) Challenge question. The formula you found above doesn’t go through the origin. Shouldn’t 0 cups of nails weigh 0 pounds? Can you figure out why 0 cups of nails actually weighs MORE than 0 pounds in Mark’s equation?
1. Determine the equation of the line between the points (4, 3) and (12, −3). Write your answer in slope-intercept form $f(x) = mx + b$.

2. The function $P(n) = 455n − 1820$ represents a computer manufacturer’s profit when $n$ computers are sold.

   a) Identify the vertical intercept. Write it as an ordered pair and interpret its practical meaning in a complete sentence.

      Ordered Pair:____________

   b) Determine the horizontal intercept. Write it as an ordered pair and interpret its practical meaning in a complete sentence.

      Ordered Pair:____________
3. Determine the equation of the vertical line passing through the point (4, 7). ______________

4. The $x$-axis is a line. Write the equation of this line. ____________

5. Fill in the table below. Intercepts must be written as ordered pairs. Write “N” if your answer does not exist (is undefined).

$I = $ Increasing  
$D = $ Decreasing  
$C = $ Constant (Horizontal)  
$V = $ Vertical

<table>

Page 128
Lesson 4 – Linear Functions and Applications

In this lesson, we take a close look at Linear Functions and how real world situations can be modeled using Linear Functions. We study the relationship between Average Rate of Change and Slope and how to interpret these characteristics. We also learn how to create Linear Models for data sets using Linear Regression.

Lesson Topics:

Section 4.1: Review of Linear Functions

Section 4.2: Average Rate of Change
  - Average Rate of Change as slope
  - Interpreting the Average Rate of Change
  - Using the Average Rate of Change to determine if a function is Linear

Section 4.3: Scatterplots on the Graphing Calculator

Section 4.4: Linear Regression
  - Using your graphing calculator to generate a Linear Regression equation
  - Using Linear Regression to solve application problems

Section 4.5: Multiple Ways to Determine the Equation of a Line

Mini-Lesson 4

Section 4.1 – Review of Linear Functions

This lesson will combine the concepts of FUNCTIONS and LINEAR EQUATIONS. To write a linear equation as a LINEAR FUNCTION, replace the variable \( y \) using FUNCTION NOTATION. For example, in the following linear equation, we replace the variable \( y \) with \( f(x) \):

\[
y = mx + b
\]

\[
f(x) = mx + b
\]

<table>
<thead>
<tr>
<th>Important Things to Remember about the LINEAR FUNCTION ( f(x) = mx + b )</th>
</tr>
</thead>
<tbody>
<tr>
<td>• ( x ) represents the INPUT quantity.</td>
</tr>
<tr>
<td>• ( f(x) ) represents the OUTPUT quantity.</td>
</tr>
<tr>
<td>• The graph of ( f ) is a straight line with slope, ( m ), and vertical intercept ((0, b)).</td>
</tr>
<tr>
<td>• Given any two points ((x_1, y_1)) and ((x_2, y_2)) on a line,</td>
</tr>
</tbody>
</table>
| \[
m = \frac{\text{Change in Output}}{\text{Change in Input}} = \frac{y_2 - y_1}{x_2 - x_1} = \frac{\text{Change in } y}{\text{Change in } x} = \frac{\Delta y}{\Delta x}
\]
| • If \( m > 0 \), the graph INCREASES from left to right, |
| If \( m < 0 \), the graph DECREASES from left to right, |
| If \( m = 0 \), then \( f(x) \) is a CONSTANT function, and the graph is a horizontal line. |
| • The DOMAIN of a Linear Function is generally ALL REAL NUMBERS unless a context or situation is applied in which case we interpret the PRACTICAL DOMAIN in that context or situation. |
| • One way to identify the vertical intercept is to evaluate \( f(0) \). In other words, substitute 0 for input \( x \) and determine the resulting output. |
| • To find the horizontal intercept, solve the equation \( f(x) = 0 \) for \( x \). In other words, set \( mx + b = 0 \) and solve for the value of \( x \). Then \((x, 0)\) is your horizontal intercept. |
Problem 1 | YOU TRY – Review of Linear Functions

The function \( E(t) = 3861 - 77.2t \) gives the surface elevation (in feet above sea level) of Lake Powell \( t \) years after 1999.

a) Identify the vertical intercept of this linear function and write a sentence explaining its meaning in this situation.

b) Determine the surface elevation of Lake Powell in the year 2001. Show your work, and write your answer in a complete sentence.

c) Determine \( E(4) \), and write a sentence explaining the meaning of your answer.

d) Is the surface elevation of Lake Powell increasing or decreasing? How do you know?

e) This function accurately models the surface elevation of Lake Powell from 1999 to 2005. Determine the practical range of this linear function.
Section 4.2 – Average Rate of Change

**Average rate of change** of a function over a specified interval is the ratio:

\[
\text{Average Rate of Change} = \frac{\text{Change in Output}}{\text{Change in Input}} = \frac{\Delta y}{\Delta x} = \frac{\text{Change in } y}{\text{Change in } x}
\]

Units for the Average Rate of Change are always \( \frac{\text{output units}}{\text{input unit}} \), which can be interpreted as “output units per input unit”

**Problem 2 | MEDIA EXAMPLE – Average Rate of Change**

The function \( E(t) = 3861 - 77.2t \) gives the surface elevation of Lake Powell \( t \) years after 1999. Use this function and your graphing calculator to complete the table below.

<table>
<thead>
<tr>
<th>( t ), years since 1999</th>
<th>( E(t) ), Surface Elevation of Lake Powell (in feet above sea level)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td></td>
</tr>
<tr>
<td>1</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td></td>
</tr>
<tr>
<td>6</td>
<td></td>
</tr>
</tbody>
</table>

a) Determine the Average Rate of Change of the surface elevation between 1999 and 2000.

b) Determine the Average Rate of Change of the surface elevation between 2000 and 2004.

c) Determine the Average Rate of Change of the surface elevation between 2001 and 2005.
d) What do you notice about the Average Rates of Change for the function $E(t)$?

e) On the grid below, draw a GOOD graph of $E(t)$ with all appropriate labels.

Because the Average Rate of Change is constant for these depreciation data, we say that a LINEAR FUNCTION models these data best.

Does AVERAGE RATE OF CHANGE look familiar? It should! Another word for “average rate of change” is SLOPE. Given any two points $(x_1, y_1)$ and $(x_2, y_2)$ on a line, the slope is determined by computing the following ratio:

$$m = \frac{\text{Change in Output}}{\text{Change in Input}} = \frac{y_2 - y_1}{x_2 - x_1}$$

Therefore, AVERAGE RATE OF CHANGE = SLOPE over a given interval.
Average Rate of Change

- Given any two points \((x_1, y_1)\) and \((x_2, y_2)\), the average rate of change between the points on the interval \(x_1\) to \(x_2\) is determined by computing the following ratio:

\[
\text{Average Rate of Change} = \frac{\text{Change in Output}}{\text{Change in Input}} = \frac{\Delta y}{\Delta x} = \frac{y_2 - y_1}{x_2 - x_1}
\]

- If the function is LINEAR, then the average rate of change will be the same between any pair of points.
- If the function is LINEAR, then the average rate of change is the SLOPE of the linear function

### Problem 3  MEDIA EXAMPLE – Is the Function Linear?
For each of the following, determine if the function is linear. If it is linear, give the slope.

a) 

<table>
<thead>
<tr>
<th></th>
<th>-4</th>
<th>-1</th>
<th>2</th>
<th>8</th>
<th>12</th>
<th>23</th>
<th>42</th>
</tr>
</thead>
<tbody>
<tr>

<td>42</td>
<td>27</td>
<td>12</td>
<td>7</td>
<td>-3</td>
<td>-18</td>
<td>-23</td>
</tr>
</tbody>
</table>
Problem 4 | YOU TRY – Is the Function Linear?

For each of the following, determine if the function is linear. If it is linear, give the slope.

a)

<table>
<thead>
<tr>
<th>$x$</th>
<th>-5</th>
<th>-2</th>
<th>1</th>
<th>4</th>
<th>6</th>
<th>8</th>
<th>11</th>
</tr>
</thead>
<tbody>
<tr>
<td>$f(x)$</td>
<td>491</td>
<td>347</td>
<td>203</td>
<td>59</td>
<td>-37</td>
<td>-133</td>
<td>-277</td>
</tr>
</tbody>
</table>

b)

<table>
<thead>
<tr>
<th>$n$</th>
<th>-8</th>
<th>-5</th>
<th>-2</th>
<th>0</th>
<th>3</th>
<th>4</th>
<th>9</th>
</tr>
</thead>
<tbody>
<tr>
<td>$A(n)$</td>
<td>6.9</td>
<td>7.5</td>
<td>8.1</td>
<td>8.5</td>
<td>9.1</td>
<td>9.3</td>
<td>10.3</td>
</tr>
</tbody>
</table>

c)

<table>
<thead>
<tr>
<th>$t$</th>
<th>-3</th>
<th>0</th>
<th>1</th>
<th>5</th>
<th>8</th>
<th>11</th>
<th>15</th>
</tr>
</thead>
<tbody>
<tr>
<td>$g(t)$</td>
<td>-4</td>
<td>-2</td>
<td>0</td>
<td>2</td>
<td>4</td>
<td>6</td>
<td>8</td>
</tr>
</tbody>
</table>
Problem 5 | MEDIA EXAMPLE – Average Rate of Change and Linear Functions

The data below represent your annual salary for the first four years of your current job.

<table>
<thead>
<tr>
<th>Time, ( t ), in years</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salary, ( S ), in thousands of dollars</td>
<td>20.1</td>
<td>20.6</td>
<td>21.1</td>
<td>21.6</td>
<td>22.1</td>
</tr>
</tbody>
</table>

a) Identify the vertical intercept. Write it as an ordered pair and interpret its meaning in a complete sentence.

b) Determine the average rate of change during this 4-year time period. Write a sentence explaining the meaning of the average rate of change in this situation. Be sure to include units.

c) Verify that the data represent a linear function by computing the average rate of change between two additional pairs of points.

d) Write the linear function model for the data. Use the indicated variables and proper function notation.
Problem 6 | YOU TRY – Average Rate of Change

The data below show a person’s body weight during a 5-week diet program.

<table>
<thead>
<tr>
<th>Time, ( t ), in weeks</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weight, ( W ), in pounds</td>
<td>196</td>
<td>192</td>
<td>193</td>
<td>190</td>
<td>190</td>
<td>186</td>
</tr>
</tbody>
</table>

a) Identify the vertical intercept. Write it as an ordered pair and write a sentence explaining its meaning in this situation.

b) Compute the average rate of change for the 5-week period. Be sure to include units.

c) Write a sentence explaining the meaning of your answer in part b) in the given situation.

d) Do the data points in the table define a perfectly linear function? Why or why not?

e) On the grid below, draw a GOOD graph of this data set with all appropriate labels.
Section 4.3 – Scatterplots on the Graphing Calculator

Consider the data set from the previous problem:

<table>
<thead>
<tr>
<th>Time, t, in weeks</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weight, W, in pounds</td>
<td>196</td>
<td>192</td>
<td>193</td>
<td>190</td>
<td>190</td>
<td>186</td>
</tr>
</tbody>
</table>

In the next example, you will see how your graphing calculator can be used to generate a scatterplot from a given data set, much like the one you drew by hand in the previous problem.

**Problem 7 | MEDIA EXAMPLE – Scatterplots on Your Graphing Calculator**

Watch the video and follow the steps on your calculator.

**Step 1: Enter the data into your calculator**

- Press STAT (Second Row of Keys)
- Press ENTER to access 1:Edit under EDIT menu
- **Note:** Be sure all data columns are cleared. To do so, use your arrows to scroll up to L1 or L2 then click CLEAR then scroll down. (DO NOT CLICK DELETE!)

Once your data columns are clear, enter the input data into L1 (press ENTER after each data value to get to the next row) then right arrow to L2 and enter the output data into L2. Your result should look like this when you are finished (for L1 and L2):

**Step 2: Turn on your Stat Plot**

- Press Y=
- Use your arrow keys to scroll up to Plot1
- Press ENTER
- Scroll down and Plot1 should be highlighted as at left
- Clear out all entries below
Step 3: Graph the Data in an Appropriate Viewing Window

- Click the WINDOW key to set your viewing window.
- Look at your data set, and determine the lowest and highest input values. In this data set, the lowest input value is 0 and the highest is 5. Set your xmin at (or just below) your lowest input value. Set your xmax at (or just above) your highest input value.
- Look at your data set, and determine the lowest and highest output values. In this data set, the lowest output value is 186 and the highest is 196. Set your ymin at (or just below) your lowest output value. Set your ymax at (or just above) your highest output value.
- Once your viewing window is set, click GRAPH. A graph of your data should appear in an appropriate window so that all data points are clearly visible.

**NOTE** If you ever accidentally DELETE a column, then go to STAT>5: SetUpEditor>ENTER. When you go back to STAT, your column should be restored.

Problem 8 | **YOU TRY – Scatterplots on Your Graphing Calculator**

Use your graphing calculator to create a scatter plot of the data set shown below. Be sure to use an appropriate viewing window.

<table>
<thead>
<tr>
<th>x</th>
<th>4</th>
<th>12</th>
<th>18</th>
<th>26</th>
<th>44</th>
<th>57</th>
<th>71</th>
</tr>
</thead>
<tbody>
<tr>
<td>y</td>
<td>648</td>
<td>641</td>
<td>645</td>
<td>637</td>
<td>632</td>
<td>620</td>
<td>616</td>
</tr>
</tbody>
</table>

In the space below, sketch what you see on your calculator screen, and write down the viewing window you used.

Viewing Window:

Xmin:_________
Xmax:_________
Ymin:_________
Ymax:_________
Section 4.4 – Linear Regression

Just because data are not EXACTLY linear does not mean we cannot write an approximate linear model for the given data set.

In fact, most data in the real world are NOT exactly linear and all we can do is write models that are close to the given values. The process for writing Linear Models for data that are not perfectly linear is called LINEAR REGRESSION. If you take a statistics class, you will learn a lot more about this process. In this class, you will be introduced to the basics. This process is also called “FINDING THE LINE OF BEST FIT”.

Problem 9 | YOU TRY – The Line of Best Fit

Below are the scatterplots of different sets of data. Notice that not all of them are exactly linear, but the data seem to follow a linear pattern. Using a ruler or straightedge, draw a straight line on each of the graphs that appears to “FIT” the data best. (Note that this line might not actually touch all of the data points.) The first one has been done for you.

To determine a linear equation that models the given data, we could do a variety of things. We could choose the first and last point and use those to write the equation. We could ignore the first point and just use two of the remaining points. Our calculator, however, will give us the best linear equation possible taking into account ALL the given data points. To find this equation, we use a process called LINEAR REGRESSION.

NOTE: Unless your data are exactly linear, the regression equation will not match all data points exactly. It is a model used to predict outcomes not provided in the data set.
Problem 10 MEDIA EXAMPLE – Linear Regression

Watch the video and follow the steps on your calculator.

Consider the data set from the previous problem:

<table>
<thead>
<tr>
<th>Time, t, in weeks</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weight, W, in pounds</td>
<td>196</td>
<td>192</td>
<td>193</td>
<td>190</td>
<td>190</td>
<td>186</td>
</tr>
</tbody>
</table>

Step 1: Enter the Data into your Graphing Calculator

Press STAT then select option 1:Edit under EDIT menu. Clear lists, then enter the values.

**NOTE** If you ever accidentally DELETE a column, then go to STAT>5: SetUpEditor>ENTER. When you go back to STAT, your column should be restored.

Step 2: Turn on your Stat Plot and Graph the Data in an Appropriate Viewing Window (Refer to previous example for help)

Step 3: Access the Linear Regression section of your calculator

- Press STAT
- Scroll to the right one place to CALC
- Scroll down to 4:LinReg(ax+b)
- Your screen should look as the one at left
Step 4: Determine the linear regression equation

- Press ENTER twice in a row to view the screen at left
- The calculator computes values for slope (a) and y-intercept (b) in what is called the equation of best-fit for your data.
- Identify these values and round to the appropriate places. Let’s say 2 decimals in this case. So, \( a = -1.69 \) and \( b = 195.38 \)
- Now, replace the a and b in \( y = ax + b \) with the rounded values to write the actual equation: \( y = -1.69x + 195.38 \)
- To write the equation in terms of initial variables, we would write \( W = -1.69t + 195.38 \)
- In function notation, \( W(t) = -1.69t + 195.38 \)

Once we have the equation figured out, it's nice to graph it on top of our data to see how things match up.

**GRAPHING THE REGRESSION EQUATION ON TOP OF THE STAT PLOT**

- Enter the Regression Equation with rounded values into \( Y= \)
- Press GRAPH
- You can see from the graph that the “best fit” line does not hit very many of the given data points. But, it will be the most accurate linear model for the overall data set.

**IMPORTANT NOTE:** When you are finished graphing your data, TURN OFF YOUR PLOT1. Otherwise, you will encounter an INVALID DIMENSION error when trying to graph other functions. To do this:

- Press \( Y= \)
- Use your arrow keys to scroll up to Plot1
- Press ENTER
- Scroll down and Plot1 should be UNhighlighted
Problem 11  YOU TRY – Linear Regression

The function \( f \) is defined by the following table.

<table>
<thead>
<tr>
<th>( n )</th>
<th>0</th>
<th>2</th>
<th>4</th>
<th>6</th>
<th>8</th>
<th>10</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>( f(n) )</td>
<td>23.76</td>
<td>24.78</td>
<td>25.93</td>
<td>26.24</td>
<td>26.93</td>
<td>27.04</td>
<td>27.93</td>
</tr>
</tbody>
</table>

a) Based on this table, determine \( f(6) \). Write the specific ordered pair associated with this result.

b) Use your graphing calculator to determine the equation of the regression line for the given data. Round to three decimals as needed.

The regression equation in \( y = ax + b \) form is: ______________________________

Rewrite the regression equation in function notation.

The regression equation in \( f(n) = an + b \) form is: ______________________________

c) Use your graphing calculator to generate a scatterplot of the data and regression line on the same screen. You must use an appropriate viewing window. In the space below, draw what you see on your calculator screen, and write down the viewing window you used.

\[
\begin{array}{l}
\text{Xmin=} \_
\text{Xmax=} \_
\text{Ymin=} \_
\text{Ymax=} \\
\end{array}
\]

d) Using your REGRESSION EQUATION, determine \( f(6) \). Write the specific ordered pair associated with this result.

e) Your answers for a) and d) should be different. Why is this the case? (refer to Problem 7 for help).
Lesson 4 – Linear Functions and Applications

Problem 12  YOU TRY – Linear Regression

The following table gives the total number of live Christmas trees sold, in millions, in the United States from 2004 to 2011. (Source: Statista.com).

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Number of Christmas Trees Sold in the U.S. (in millions)</td>
<td>27.10</td>
<td>28.60</td>
<td>28.20</td>
<td>27.00</td>
<td>30.80</td>
</tr>
</tbody>
</table>

a) Use your calculator to determine the equation of the regression line, \( C(t) \) where \( t \) represents the number of years since 2004.

Start by entering new \( t \) values for the table below based upon the number of years since 2004. The first few are done for you:

<table>
<thead>
<tr>
<th>( t ) = number of years since 2004</th>
<th>0</th>
<th>2</th>
<th>4</th>
<th>6</th>
<th>8</th>
</tr>
</thead>
<tbody>
<tr>
<td>( C(t) ) = Total number of Christmas trees sold in the U.S. (in millions)</td>
<td>27.10</td>
<td>28.60</td>
<td>28.20</td>
<td>27.00</td>
<td>30.80</td>
</tr>
</tbody>
</table>

Determine the regression equation in \( y = ax + b \) form and write it here: ____________________
Round to three decimals as needed.

Rewrite the regression equation in \( C(t) = at + b \) form and write it here: ____________________
Round to three decimals as needed.

b) Use the regression equation to determine \( C(3) \) and explain its meaning in the context of this problem.

c) Use the regression equation to predict the number of Christmas trees that will be sold in the year 2013. Write your answer as a complete sentence.

d) Identify the slope of the regression equation and explain its meaning in the context of this problem.
Problem 13 | WORKED EXAMPLE – Multiple Ways to Determine the Equation of a Line

Determine if the data below represent a linear function. If so, use at least two different methods to determine the equation that best fits the given data.

<table>
<thead>
<tr>
<th>x</th>
<th>1</th>
<th>5</th>
<th>9</th>
<th>13</th>
</tr>
</thead>
<tbody>
<tr>
<td>y</td>
<td>75</td>
<td>275</td>
<td>475</td>
<td>675</td>
</tr>
</tbody>
</table>

Compute a few slopes to determine if the data are linear.

Between (1, 75) and (5, 275) \( m = \frac{275 - 75}{5 - 1} = \frac{200}{4} = 50 \)

Between (5, 275) and (9, 475) \( m = \frac{475 - 275}{9 - 5} = \frac{200}{4} = 50 \)

Between (9, 475) and (13, 675) \( m = \frac{675 - 475}{13 - 9} = \frac{200}{4} = 50 \)

The data appear to be linear with a slope of 50.

Method 1 to determine Linear Equation – Slope Intercept Linear Form \( (y = mx + b) \):

Use the slope, \( m = 50 \), and one ordered pair, say (1, 75) to find the y-intercept

\( 75 = 50(1) + b \), so \( b = 25 \).

Thus the equation is given by \( y = 50x + 25 \).

Method 2 to determine Linear Equation – Linear Regression:

Use the steps for Linear Regression to find the equation. The steps can be used even if the data are exactly linear.

Step 1: Go to STAT>EDIT>1:Edit
Step 2: Clear L1 by scrolling to L1 then press CLEAR then scroll back down one row
Step 3: Enter the values 1, 5, 9, 13 into the rows of L1 (pressing Enter between each one)
Step 4: Right arrow then up arrow to top of L2 and Clear L2 by pressing CLEAR then scroll back down
Step 5: Enter the values 75, 275, 475, 675 into the rows of L2 (pressing Enter between each one)
Step 6: Go to STAT>EDIT>CALC>4:LinReg (ax + b) then press ENTER twice
Step 7: Read the values a and b from the screen and use them to write the equation, \( y = 50x + 25 \)
Lesson 4 Practice Problems

Section 4.1: Review of Linear Functions

1. Edward the vampire can run at a speed of 70 miles per hour. His girlfriend Bella is 875 miles away from Edward visiting her mom in Phoenix. Edward decides to visit her. Edward’s distance, \( D \), from Bella \( t \) minutes after he leaves for his trip can be modeled by the linear function \( D(t) = -70t + 875 \).

   a) Find the vertical intercept of the function and interpret its meaning in the context of the problem.

   b) Find the horizontal intercept of the function and interpret its meaning in the context of the problem.

   c) Evaluate \( D(4) \) and interpret its meaning in the context of the problem.

   d) Find the \( t \) value for which \( D(t) = 504 \) and interpret its meaning in the context of the problem.
e) Is the function $D$ increasing or decreasing? How do you know?

f) Determine the slope or rate of change of the function $D$ (Be sure to also include the units). What does the rate of change represent in the context of the problem?

g) Determine the practical domain and practical range of this function. Assume that $t \geq 0$ and that Edward stops traveling when he reaches Bella in Phoenix.

Practical Domain: $\quad \quad \quad \leq t \leq \quad \quad$

Practical Range: $\quad \quad \quad \leq D(t) \leq \quad \quad$
Section 4.2: Average Rate of Change

2. For each of the following functions, determine if the function is linear. If it is linear, give the slope.

a) \[
\begin{array}{c|cccccc}
    x & -3 & -2 & -1 & 0 & 1 & 2 \\
    f(x) & 2 & 4 & 8 & 16 & 32 & 64 \\
\end{array}
\]

b) \[
\begin{array}{c|cccccc}
    x & -3 & -2 & -1 & 0 & 1 & 2 \\
    g(x) & -2 & 0 & 2 & 4 & 6 & 8 \\
\end{array}
\]

c) \[
\begin{array}{c|cccccccc}
    t & -4 & -1 & 2 & 5 & 8 & 11 & 14 \\
    s(t) & 28 & 19 & 10 & 1 & -8 & -17 & -26 \\
\end{array}
\]

d) \[
\begin{array}{c|cccccccc}
    x & -4 & -2 & 0 & 2 & 4 & 6 & 8 \\
    h(x) & 5 & 6 & 7 & 8 & 9 & 10 & 11 \\
\end{array}
\]

e) \[
\begin{array}{c|cccccccc}
    n & -4 & -1 & 5 & 6 & 8 & 9 & 12 \\
    p(n) & -4 & -2 & 0 & 2 & 4 & 6 & 8 \\
\end{array}
\]
3. The data below represent the number of times your friend’s embarrassing YouTube Video has been viewed per hour since you uploaded it. The data are exactly linear.

<table>
<thead>
<tr>
<th>Time, t, in hours</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Views, V, in thousands</td>
<td>0</td>
<td>6200</td>
<td>12400</td>
<td>18600</td>
<td>24800</td>
</tr>
</tbody>
</table>

a) Identify the vertical intercept and average rate of change for the data.

b) Use your results from part a) to write the linear function that represents the data table. Use the indicated variables and proper function notation.

c) Use your function to determine the number of views in hour 8. Write your final result as a complete sentence.

d) Use your function to determine how many hours until the number of views reaches 100,000. Round to the nearest whole hour. Write your final result as a complete sentence.
4. You adopted an adult cat four years ago. The data below represent your cat’s weight for four years she’s lived with you. The data are exactly linear.

<table>
<thead>
<tr>
<th>Time, $t$, in years</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weight, $W$, in pounds</td>
<td>6</td>
<td>7.25</td>
<td>8.5</td>
<td>9.75</td>
<td>11</td>
</tr>
</tbody>
</table>

a) Identify the vertical intercept and average rate of change for the data.

b) Use your results from part a) to write the linear function that represents the data table. Use the indicated variables and proper function notation.

c) Use your function to determine how much the cat will weigh in year 8. Write your final result as a complete sentence.

d) Use your function to determine how many years it would take for your cat to reach 20 pounds. Round to the nearest whole year.
5. Data below represent how many pushups Tim can do in a minute at the start of a 5-week exercise program and each week thereafter.

<table>
<thead>
<tr>
<th>Time, ( t ), in weeks</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Pushups in a minute</td>
<td>2</td>
<td>6</td>
<td>10</td>
<td>14</td>
<td>18</td>
<td>20</td>
</tr>
</tbody>
</table>

a) Compute the average rate of change for weeks 0 through 3. Be sure to include the unit of your answer.

b) Compute the average rate of change for weeks 1 through 4. Be sure to include the unit of your answer.

c) Compute the average rate of change for the whole 5 – week period (weeks 0 through 5). Be sure to include the unit of your answer.

d) What is the meaning of the average rate of change in this situation?

e) Do the data points in the table define a perfectly linear function? Why or why not?
6. You decided to save up for a vacation to Europe by throwing all your loose change in a large coffee can. After a few months, you discover that the jar is 2 inches full and contains $124.

   a) Determine the average rate of change, in $/inch (Dollars per inch), for the coffee can from when it was empty (0 inches) to when it was 2 inches deep.

   b) A month later, you check the can and find the change is 3 inches deep and adds up to $186. Find the average rate of change, in $/inch, for the coffee can from 0 inches to 3 inches.

   c) What is the meaning of the average rate of change in this situation?

You do some additional calculations and create a table for the can of change.

<table>
<thead>
<tr>
<th>$d$, depth of the change in inches</th>
<th>$V$, value of the can in dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>124</td>
</tr>
<tr>
<td>3</td>
<td>186</td>
</tr>
<tr>
<td>5</td>
<td>310</td>
</tr>
<tr>
<td>10</td>
<td>620</td>
</tr>
</tbody>
</table>

d) Use the information found so far to write an equation that describes this situation. Use function notation and the variable names from the table.

e) You need $1000 for your vacation. In a complete sentence, state how deep the change has to be to reach your goal. Also, write the results as an ordered pair and in function notation.
Section 4.3: Scatterplots on the Graphing Calculator

7. Use your graphing calculator to create a scatterplot of the data set shown below. Be sure to use an appropriate viewing window.

<table>
<thead>
<tr>
<th>x</th>
<th>1</th>
<th>3</th>
<th>4</th>
<th>6</th>
<th>7</th>
<th>9</th>
<th>10</th>
</tr>
</thead>
<tbody>
<tr>
<td>y</td>
<td>437</td>
<td>886</td>
<td>1097</td>
<td>1558</td>
<td>1768</td>
<td>2217</td>
<td>2437</td>
</tr>
</tbody>
</table>

In the space below, sketch what you see on your calculator screen, and write down the viewing window you used.

Viewing Window:
Xmin: __________
Xmax: __________
Ymin: __________
Ymax: __________

8. Use your graphing calculator to create a scatterplot of the data set shown below. Be sure to use an appropriate viewing window.

<table>
<thead>
<tr>
<th>x</th>
<th>2</th>
<th>9</th>
<th>14</th>
<th>23</th>
<th>33</th>
<th>42</th>
</tr>
</thead>
<tbody>
<tr>
<td>y</td>
<td>60.2</td>
<td>130.1</td>
<td>243.7</td>
<td>328.9</td>
<td>580.5</td>
<td>643.8</td>
</tr>
</tbody>
</table>

In the space below, sketch what you see on your calculator screen, and write down the viewing window you used.

Viewing Window:
Xmin: __________
Xmax: __________
Ymin: __________
Ymax: __________
9. The following table shows the number of newspaper subscriptions in Middletown, USA where $t$ represents the number of years since 2002 ($t = 0$ in 2002) and $S(t)$ represents the total subscriptions each year measured in thousands.

<table>
<thead>
<tr>
<th>$t$ (year)</th>
<th>0</th>
<th>2</th>
<th>4</th>
<th>6</th>
<th>8</th>
</tr>
</thead>
<tbody>
<tr>
<td>$S(t)$ (total subscriptions in 1000’s)</td>
<td>448</td>
<td>372</td>
<td>198</td>
<td>145</td>
<td>45</td>
</tr>
</tbody>
</table>

a) Use your calculator to determine the equation of the regression line. (Round to 2 decimal places)

Determine the regression equation in $y = ax + b$ form and write it here:

Rewrite the regression equation in $S(t) = at + b$ form and write it here:

b) Use your graphing calculator to create a scatterplot of the data set and the linear regression equation. Be sure to use an appropriate viewing window.

In the space below, sketch what you see on your calculator screen, and write down the viewing window you used.

Viewing Window:

Xmin: 
Xmax: 
Ymin: 
Ymax: 

c) Based on your graph above, do the data appear to be exactly linear, approximately linear or not linear? Explain.
d) What is the slope of your regression model for $S(t)$ and what is its meaning in the context of this problem?

e) What is the vertical intercept of your linear regression model for $S(t)$ and what is its meaning in the context of the problem.

f) Use your linear regression equation to estimate the total number of subscriptions in 2007 (i.e. when $t = 5$). Show your computations here and your final result.

g) Use your linear regression equation to estimate the total number of subscriptions in 2004. How does this value compare to the data value in the table?

h) Use your linear regression equation to estimate the year in which the circulation will be 100,000. Round to the closest whole year. (Reminder: $S(t)$ is measured in thousands so solve $S(t) = 100$).
Lesson 4 – Linear Functions and Applications

10. Scott is hiking the Appalachian Trail from Georgia to Maine. The distance of his hike is 2200 miles. It took Scott 123 days to complete the hike. The data below represent the distance, $D$, he had hiked $t$ days after the start of his trip.

<table>
<thead>
<tr>
<th>$t$ (days hiking)</th>
<th>0</th>
<th>32</th>
<th>47</th>
<th>73</th>
<th>99</th>
<th>123</th>
</tr>
</thead>
<tbody>
<tr>
<td>$D(t)$ (distance in miles)</td>
<td>0</td>
<td>590</td>
<td>912</td>
<td>1212</td>
<td>1876</td>
<td>2200</td>
</tr>
</tbody>
</table>

a) Use your calculator to determine the equation of the regression line. (Round to 2 decimal places)

Determine the regression equation in $y = ax + b$ form and write it here:

Rewrite the regression equation in $D(t) = at + b$ form and write it here:

b) Use your graphing calculator to create of scatterplot of the data set and the linear regression equation. Be sure to use an appropriate viewing window.

In the space below, sketch what you see on your calculator screen, and write down the viewing window you used.

Viewing Window:

Xmin: 
Xmax: 
Ymin: 
Ymax: 

c) Based on your graph above, do the data appear to be exactly linear, approximately linear or not linear? Explain.
d) What is the slope of your regression model for \( D(t) \) and what is its meaning in the context of this problem?

e) Use your linear regression equation to estimate the total number of miles Scott has hiked in 50 days. Show your computations here and your final result.

f) Use your linear regression equation to estimate when Scott has hiked 1000 miles.
11. Your turn. Create a story problem where the data change linearly and then create a table that has data points for that story.

   a) Write the story problem.

   b) Create a table for the story problem. Make sure you use Function Notation.

   c) Compute the average rate of change for your data. Be sure to include units.

   d) What is the meaning of the average rate of change in this situation?

   e) Determine the vertical intercept for your data. What is the meaning of this vertical intercept?

   f) Use the vertical intercept and the rate of change to write the linear function model for the data. Use proper variable names and proper function notation.

   g) Write a **read the data** question given the input. Write your question as a complete sentence and in function notation.

   h) Write a **read the data** question given the output. Write your question as a complete sentence and in function notation.
i) Write a read between the data (Interpolating the Data) question given the input. Write your question as a complete sentence and in function notation.

j) Write a read between the data (Interpolating the Data) question given the output. Write your question as a complete sentence and in function notation.

k) Write a read beyond the data (Extrapolating the Data) question given the input. Write your question as a complete sentence and in function notation.

l) Write a read beyond the data (Extrapolating the Data) question given the output. Write your question as a complete sentence and in function notation.
Section 4.5: Multiple Ways to Determine the Equation of a Line

12. Sara is selling Girl Scout cookies. They cost $4 per box. The table below shows how much money Sara has earned, E, based on the number of days, t, she has been selling cookies.

<table>
<thead>
<tr>
<th>t</th>
<th>0</th>
<th>2</th>
<th>3</th>
<th>7</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>E(t)</td>
<td>0</td>
<td>96</td>
<td>144</td>
<td>336</td>
<td>576</td>
</tr>
</tbody>
</table>

a) Find the average rate of change for the following pairs of t values.

i. \( t = 0 \) and \( t = 2 \)

ii. \( t = 2 \) and \( t = 7 \)

iii. \( t = 3 \) and \( t = 12 \)

b) Based on your answers to part a), is it possible that the data are exactly linear? Explain.

c) Create a scatterplot for the data on your calculator. In the space below, sketch what you see on your calculator screen, and write down the viewing window you used.

Viewing Window:

Xmin:__________
Xmax:__________
Ymin:__________
Ymax:__________

d) Based on your answer to part c), do the data appear to be exactly linear, approximately linear or not linear? Explain.
e) Use your graphing calculator to find a linear regression model for the data. Record the equation below. Also draw a sketch of the line with the scatterplot below.

Regression Equation:___________________________ (form: \( E(t) = mt + b \))

Viewing Window:
Xmin:__________
Xmax:__________
Ymin:__________
Ymax:__________

f) Does the regression equation fall \textit{exactly} on the data points, \textit{approximately near} the data points or \textit{not aligned} to the data points? Explain.

g) Explain the meaning of the slope of your regression equation. How does it compare to the average rate of change you found in \textit{part a}?
12. Jose is recording the average daily temperature for his science class during the month of June in Phoenix, Arizona. The table below represents the average daily temperature \( t \) days after June 1st.

<table>
<thead>
<tr>
<th>( t )</th>
<th>0</th>
<th>1</th>
<th>3</th>
<th>5</th>
<th>8</th>

<td>2.38</td>
</tr>
</tbody>
</table>

1. Determine the sales in 2005. Write your answer in a complete sentence.

2. Let $S(t)$ represent the total sales of this company $t$ years after 1980. Use your calculator to determine regression equation for this data set. Use function notation, and round to four decimal places as needed.

3. Use the regression equation to determine sales in 2005. Round your answer to the nearest hundredth. Write your answer in a complete sentence.

4. Your answers for questions 1 and 3 should be different. Why is this the case? Answer in a complete sentence.
5. Use the regression equation to determine the year in which sales should reach $3,000,000. Write your answer in a complete sentence.

6. Interpret the meaning of the statement $S(30) = 2.44$.

7. Explain the meaning of the slope of $S(t)$. Be sure to include appropriate units.

8. Use your graphing calculator to generate a scatterplot of the data and regression line on the same screen. You must use an appropriate viewing window. In the space below, draw what you see on your calculator screen, and write down the viewing window you used.

Xmin=___________

Xmax=___________

Ymin=___________

Ymax=___________
Lesson 5 – Introduction to Exponential Functions

Exponential Functions play a major role in our lives. Many of the challenges we face involve exponential change and can be modeled by an Exponential Function. Financial considerations are the most obvious, such as the growth of our retirement savings, how much interest we are paying on our home loan or the effects of inflation.

In this lesson, we begin our investigation of Exponential Functions by comparing them to Linear Functions, examining how they are constructed and how they behave. We then learn methods for solving exponential functions given the input and given the output.

Lesson Topics:

Section 5.1: Linear Functions Vs. Exponential Functions
- Characteristics of linear functions
- Comparing linear and exponential growth
- Using the common ratio to identify exponential data
- Horizontal Intercepts

Section 5.2: Characteristics of Exponential Functions

Section 5.3: Solving Exponential Equations by Graphing
- Using the Intersect Method on the graphing calculator
- Guidelines for setting an appropriate viewing window

Section 5.4: Applications of Exponential Functions

Mini-Lesson 5

Section 5.1 – Linear Functions vs. Exponential Functions

Problem 1 | YOU TRY – Characteristics of Linear Functions

Given a function, \( f(x) = mx + b \), respond to each of the following. Refer back to previous lessons as needed.

a) The variable \( x \) represents the ______________ quantity.

b) \( f(x) \) represents the ______________ quantity.

c) The graph of \( f \) is a _______________________________ with slope _________ and vertical intercept _____________.

d) On the graphing grid below, draw an INCREASING linear function. In this case, what can you say about the slope of the line? \( m \) _____ 0 (Your choices here are > or <)

[Graphing grid]

e) On the graphing grid below, draw a DECREASING linear function. In this case, what can you say about the slope of the line? \( m \) _____ 0 (Your choices here are > or <)

[Graphing grid]

f) The defining characteristic of a LINEAR FUNCTION is that the RATE OF CHANGE (also called the SLOPE) is ________________________.

g) The domain of a LINEAR FUNCTION is ________________________________
This next example is long but will illustrate the key difference between EXPONENTIAL FUNCTIONS and LINEAR FUNCTIONS.

Problem 2 WORKED EXAMPLE – DOLLARS & SENSE

On December 31st around 10 pm, you are sitting quietly in your house watching Dick Clark's New Year's Eve special when there is a knock at the door. Wondering who could possibly be visiting at this hour you head to the front door to find out who it is. Seeing a man dressed in a three-piece suit and tie and holding a briefcase, you cautiously open the door.

The man introduces himself as a lawyer representing the estate of your recently deceased great uncle. Turns out your uncle left you some money in his will, but you have to make a decision. The man in the suit explains that you have three options for how to receive your allotment.

**Option A:** $1000 would be deposited on Dec 31st in a bank account bearing your name and each day an additional $1000 would be deposited (until January 31st).

**Option B:** One penny would be deposited on Dec 31st in a bank account bearing your name. Each day, the amount would be doubled (until January 31st).

**Option C:** Take $30,000 on the spot and be done with it.

Given that you had been to a party earlier that night and your head was a little fuzzy, you wanted some time to think about it. The man agreed to give you until 11:50 pm. Which option would give you the most money after the 31 days???

A table of values for option A and B are provided on the following page. Before you look at the values, though, which option would you select according to your intuition?

| Without “doing the math” first, I would instinctively choose the following option (circle your choice): |
|---|---|---|
| Option A | Option B | Option C |
Lesson 5 – Introduction to Exponential Functions

Option A:
$1000 to start + $1000 per day

Note that $t = 0$ on Dec. 31st

<table>
<thead>
<tr>
<th>$t$ = time in # of days since Dec 31</th>
<th>$A(t)$ = $ in account after $t$ days</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>1000</td>

What IS that number for Option B? I hope you made that choice… it’s 21 million, 4 hundred 74 thousand, 8 hundred 36 dollars and 48 cents. Let’s see if we can understand what is going on with these different options.
Problem 3 | MEDIA EXAMPLE – Compare Linear and Exponential Growth

For the example discussed in Problem 2, respond to the following:

a) Symbolic representation (model) for each situation:

\[ A(t) = \text{Type of function } \]  
\[ B(t) = \text{Type of function } \]  
\[ C(t) = \text{Type of function } \]  

b) Provide a rough but accurate sketch of the graphs for each function on the same grid below:

\[ \text{Graph Grid} \]

c) What are the practical domain and range for each function?

<table>
<thead>
<tr>
<th></th>
<th>Practical Domain</th>
<th>Practical Range</th>
</tr>
</thead>

As \(t\) increases from day 20 to 21, describe how the outputs change for each function:

\(A(t)\):

\(B(t)\):

As \(t\) increases from day 23 to 24, describe how the outputs change for each function:

\(A(t)\):

\(B(t)\):

So, in general, we can say as the inputs increase from one day to the next, then the outputs for each function:

\(A(t)\):

\(B(t)\):

In other words, \(A(t)\) grows ________________ and \(B(t)\) grows ________________.
Lesson 5 – Introduction to Exponential Functions

We have just identified the primary difference between **LINEAR FUNCTIONS** and **EXPONENTIAL FUNCTIONS**.

<table>
<thead>
<tr>
<th>Exponential Functions vs. Linear Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td>The outputs for <strong>Linear Functions</strong> change by <strong>ADDITION</strong> and the outputs for <strong>Exponential Functions</strong> change by <strong>MULTIPLICATION</strong>.</td>
</tr>
</tbody>
</table>

**Problem 4 | WORKED EXAMPLE – Are the Data Exponential?**

To determine if an exponential function is the best model for a given data set, calculate the ratio \( \frac{y_2}{y_1} \) for each of the consecutive points. If this ratio is approximately the same for the entire set, then an exponential function models the data best. For example:

<table>
<thead>
<tr>
<th>( x )</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>( y )</td>
<td>1.75</td>
<td>7</td>
<td>28</td>
<td>112</td>
<td>448</td>
</tr>
</tbody>
</table>

For this set of data, \( \frac{y_2}{y_1} = \frac{7}{1.75} = \frac{28}{7} = \frac{112}{28} = \frac{448}{112} = 4 \)

Since \( \frac{y_2}{y_1} = 4 \) for all consecutive pairs, the data are exponential with a growth factor of 4.

**Problem 5 | MEDIA EXAMPLE – Linear Data Vs. Exponential Data**

Analyze each of the following data sets to determine if the set can be modeled best by a linear function or an exponential function. Write the equation that goes with each data set.

<table>
<thead>
<tr>
<th>( x )</th>
<th>-1</th>
<th>-2</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>( y )</td>
<td>( \frac{1}{25} )</td>
<td>( \frac{1}{5} )</td>
<td>1</td>
<td>5</td>
<td>25</td>
<td>125</td>
<td>625</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>( x )</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
</tr>
</thead>
<tbody>
<tr>
<td>( y )</td>
<td>-3.2</td>
<td>-3</td>
<td>-2.8</td>
<td>-2.6</td>
<td>-2.4</td>
<td>-2.2</td>
<td>-2.0</td>
<td>-1.8</td>
</tr>
</tbody>
</table>
Problem 6  YOU TRY – Use Common Ratio to Identify Exponential Data

a) Given the following table, explain why the data can be best modeled by an exponential function. Use the idea of common ratio in your response.

<table>
<thead>
<tr>
<th>$x$</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>$f(x)$</td>
<td>15</td>
<td>12</td>
<td>9.6</td>
<td>7.68</td>
<td>6.14</td>
<td>4.92</td>
<td>3.93</td>
</tr>
</tbody>
</table>

b) Determine an exponential model $f(x) = ab^x$ that fits these data. Start by identifying the values of $a$ and $b$ and then write your final result using proper notation.

c) Determine $f(10)$. Round to the nearest hundredth.

d) Determine $f(50)$. Write your answer as a decimal and in scientific notation.
Lesson 5 – Introduction to Exponential Functions

Mini-Lesson

Section 5.2 – Characteristics of Exponential Functions

**Exponential Functions** are of the form \( f(x) = ab^x \)

where \( a \) = the INITIAL VALUE

\( b \) = the base (\( b > 0 \) and \( b \neq 1 \)); also called the GROWTH or DECAY FACTOR

**Important Characteristics of the EXPONENTIAL FUNCTION** \( f(x) = ab^x \)

- \( x \) represents the INPUT quantity
- \( f(x) \) represents the OUTPUT quantity
- The graph of \( f(x) \) is in the shape of the letter “J” with vertical intercept \((0, a)\) and base \( b \) (note that \( b \) is the same as the COMMON RATIO from previous examples)
- If \( b > 1 \), the function is an EXPONENTIAL GROWTH function, and the graph INCREASES from left to right
- If \( 0 < b < 1 \), the function is an EXPONENTIAL DECAY function, and the graph DECREASES from left to right
- Another way to identify the vertical intercept is to evaluate \( f(0) \).

**Problem 7 | WORKED EXAMPLE – Examples of Exponential Functions**

a) \( f(x) = 2(3)^x \)  
Initial Value, \( a = 2 \), Vertical Intercept = \((0, 2)\)  
Base, \( b = 3 \).  
\( f(x) \) is an exponential GROWTH function since \( b > 1 \).

b) \( g(x) = 1523(1.05)^x \)  
Initial Value, \( a = 1523 \), Vertical Intercept = \((0, 1523)\)  
Base, \( b = 1.05 \).  
\( g(x) \) is an exponential GROWTH function since \( b > 1 \).

c) \( h(x) = 256(0.85)^x \)  
Initial Value, \( a = 256 \), Vertical Intercept = \((0, 256)\)  
Base, \( b = 0.85 \).  
\( h(x) \) is an exponential DECAY function since \( b < 1 \).

d) \( k(x) = 32(0.956)^x \)  
Initial Value, \( a = 32 \), Vertical Intercept = \((0, 32)\)  
Base, \( b = 0.956 \).  
\( k(x) \) is an exponential DECAY function since \( b < 1 \).
Lesson 5 – Introduction to Exponential Functions

**Graph of a generic Exponential Growth Function**

\[ f(x) = ab^x, \; b > 1 \]

- Domain: All Real Numbers
- Range: \( f(x) > 0 \)
- Horizontal Intercept: None
- Vertical Intercept: \((0, a)\)
- Horizontal Asymptote: \(y = 0\)
- Left to right behavior of the function: INCREASING

---

**Graph of a generic Exponential Decay Function**

\[ f(x) = ab^x, \; 0 < b < 1 \]

- Domain: All Real Numbers
- Range: \( f(x) > 0 \)
- Horizontal Intercept: None
- Vertical Intercept: \((0, a)\)
- Horizontal Asymptote: \(y = 0\)
- Left to right behavior of the function: DECREASING

---

**Problem 8 | MEDIA EXAMPLE – Characteristics of Exponential Functions**

Consider the function \( f(x) = 12(1.45)^x \)

Initial Value \((a)\): ____________

Base \((b)\): ____________

Domain: ________________________________

Range: ________________________________

Horizontal Intercept: _________________

Vertical Intercept: _________________

Horizontal Asymptote: _________________

Increasing or Decreasing? _______________
**Problem 9 | YOU TRY – Characteristics of Exponential Functions**

Complete the table. Start by graphing each function using the indicated viewing window. Sketch what you see on your calculator screen.

<table>

Problem 10  WORKED EXAMPLE – Solving Exponential Equations by Graphing

Solve the equation $125(1.25)^x = 300$. Round your answer to two decimal places.

To do this, we will use a process called the INTERSECTION METHOD on our graphing calculators.

To solve $125(1.25)^x = 300$

- Press Y= then enter $Y_1 = 125(1.25)^x$ and $Y_2 = 300$
  
  **Note:** You could also let $Y_1 = 300$ and $Y_2=125(1.25)^x$

- Press WINDOW then enter the values at right. *Try to determine why these values were selected. You must see the intersection in your window. Other entries will work. If you graph and do not see both graphs AND where they intersect, you must pick new WINDOW values until you do.*

- Press 2nd>CALC
- Scroll to 5: INTERSECT and press ENTER

Notice the question, “First Curve?” The calculator is asking if $Y_1 = 125(1.25)^x$ is the first curve in the intersection.

- Press Enter to indicate “Yes”

Notice the question, “Second Curve?” The calculator is asking if $Y_2 = 300$ is the second curve in the intersection.

- Press Enter to indicate “Yes”

- Press Enter at the “Guess” question and obtain the screen at right. Your intersection values are given at screen bottom and the intersection is marked with a cursor. Round as indicated in your problem directions or as dictated by the situation.

Our answer is $x = 3.92$. Note that this information corresponds to the ordered pair (3.92, 300).
Problem 11  WORKED EXAMPLE – Solving Exponential Equations by Graphing

Given \( f(x) = 125(1.25)^x \) find \( x \) when \( f(x) = 50 \). Round your respond to two decimal places.

To do this, we need to SOLVE the equation \( 125(1.25)^x = 50 \) using the INTERSECTION METHOD.

To solve \( 125(1.25)^x = 50 \)

- Press Y= then enter \( Y1 = 125(1.25)^x \) and \( Y2 = 50 \). 
  \( \text{Note: You could also let } Y1 = 50 \text{ and } Y2 = 125(1.25)^x \)

- Press WINDOW then enter the values at right. 
  \( \text{Try to determine why these values were selected. You must see the intersection in your window. Other entries will work. If you graph and do not see both graphs AND where they intersect, you must pick new WINDOW values until you do.} \)

- Press 2nd>CALC
- Scroll to 5: INTERSECT and press ENTER

Notice the question, “First Curve?” The calculator is asking if \( Y1 = 125(1.25)^x \) is the first curve in the intersection.
  - Press Enter to indicate “Yes”

Notice the question, “Second Curve?” The calculator is asking if \( Y2 = 50 \) is the second curve in the intersection.
  - Press Enter to indicate “Yes”

- Press Enter at the “Guess” question and obtain the screen at right. Your intersection values are given at screen bottom and the intersection is marked with a cursor. Round as indicated in your problem directions or as dictated by the situation.

For this problem, we were asked to find \( x \) when \( f(x) = 50 \). Round to two decimal places. Our response is that, “When \( f(x) = 50, x = -4.11 \)”. Note that this information corresponds to the ordered pair \((-4.11, 50)\) on the graph of \( f(x) = 125(1.25)^x \)
GUIDELINES FOR SELECTING WINDOW VALUES FOR INTERSECTIONS

While the steps for using the INTERSECTION method are straightforward, choosing values for your window are not always easy. Here are some guidelines for choosing the edges of your window:

- First and foremost, the intersection of the equations MUST appear clearly in the window you select. Try to avoid intersections that appear just on the window’s edges, as these are hard to see and your calculator will often not process them correctly.

- Second, you want to be sure that other important parts of the graphs appear (i.e. where the graph or graphs cross the y-axis or the x-axis).

- When choosing values for x, start with the standard XMin = -10 and Xmax = 10 UNLESS the problem is a real-world problem. In that case, start with Xmin=0 as negative values for a world problem are usually not important. If the values for Xmax need to be increased, choose 25, then 50, then 100 until the intersection of graphs is visible.

- When choosing values for y, start with Ymin = 0 unless negative values of Y are needed for some reason. For Ymax, all graphs need to appear on the screen. So, if solving something like $234(1.23)^x = 1000$, then choose Ymax to be bigger than 1000 (say, 1500).

If the intersection does not appear in the window, then try to change only one window setting at a time so you can clearly identify the effect of that change (i.e. make Xmax bigger OR change Ymax but not both at once). Try to think about the functions you are working with and what they look like and use a systematic approach to making changes.

Problem 13 | YOU TRY – Window Values and Intersections

In each situation below, you will need to graph to find the solution to the equation using the INTERSECTION method described in this lesson. Fill in the missing information for each situation. Include a rough but accurate sketch of the graphs and intersection point. Mark and label the intersection. Round answers to two decimal places.

a) Solve $54(1.05)^x = 250$ 
Solution: $x =$ _____________

| Xmin:_________ |
| Xmax:_________ |
| Ymin:_________ |
| Ymax:_________ |

b) Solve $2340(0.82)^x = 1250$ 
Solution: $x =$ _____________

| Xmin:_________ |
| Xmax:_________ |
| Ymin:_________ |
| Ymax:_________ |

c) Solve $45 = 250(1.045)^x$ 
Solution: $x =$ _____________

| Xmin:_________ |
| Xmax:_________ |
| Ymin:_________ |
| Ymax:_________ |
Writing Exponential Equations/Functions

Given a set of data that can be modeled using an exponential equation, use the steps below to determine the particulars of the equation:

1. Identify the initial value. This is the $a$ part of the exponential equation $y = ab^x$. To find $a$, look for the starting value of the data set (the output that goes with input 0).

2. Identify the common ratio, $b$, value. To do this, make a fraction of two consecutive outputs (as long as the inputs are separated by exactly 1). We write this as the fraction $\frac{y_2}{y_1}$ to indicate that we put the second $y$ on top and the first on the bottom. Simplify this fraction and round as the problem indicates to obtain the value of $b$.

3. Plug in the values of $a$ and $b$ into $y = ab^x$ to write the exponential equation.

4. Replace $y$ with appropriate notation as needed to identify a requested exponential FUNCTION.

Problem 14  MEDIA EXAMPLE – Writing Exponential Equations/Functions

The population of a small city is shown in the following table.

<table>
<thead>
<tr>
<th>Year</th>
<th>Population</th>
</tr>
</thead>
<tbody>
<tr>
<td>2000</td>
<td>12,545</td>
</tr>
<tr>
<td>2001</td>
<td>15,269</td>
</tr>
<tr>
<td>2002</td>
<td>18,584</td>
</tr>
</tbody>
</table>

Assume that the growth is exponential. Let $t = 0$ represent the year 2000. Let $a$ be the initial population in 2000. Let $b$ equal the ratio in population between the years 2000 and 2001.

a) Write the equation of the exponential model for this situation. Round any decimals to two places. Be sure your final result uses proper function notation.

b) Using this model, forecast the population in 2008 (to the nearest person).

c) Also using this model, determine the nearest whole year in which the population will reach 50,000.
Problem 15 | YOU TRY – Writing Exponential Equations/Functions

You have just purchased a new car. The table below shows the value, V, of the car after n years.

<table>
<thead>
<tr>
<th>n = number of years</th>
<th>V = Value of Car</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>24,800</td>
</tr>
<tr>
<td>1</td>
<td>21,328</td>
</tr>
<tr>
<td>2</td>
<td>18,342</td>
</tr>
</tbody>
</table>

a) Assume that the depreciation is exponential. Write the equation of the exponential model for this situation. Round any decimals to two places. Be sure your final result uses proper function notation.

b) You finance the car for 60 months. What will the value of the car be when the loan is paid off? Show all steps. Write your answer in a complete sentence.

Problem 16 | YOU TRY – Writing Exponential Equations/Functions

In 2010, the population of Gilbert, AZ was about 208,000. By 2011, the population had grown to about 215,000.

a) Assuming that the growth is exponential, construct an exponential model that expresses the population, P, of Gilbert, AZ x years since 2010. Your answer must be written in function notation. Round to three decimals as needed.

b) Use this model to predict the population of Gilbert, AZ in 2014. Write your answer in a complete sentence.

c) According to this model, in what year will the population of Gilbert, AZ reach 300,000? (Round your answer DOWN to the nearest whole year.)
Problem 17  YOU TRY – Applications of Exponential Functions

One 8-oz cup of coffee contains about 100 mg of caffeine. The function \( A(x) = 100(0.88)^x \) gives the amount of caffeine (in mg) remaining in the body \( x \) hours after drinking a cup of coffee. Answer in complete sentences.

a) Identify the vertical intercept of this function. Write it as an ordered pair and interpret its meaning in a complete sentence.

b) How much caffeine remains in the body 8 hours after drinking a cup of coffee? Round your answer to two decimal places as needed.

c) How long will it take the body to metabolize half of the caffeine from one cup of coffee? (i.e. How long until only 50mg of caffeine remain in the body?) Show all of your work, and write your answer in a complete sentence. Round your answer to two decimal places as needed.

d) According to this model, how long will it take for all of the caffeine to leave the body?
Lesson 5 Practice Problems

Section 5.1: Linear Functions vs. Exponential Functions

1. Complete the table below.

<table>
<thead>
<tr>
<th>Function</th>
<th>Linear or Exponential?</th>
<th>Linear: Increasing or Decreasing?</th>
<th>Linear: Exponential: Growth or Decay?</th>
<th>Exponential: find the slope</th>
<th>Exponential: find the base</th>
<th>Identify the Vertical Intercept as an Ordered Pair.</th>

Lesson 5 – Introduction to Exponential Functions

Practice Problems

2. For the following three linear functions, identify the vertical intercept, calculate the slope and then write the equation for the function in $f(x) = mx + b$ form.

   a) 
   
   \[
   \begin{array}{|c|c|}
   \hline
   x & f(x) \\
   \hline
   -1 & 3 \\
   0 & 2 \\
   1 & 1 \\
   \hline
   \end{array}
   \]

   b) $f(x) = \{(-2,2), (0,3), (2,4)\}$

   c) 

3. For the following three exponential functions, identify the initial value ($a$), calculate the base ($b$), and then write the equation for the function in $f(x) = ab^x$ form.

   a) 
   
   \[
   \begin{array}{|c|c|}
   \hline
   x & f(x) \\
   \hline
   0 & 4 \\
   1 & 8 \\
   2 & 16 \\
   \hline
   \end{array}
   \]

   b) $f(x) = \{(0, 2), (1, 4.2), (2, 8.82)\}$

   c) 

Page 190
4. Determine if each data set is linear or exponential, and write the formula for each. Show complete work.

a) 

<table>
<thead>
<tr>

Section 5.3: Solving Exponential Equations

6. Given $f(x) = 50(1.25)^x$, determine each of the following and show complete work.
   
   a) $f(5) =$
   
   b) $f(50) =$
   
   c) Find $x$ when $f(x) = 75$
   
   d) Find $x$ when $f(x) = -25$

7. Given $f(x) = 100(0.90)^x$, determine each of the following and show complete work.
   
   a) $f(3) =$
   
   b) $f(30) =$
   
   c) Find $x$ when $f(x) = 25$
   
   d) Find $x$ when $f(x) = 50$

8. Given $f(x) = 25(3)^x$, determine each of the following and show complete work.
   
   a) $f(1) =$
   
   b) $f(3) =$
   
   c) Find $x$ when $f(x) = 100$
   
   d) Find $x$ when $f(x) = 5000$
Section 5.4: Applications of Exponential Functions

9. The rabbit population in several counties is shown in the following table. Assume this growth is exponential. Let $t = 0$ represent the year 2006. Let $a$ represent the initial population in 2006. Let $b$ represent the ratio in population between the years 2006 and 2007.

<table>
<thead>
<tr>
<th>Year</th>
<th>Coconino</th>
<th>Yavapai</th>
<th>Harestew</th>
</tr>
</thead>
<tbody>
<tr>
<td>2006</td>
<td>15000</td>
<td>8000</td>
<td>25000</td>
</tr>
<tr>
<td>2007</td>
<td>18000</td>
<td>12800</td>
<td>18750</td>
</tr>
<tr>
<td>2008</td>
<td>21600</td>
<td>20480</td>
<td>14063</td>
</tr>
<tr>
<td>2009</td>
<td>25920</td>
<td>32768</td>
<td>10547</td>
</tr>
</tbody>
</table>

a) Write the equation of the exponential mathematical model for each situation. Round any decimals to two places. Be sure your final result uses proper function notation. Use $C(t)$ for Coconino, $Y(t)$ for Yavapai and $H(t)$ for Harestew.

b) Use the models from part a) to forecast the rabbit population in 2012 for each county. Round to the nearest rabbit. Use proper function notation to represent each result.
c) Use the models from part a) to find the following. Show complete work.

i. The Rabbit Population in Coconino County reaches 60,000.

ii. The Rabbit Population in Yavapai Country reaches 340,000.

iii. The Rabbit Population in Harestew falls below 5000.

d) Which of the scenarios from part c) happened first? Explain your reasoning.
10. Assume you can invest $1000 at 5% Simple Interest or 4% Compound Interest (Annual). The equation for Simple Interest is modeled by: \( A = P + Prt \). Compound Interest is modeled by \( A = P(1+r)^t \). The corresponding equations for these two types of interest are given below.

\[ S(t) = 1000 + 50t \quad \text{and} \quad C(t) = 1000(1.04)^t \]

a) Complete the table for each function.

<table>
<thead>
<tr>
<th>( t )</th>
<th>1</th>
<th>5</th>
<th>10</th>
<th>15</th>
<th>20</th>
</tr>
</thead>
<tbody>
<tr>
<td>( S(t) )</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>( C(t) )</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

b) What is the vertical intercept for each function and what does it represent in the context of this problem?

c) Graph these two functions on the same graph. Plot and label their intersection. Use window Xmin=0, Xmax = 20, Ymin=1000, Ymax=2500.

d) When would the two investments return the same amount? How much would they return?

e) Which investment would you go with in the short term (less than 10 years)? Explain.
11. In 2010, the estimated population of Maricopa County was 3,817,117. By 2011, the population had grown to 3,880,244.

a) Assuming that the growth is linear, construct a linear equation that expresses the population, \( P \), of Maricopa County \( t \) years since 2010.

b) Assuming that the growth is exponential, construct an exponential equation that expresses the population, \( P \), of Maricopa County \( t \) years since 2010.

c) Use the equation found in part a) to predict the population of Maricopa County in 2015.

d) Use the equation found in part b) to predict the population of Maricopa County in 2015.
12. In each situation below, you will need to graph to find the solution to the equation using the INTERSECTION method described in this lesson. Fill in the missing information for each situation. Include a rough but accurate sketch of the graphs and intersection point. Mark and label the intersection. Round answers to two decimal places.

a) Solve $25(1.25)^x = 400$  \hspace{1cm} Solution: $x = \hspace{4cm}$

\[
\begin{array}{l}
\text{Xmin:} \hspace{1cm} \\
\text{Xmax:} \hspace{1cm} \\
\text{Ymin:} \hspace{1cm} \\
\text{Ymax:} \hspace{1cm} \\
\end{array}
\]

b) Solve $300(0.85)^x = 80$  \hspace{1cm} Solution: $x = \hspace{4cm}$

\[
\begin{array}{l}
\text{Xmin:} \hspace{1cm} \\
\text{Xmax:} \hspace{1cm} \\
\text{Ymin:} \hspace{1cm} \\
\text{Ymax:} \hspace{1cm} \\
\end{array}
\]

c) Solve $300(0.85)^x = 1700$  \hspace{1cm} Solution: $x = \hspace{4cm}$

\[
\begin{array}{l}
\text{Xmin:} \hspace{1cm} \\
\text{Xmax:} \hspace{1cm} \\
\text{Ymin:} \hspace{1cm} \\
\text{Ymax:} \hspace{1cm} \\
\end{array}
\]
d) Solve $17.5(2.05)^x = 1$
Solution: $x = \underline{\phantom{1000}}$

\[
\begin{array}{c}
X_{\text{min}}:______ \\
X_{\text{max}}:______ \\
Y_{\text{min}}:______ \\
Y_{\text{max}}:______ \\
\end{array}
\]

e) Solve $2(1.01)^x = 12$
Solution: $x = \underline{\phantom{1000}}$

\[
\begin{array}{c}
X_{\text{min}}:______ \\
X_{\text{max}}:______ \\
Y_{\text{min}}:______ \\
Y_{\text{max}}:______ \\
\end{array}
\]

f) Solve $532(0.991)^x = 100$
Solution: $x = \underline{\phantom{1000}}$

\[
\begin{array}{c}
X_{\text{min}}:______ \\
X_{\text{max}}:______ \\
Y_{\text{min}}:______ \\
Y_{\text{max}}:______ \\
\end{array}
\]
Lesson 5 Assessment

1. Complete the following table. Use proper notation.

<table>
<thead>
<tr>
<th>Growth or Decay?</th>
<th>$f(x) = 24(1.32)^x$</th>
<th>$f(x) = 3324(0.92)^x$</th>
<th>$f(x) = (1.04)^x$</th>

3. One 12-oz can of Dr. Pepper contains about 39.4 mg of caffeine. The function 
   \( A(x) = 39.4(0.8341)^x \) gives the amount of caffeine remaining in the body \( x \) hours after 
   drinking a can of Dr. Pepper. Answer in complete sentences.

   a) How much caffeine is in the body eight hours after drinking one can of Dr. Pepper? Show all of your work and write your answer in a complete sentence. Round your answer to two decimal places as needed.

   b) How long after drinking one can of Dr. Pepper will only 1 mg of caffeine remain in the body? Show all of your work, and write your answer in a complete sentence. Round your answer to two decimal places as needed.

   c) Give the equation of the horizontal asymptote of \( A(x) \). Explain the significance of the horizontal asymptote in this situation.
Lesson 6 – More Exponential Functions

Now that we have studied the basics of Exponential Functions, it is time to look at several specific concepts. In this lesson, we study Exponential Growth and Exponential Decay and look at ways to model and measure each. We also learn how to use our calculator to create an Exponential Model by using the Linear Regression tool.

Lesson Topics:

   Section 6.1: Writing Exponential Models
     ▪ Growth / Decay Rates

   Section 6.2: Doubling Time and Halving Time

   Section 6.3: Exponential Regression

</tr>
</tbody>
</table>
### Growth and Decay RATES

An exponential function \( f(x) = ab^x \) grows (or decays) at a constant percent rate, \( r \).

\[
r = \text{growth/decay rate in decimal form}
\]

| GROWTH FACTOR: \( b = 1 + r \) | GROWTH RATE: \( r = b - 1 \) |
| DECAY FACTOR: \( b = 1 - r \) | DECAY RATE: \( r = 1 - b \) |

### Problem 2 | MEDIA EXAMPLE – Writing Exponential Growth/Decay Models

Complete the following table.

<table>
<thead>
<tr>
<th>Exponential Function ( y = ab^t )</th>
<th>Growth or Decay?</th>
<th>Initial Value ( a )</th>
<th>Growth/Decay Factor ( b )</th>
<th>Growth/Decay Rate, ( r ) (as a decimal)</th>

</tbody>
</table>
Problem 5 | MEDIA EXAMPLE – Writing Exponential Decay Models / Doubling Time

In 2001, the population of a particular city was 22,395 with an identified growth rate of 6.2% per year. Assume that this growth rate is fairly consistent from year to year.

a) Write the EXPONENTIAL GROWTH MODEL for this situation.

b) What is the approximate population of the city in 2006? Be sure and round to the nearest person.

c) Estimate the number of years (to the nearest whole year) that it will take for the population to double. In what actual year will this take place?
Problem 6 | WORKED EXAMPLE - Writing Exponential Decay Models / Doubling Time

A city has a current population of 5500 people with a growth rate of 12% per year. Write the exponential model for this population and determine the time (to the nearest year) for the population to double.

First, determine the EXPONENTIAL MODEL using the information given in the problem.
- Given: Initial population = 5500
- Given: Growth rate of 12% per year
- Formula to use: \( P(t) = ab^t \)
- \( a = 5500 \) (initial population)
- To find \( b \), convert 12% to a decimal (.12). Then, since the population grows, \( b = 1 + .12 = 1.12 \) (This value is also called the GROWTH FACTOR).
- Write the model: \( P(t) = 5500(1.12)^t \)

Second, determine the time for the population to double (DOUBLING TIME)
- Given: \( P(t) = 5500(1.12)^t \), initial population = 5500
- Goal: Determine the time for the population to double. Another way to say this is, “find the value of \( t \) when the population is twice the initial population” (i.e. find \( t \) when \( P(t) = 2(5500) = 11000 \)).
- Mathematically, we want to solve the equation: \( 5500(1.12)^t = 11000 \)
- Use calculator entering \( Y1 = 5500(1.12)^t \) and \( Y2 = 11000 \). Use window \( X[0..10], Y[0..12000] \) then \( 2^{nd}>Calc>5:Intersect \) to get \( t = 6.12 \). (See graph below). Round to get \( t = 6 \).

Result: The population will double in about 6 years.

Steps to Write an Exponential Growth Model Given the Rate of Growth
- Determine initial value of the model (i.e. initial population, initial investment, initial salary, etc.). This is the value of the model at time \( t = 0 \) and the number will be your number for “\( a \)”.
- Write the given rate as a decimal and ADD it to 1. This is your value for “\( b \)” (GROWTH FACTOR).
- Write the model using appropriate function notation (i.e. \( P(t) = ab^t \), \( V(t) = ab^t \), \( S(t) = ab^t \), etc.)

Steps to Determine Doubling Time
- Start with an exponential growth model, i.e. \( P(t) = ab^t \)
- Set up the equation \( ab^t = 2a \)
- Solve by graphing and INTERSECTION method
After graduating from college in 2010, Sara accepts a job that pays $52,000 per year. At the end of each year, she expects to receive a 3% raise.

a) Let $t$ represent the number of years Sara works at her new job. Write the exponential growth function, $S(t)$, that models her annual salary given the information above.

Initial Salary ($a$ value): __________

Given growth rate as a decimal: __________

Growth factor ($b$ value): ____________

Write the model: $S(t) = InitialValue(GrowthFactor)^t = __________________$

b) If Sara’s salary continues to increase at the rate of 3% each year, determine how much will she will make in 2015. Show your work clearly here.

c) How many years will she have to work before her salary will be double what it was in 2010 (assuming the same growth rate)? Be sure to set up and clearly identify the DOUBLING equation. Then, draw a sketch of the graph you obtain when using the INTERSECTION method to solve. Round to the nearest WHOLE year.

DOUBLING EQUATION: ________________________________

DOUBLING TIME (Rounded to nearest whole year): _________________________
Problem 8  MEDIA EXAMPLE – Writing Exponential Decay Models / Halving Time

The 2000 U.S. Census reported the population of Tulsa, Oklahoma to be 382,872. Since the 2000 Census, Tulsa’s population has been decreasing at approximately 2.6% per year.

a) Write an EXPONENTIAL DECAY MODEL, \( P(t) \), that predicts the population of Tulsa, OK at any time \( t \).

b) Use the function you wrote for \( P(t) \) to predict the population of Tulsa, OK in 2013.

c) In how many years will the population of Tulsa decrease to 300,000 people (round to the nearest whole year)?

d) In how many years will the population of Tulsa decrease to HALF of the initial (2000) population? Round to the nearest whole year.
In 2012, Shannon purchased a new Ford Mustang GT convertible for $35,300. Since then, the value of the car has decreased at a rate of 11% each year.

First, determine the EXPONENTIAL MODEL using the information given in the problem.
- Given: Purchase price = $35,300
- Given: Decay rate of 11% per year
- Formula to use: \( V(t) = ab^t \)
- \( a = 35,300 \) (initial value)
- To find \( b \), convert 11% to a decimal (0.11). Since the population decays, \( b = 1 - 0.11 = 0.89 \) (This value is also called the DECAY FACTOR).
- Write the model: \( V(t) = 35300(0.89)^t \)

Second, determine the time for the price to halve (HALF-LIFE or HALVING TIME)
- Given: \( V(t) = 35300(0.89)^t \), initial price = $35,300
- Goal: Determine the time for the value of the car to halve. Another way to say this is, “find the value of \( t \) when the value is half the initial purchase price” (i.e. find \( t \) when \( V(t) = 0.5(35,300) = 17,650 \)).
- Mathematically, we want to solve the equation: \( 35300(0.89)^t = 17650 \)
- Use your calculator and enter \( Y1 = 35300(0.89)^t \) and \( Y2 = 17650 \). Use window \( X[0..10] \), \( Y[0..35300] \) then \( 2^{nd} > \text{Calc} > 5: \text{Intersect} \) to get \( t = 5.95 \) (See graph below).

- Result: The value of the car will be worth half the initial purchase price in about 6 years.

**Steps to Write an Exponential Decay Model Given the Rate of Decay**
- Determine initial value of the model (i.e. initial population, initial investment, initial salary, etc.). This is the value of the model at time \( t = 0 \) and the number will be your number for “\( a \)”.
- Write the given rate as a decimal and SUBTRACT it from 1. This is “\( b \)” (DECAY FACTOR).
- Write the model using appropriate function notation (i.e. \( P(t) = ab^t \), \( V(t) = ab^t \), \( S(t) = ab^t \), etc.)

**Steps to Determine Halving Time (also called Half-Life)**
- Start with an exponential growth model, i.e. \( P(t) = ab^t \)
- Set up the equation \( ab^t = 0.5a \)
- Solve by graphing and INTERSECTION method
Problem 10 | YOU TRY – Writing Exponential Decay Models / Halving Time

In 1970, the population of Buffalo, New York had a population of 462,768 people. Assume the population decreased by 1.4% each year from 1970 to 2000.

a) Let $t$ represent the number of years since 1970 (i.e. your starting year is 1970 so $t=0$ in this year). Write the exponential decay function, $P(t)$, that models the annual population given the information above.

Initial Population ($a$ value): __________ Given DECAY RATE as a decimal: __________

Take 1 – the DECAY RATE decimal to identify your DECAY FACTOR ($b$ value):

_______________

Write the model: $P(t) = InitialValue(DecayFactor)^t = ________________$

b) If the population continues to decrease at the rate above, determine how many people lived in Buffalo in 1989. Show your work clearly here.

c) How many years will it take for the Buffalo population to decrease to half what it was in 1970 (assuming the same decay rate)? Be sure to set up and clearly identify the HALVING equation. Then, draw a sketch of the graph you obtain when using the INTERSECTION method to solve. Round to the nearest WHOLE year.

HALVING EQUATION: __________________________

HALVING TIME (Rounded to nearest whole year): _____________________
Section 6.3 – Exponential Regression

As with LINEAR FUNCTIONS, we can work with a data table and, if appropriate, model that data using EXPONENTIAL REGRESSION. The steps are almost the same as those followed for LINEAR REGRESSION.

### Problem 11 WORKED EXAMPLE – Exponential Regression

The table below shows the population, P, in a given state after t years.

<table>
<thead>
<tr>
<th>t (years)</th>
<th>Population</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>5,234,456</td>
</tr>
<tr>
<td>10</td>
<td>4,892,345</td>
</tr>
<tr>
<td>15</td>
<td>4,012,345</td>
</tr>
</tbody>
</table>

Use the Exponential Regression feature of your calculator to generate a mathematical model for this situation. Round “a” to the nearest whole number and “b” to 3 decimals.

- Press STAT>EDIT>ENTER to show data entry area. The STAT button is on the second row, third column.

Data entry area should be blank to begin. To clear, go column by column. Scroll to column header using the arrow keys then press Clear>Enter. Use the arrow keys to move back and forth.

\[ \text{Note: The numbers for L2 are displayed using scientific notation (the E notation) since they are too long for the column width. Scroll to each number and see its full representation in the bottom of the screen. See example highlighted at right.} \]

- Press STAT>CALC>0:ExpReg>ENTER>ENTER

Thus, your exponential function (with values rounded as the problem indicates) is \( y = 6110390(0.974)^t \). Convert this to function notation with the appropriate variables to get \( P(t) = 6110390(0.974)^t \).
Problem 12 | YOU TRY – Exponential Regression

Determine the exponential regression equation that models the data below:

<table>
<thead>
<tr>
<th>$t$</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>4</th>
<th>6</th>
<th>9</th>
<th>12</th>
<th>16</th>
</tr>
</thead>
<tbody>
<tr>
<td>$P(t)$</td>
<td>125</td>
<td>75</td>
<td>50</td>
<td>32</td>
<td>22</td>
<td>16</td>
<td>10</td>
<td>5.7</td>
</tr>
</tbody>
</table>

When you write your final equation, round “$a$” to 1 decimal place and “$b$” to three decimal places.

a) Write exponential regression equation in the form $y = ab^x$: ________________

Rewrite exponential regression equation in the form $P(t) = ab^t$: ________________

b) Use your graphing calculator to generate a scatterplot of the data and the graph of the regression equation on the same screen. You must use an appropriate viewing window. In the space below, draw what you see on your calculator screen, and write down the viewing window you used.

Xmin=__________  
Xmax=__________  
Ymin=__________  
Ymax=__________

c) What is the rate of decay (as a %) for this function? _________________________

d) Determine $P(20)$. Show your work, and write the corresponding ordered pair result. Round to two decimal places.

e) Using your equation from part a, determine $t$ when $P(t) = 28$. Show your work. Write the corresponding ordered pair result. Round to two decimal places.
Problem 13  YOU TRY – Exponential Regression

The table below shows the value, $V$, of an investment (in thousands of dollars) after $n$ years.

<table>
<thead>
<tr>
<th>$n$</th>
<th>0</th>
<th>3</th>
<th>5</th>
<th>10</th>
<th>15</th>
<th>22</th>
</tr>
</thead>
<tbody>
<tr>
<td>$V(n)$</td>
<td>4.63</td>
<td>5.92</td>
<td>6.88</td>
<td>10.23</td>
<td>15.21</td>
<td>26.39</td>
</tr>
</tbody>
</table>

a) Use your calculator to determine the exponential regression equation that models the set of data above. Round the “$a$” value to two decimals, and round the “$b$” value to three decimals. Use the indicated variables and proper function notation.

b) Based on the equation found in part a), at what percent rate is the value of this investment increasing each year?

c) Determine $V(12)$, and write your answer in a complete sentence. Round your answer to two decimal places.

d) How long will it take for the value of this investment to reach $100,000$? Round your answer to two decimal places. Write your answer in a complete sentence.

e) How long will it take for the value of the investment to double? Round your answer to two decimal places. Write your answer in a complete sentence.
Lesson 6 Practice Problems

Section 6.1: Writing Exponential Models

1. Complete the following table.

<table>
<thead>
<tr>
<th>Growth Rate as a %</th>
<th>Growth Rate as a decimal</th>
<th>Growth Factor</th>
</tr>
</thead>
<tbody>
<tr>
<td>13%</td>
<td>0.13</td>
<td>1.13</td>
</tr>
<tr>
<td>21%</td>
<td></td>
<td></td>
</tr>
<tr>
<td>7%</td>
<td>0.20</td>
<td></td>
</tr>
<tr>
<td></td>
<td>0.05</td>
<td></td>
</tr>
</tbody>
</table>

2. Complete the following table.

<table>
<thead>
<tr>
<th>Decay Rate as a %</th>
<th>Decay Rate as a decimal</th>
<th>Decay Factor</th>
</tr>
</thead>
<tbody>
<tr>
<td>12%</td>
<td>0.12</td>
<td>0.88</td>
</tr>
<tr>
<td>23%</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3%</td>
<td>0.18</td>
<td>0.75</td>
</tr>
<tr>
<td></td>
<td>0.02</td>
<td>0.98</td>
</tr>
<tr>
<td></td>
<td></td>
<td>0.05</td>
</tr>
</tbody>
</table>
3. Write the exponential function for each of the following.

<table>
<thead>
<tr>
<th>Initial Value</th>
<th>Rate</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) 1500</td>
<td>Growth Rate = 15%</td>
<td></td>
</tr>
<tr>
<td>b) 75</td>
<td>Decay Rate = 15%</td>
<td></td>
</tr>
<tr>
<td>c) 1250</td>
<td>Growth Rate = 7.5%</td>
<td></td>
</tr>
<tr>
<td>d) 12</td>
<td>Growth Rate = 112%</td>
<td></td>
</tr>
<tr>
<td>e) 1000</td>
<td>Decay Rate = 12%</td>
<td></td>
</tr>
<tr>
<td>f) 56</td>
<td>Decay Rate = 5%</td>
<td></td>
</tr>
<tr>
<td>g) 100</td>
<td>Decay Rate = 0.5%</td>
<td></td>
</tr>
<tr>
<td>h) 57</td>
<td>Decay Rate = 6.2%</td>
<td></td>
</tr>
</tbody>
</table>

4. For each exponential function, identify the Initial Value and the Growth/Decay Rate.

a) \( f(x) = 1000(0.98)^x \)
   Initial Value =___________
   Decay Rate = ____________

b) \( g(x) = 3200(1.32)^x \)
   Initial Value =___________
   Growth Rate = ____________

c) \( p(t) = 50(0.75)^t \)
   Initial Value =___________
   Decay Rate = ____________

d) \( f(x) = 120(1.23)^x \)
   Initial Value =___________
   Growth Rate = ____________

e) \( A(r) = 1000(4.25)^t \)
   Initial Value =___________
   Growth Rate = ____________

f) \( g(x) = 1200(0.35)^x \)
   Initial Value =___________
   Decay Rate = ____________
5. Complete the table below.

<table>
<thead>
<tr>
<th>Exponential Function</th>
<th>Growth or Decay?</th>
<th>Initial Value</th>
<th>Growth/Decay Factor</th>
<th>Growth/Decay Rate, $r$ (as a decimal)</th>
<th>Growth/Decay Rate, $r$ (as a %)</th>
</tr>
</thead>
<tbody>
<tr>
<td>$a)$ $f(t) = 45(0.92)^t$</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>$b)$ $y = 423(1.3)^t$</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>$c)$ Growth</td>
<td>Growth</td>
<td>25</td>
<td></td>
<td>5.9%</td>
<td></td>
</tr>
<tr>
<td>$d)$ Decay</td>
<td>Decay</td>
<td>33.2</td>
<td></td>
<td>12.3%</td>
<td></td>
</tr>
<tr>
<td>$e)$</td>
<td>225</td>
<td>0.83</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>$f)$</td>
<td>832</td>
<td>1.12</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
6. When a new charter school opened in 2005, there were 300 students enrolled. **Using function notation**, write a formula representing the number, $N$, of students attending this charter school $t$ years after 2005, assuming that the student population

   a) Decreases by 20 students per year. 
   b) Decreases by 2\% per year. 

   c) Increases by 30 students per year. 
   d) Increases by 6\% per year. 

   e) Decreases by 32 students per year. 
   f) Increases by 30\% per year. 

   g) Remains constant (does not change). 
   h) Increases by 100\% each year.
## Section 6.2: Doubling Time and Halving Time

7. Determine the doubling or halving amount and the corresponding doubling or halving equation for the following functions.

<table>
<thead>
<tr>
<th></th>
<th>Function</th>
<th>Doubling or Halving Amount</th>
<th>Doubling or Halving Equation</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>$f(t) = 200(1.2)^t$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>b)</td>
<td>$f(x) = 200(0.8)^x$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>c)</td>
<td>$y = 1500(1.5)^t$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>d)</td>
<td>$p(t) = 3000(1.45)^t$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>e)</td>
<td>$g(x) = 3000(0.99)^x$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>f)</td>
<td>$S(t) = 25000(0.08)^t$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>g)</td>
<td>$h(t) = 5.2(0.57)^t$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>h)</td>
<td>$A(t) = 93.4(1.42)^t$</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
8. Find the Doubling Time or Half Life for each of the following. Use the intersect feature on your graphing calculator. (You may use your doubling or halving equation from problem 7. Round your answer to two decimal places.)

a) \( f(t) = 200(1.2)^t \)

**DOUBLING EQUATION:** __________________________

9. Amytown USA has a population of 323,000 in 1996. The growth rate is 8.4% per year. Show complete work for all problems.

   a) Find the exponential function for this scenario, \( P(t) = a \cdot b^t \), where \( t \) is the number of years since 1996 and \( P(t) \) is the population \( t \) years after 1996.

   b) Determine the population of Amytown in 2013.

   c) Determine the year in which the population of Amytown will double.

10. Since 2003, the number of fish in Lake Beckett has been decreasing at a rate of 2.3% per year. In 2003, the population of fish was estimated to be 63.2 million. Show complete work for all problems.

   a) Find the exponential function for this scenario, \( F(t) = a \cdot b^t \), where \( t \) is the number of years since 2003 and \( F(t) \) is the number of fish in millions \( t \) years after 2003.

   b) Determine the number of fish in Lake Beckett in 2020.

   c) Determine in what year the population of fish will be half the amount it was in 2003.
Section 6.3: Exponential Regression

11. Determine the exponential regression equation that models the data below:

<table>
<thead>
<tr>
<th>$x$</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>4</th>
<th>6</th>
<th>9</th>
<th>12</th>
<th>16</th>
</tr>
</thead>
<tbody>
<tr>
<td>$P(t)$</td>
<td>97</td>
<td>87</td>
<td>78</td>
<td>62</td>
<td>51</td>
<td>36</td>
<td>25</td>
<td>17</td>
</tr>
</tbody>
</table>

When you write your final equation, round “$a$” to one decimal place and “$b$” to three decimal places.

a) Write exponential regression equation in the form $y = ab^x$: __________________

Rewrite exponential regression equation in the form $P(t) = ab^t$: __________________

b) Use your graphing calculator to generate a scatterplot of the data and the graph of the regression equation on the same screen. You must use an appropriate viewing window. In the space below, draw what you see on your calculator screen, and write down the viewing window you used.

<table>
<thead>
<tr>
<th>Xmin=</th>
<th>Xmax=</th>
<th>Ymin=</th>
<th>Ymax=</th>
</tr>
</thead>
</table>

c) What is the rate of decay (as a %) for this function? __________________

d) Using your regression model, determine $P(8)$.

e) Using your regression model, find $t$ so that $P(t) = 40$. Show complete work.
Lesson 6 – More Exponential Functions

Practice Problems

12. The table below shows the value, \( V \), of an investment (in thousands of dollars) after \( n \) years.

<table>
<thead>
<tr>
<th>( n )</th>
<th>0</th>
<th>3</th>
<th>5</th>
<th>10</th>
<th>15</th>
<th>22</th>
</tr>
</thead>
<tbody>
<tr>
<td>( V(n) )</td>
<td>3.74</td>
<td>4.58</td>
<td>5.24</td>
<td>7.46</td>
<td>10.21</td>
<td>17.01</td>
</tr>
</tbody>
</table>

- a) Use your calculator to determine the exponential regression equation that models the set of data above. Round the “\( a \)” value to two decimals, and round the “\( b \)” value to three decimals. Use the indicated variables and proper function notation.

- b) Based on the your regression model, what is the percent increase per year?

- c) Find \( V(8) \), and interpret its meaning in a complete sentence. Round your answer to two decimal places.

- d) How long will it take for the value of this investment to reach $50,000? Round your answer to two decimal places. Write your answer in a complete sentence.

- e) How long will it take for the value of the investment to double? Round your answer to two decimal places. Write your answer in a complete sentence.

- f) How long will it take for the value of the investment to triple? Round your answer to two decimal places. Write your answer in a complete sentence.
Lesson 6 – More Exponential Functions

13. The following data represents the number of radioactive nuclei in a sample after $t$ days.

<table>
<thead>
<tr>
<th>$t = \text{time in days}$</th>
<th>0</th>
<th>1</th>
<th>4</th>
<th>6</th>
<th>9</th>
<th>12</th>
<th>17</th>
</tr>
</thead>
<tbody>
<tr>
<td>$N(t) = \text{number of nuclei}$</td>
<td>2500</td>
<td>2287</td>
<td>1752</td>
<td>1451</td>
<td>1107</td>
<td>854</td>
<td>560</td>
</tr>
</tbody>
</table>

Round any answers to 3 decimal places.

a) Use the exponential regression feature of your calculator to find the model of the form $N(t) = a \cdot b^t$.

b) Using your model, find the number of nuclei after 5 days.

c) Using your model, find when there will be 1000 nuclei.

d) Use your model to find the number of nuclei after 9 days. How does this compare to the data value in the table?

e) Do the data values and regression values always match up? Why or why not?
Lesson 6 Assessment

1. Consider the functions shown below.

   A. \( f(x) = (1.023)^x \)  
   B. \( f(x) = 320(0.95)^x \)  
   C. \( f(x) = 400(1.12)^x \)  
   D. \( f(x) = 34.9(1.11)^x \)  
   E. \( f(x) = 172(0.99)^x \)  
   F. \( f(x) = 8452(0.67)^x \)

   a) Which functions are increasing? ________________________________

   b) Which function is increasing at the fastest rate? ___________

       What is the growth rate for this function? ___________

   c) Which function is decreasing at the fastest rate? ___________

       What is the decay rate for this function? ___________

2. Fred and Wilma purchase a home for $180,000. Using function notation, write a formula for the value, \( V \), of the house \( t \) years after its purchase, assuming that the value

   a) Decreases by $1,500 per year.  
   b) Decreases by 2% per year.

   c) Increases by $3,100 per year.  
   d) Increases by 6% per year.
3. The following data set gives the value, \( V \), of a car after \( t \) years.

<table>
<thead>
<tr>
<th>Years since purchase</th>
<th>Value in Dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>22,425</td>
</tr>
<tr>
<td>1</td>
<td>17,956</td>
</tr>
<tr>
<td>2</td>
<td>15,218</td>
</tr>
<tr>
<td>3</td>
<td>12,749</td>
</tr>
<tr>
<td>5</td>
<td>8,860</td>
</tr>
<tr>
<td>8</td>
<td>5,311</td>
</tr>
</tbody>
</table>

a) Determine an exponential regression equation of the form \( V(t) = ab^t \) for this data set. Round the “\( a \)” value to the nearest whole number and the “\( b \)” value to three decimals.

b) Use the regression equation from part a to predict the value of the car after 12 years. Round your answer to the nearest cent. Write your answer in a complete sentence.

c) How long until the car is worth half of its original value? Round your answer to the nearest hundredth. Write your answer in a complete sentence.

d) How long will it take for the car’s value to reach $1000? Round your answer to the nearest hundredth. Write your answer in a complete sentence.

e) Based on the regression equation, at what percent rate is the car’s value decreasing each year?
Lesson 7 – Logarithms and Logarithmic Functions

Logarithms are exponents. In this Lesson, you will start by working with the LOG button on your calculator and then building an understanding of logarithms as exponents. You will learn how to read and interpret logarithms and how to compute with base 10 and other bases as well.

Prior to solving logarithmic equations, you will learn about changing back and forth form logarithmic to exponential forms. Finally, you will use what you learned about changing forms to solve logarithmic and exponential equations. Pay close attention to the idea of exact form vs. approximate form for solutions.

Lesson Topics:

Section 7.1: Introduction to Logarithms
- Discuss the concept of Logarithms as Exponents
- Compute logarithms with base 10 (Common Logarithm)
- Change an equation from logarithmic form to exponential form and vice versa

Section 7.2: Computing Logarithms
- Compute logarithms with bases other than 10
- Properties of Logarithms
- The Change of Base Formula

Section 7.3: Characteristics of Logarithmic Functions
- Use the Change of Base Formula to graph a logarithmic function and identify important characteristics of the graph.

Section 7.4: Solving Logarithmic Equations
- Solve logarithmic equations algebraically by changing to exponential form.
- Determine EXACT FORM and APPROXIMATE FORM solutions for logarithmic equations

Section 7.5: Solving Exponential Equations Algebraically and Graphically
- Determine EXACT FORM and APPROXIMATE FORM solutions for exponential equations

Section 7.6: Using Logarithms as a Scaling Tool

Logarithms are really EXPONENTS in disguise. The following two examples will help explain this idea.

<table>
<thead>
<tr>
<th>Problem 1</th>
<th>YOU TRY – COMPUTE BASE 10 LOGARITHMS USING YOUR CALCULATOR</th>
</tr>
</thead>
</table>

Locate the **LOG** button on your calculator. Use it to fill in the missing values in the input/output table. The first and last are done for you. When you use your calculator, remember to close parentheses after your input value.

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y = \log(x)$</th>

### Reading and Interpreting Logarithms

$log_b x = y$

Read this as “Log, to the BASE b, of $x$, equals $y$”

This statement is true if and only if

$b^y = x$

**Meaning:**
The logarithm (output of $\log_b x$) is the EXPONENT on the base, $b$, that will give you input $x$.

*Note: The Problem 2 logarithm is called a COMMON LOGARITHM because the base is understood to be 10. When there is no base value written, you can assume the base $= 10$.*

$log(x) = \log_{10}(x)$
### Problem 3  | MEDIA EXAMPLE – EXPONENTIAL AND LOGARITHMIC FORMS

Complete the table.

<table>
<thead>
<tr>
<th></th>
<th>Exponential Form</th>
<th>Logarithmic Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>$\underline{\text{6}}^3 = 216$</td>
<td>$\log_\text{6} 216 = \underline{\text{3}}$</td>
</tr>
<tr>
<td>b)</td>
<td>$\underline{\text{5}}^{-2} = \frac{1}{25}$</td>
<td>$\log_\text{5} \frac{1}{25} = \underline{-2}$</td>
</tr>
<tr>
<td>d)</td>
<td>log, 16807 = 5</td>
<td></td>
</tr>
<tr>
<td>e)</td>
<td>log, $x = 5$</td>
<td></td>
</tr>
</tbody>
</table>

Note: When you write expressions involving logarithms, be sure the base is a SUBSCRIPT and written just under the writing line for Log. Pay close attention to how things are written and what the spacing and exact locations are.

### Problem 4  | YOU TRY – EXPONENTIAL AND LOGARITHMIC FORMS

Complete the table.

<table>
<thead>
<tr>
<th></th>
<th>Exponential Form</th>
<th>Logarithmic Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>$3^4 = 81$</td>
<td></td>
</tr>
<tr>
<td>b)</td>
<td>log, $x = 6$</td>
<td></td>
</tr>
<tr>
<td>c)</td>
<td>log, $\left(\frac{1}{8}\right) = -3$</td>
<td></td>
</tr>
</tbody>
</table>
Below are some basic properties of exponents that you will need to know.

**Properties of Exponents**

- \( b^0 = 1 \)
- \( \frac{1}{b} = b^{-1} \)
- \( \sqrt{b} = b^{1/2} \)
- \( b^1 = b \)
- \( \frac{1}{b^n} = b^{-n} \)
- \( \sqrt[n]{b} = b^{1/n} \)

---

**Problem 5**

**MEDIA EXAMPLE – COMPUTE LOGARITHMS WITH BASES OTHER THAN 10**

Compute each of the following logarithms and verify your result with an exponential “because” statement.

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a) ( \log_2 2^4 = )</td>
<td></td>
<td>because</td>
</tr>
<tr>
<td>b) ( \log_2 4 = )</td>
<td></td>
<td>because</td>
</tr>
<tr>
<td>c) ( \log_3 27 = )</td>
<td></td>
<td>because</td>
</tr>
<tr>
<td>d) ( \log_8 1 = )</td>
<td></td>
<td>because</td>
</tr>
<tr>
<td>e) ( \log_5 \sqrt[5]{5} = )</td>
<td></td>
<td>because</td>
</tr>
<tr>
<td>f) ( \log_4 4 = )</td>
<td></td>
<td>because</td>
</tr>
</tbody>
</table>
Properties of Logarithms

<table>
<thead>
<tr>
<th>log_b_x = y</th>
<th>because</th>
<th>b^y = x</th>
</tr>
</thead>
<tbody>
<tr>
<td>log_b_1 = 0</td>
<td>because</td>
<td>b^0 = 1</td>
</tr>
<tr>
<td>log_b_b = 1</td>
<td>because</td>
<td>b^1 = b</td>
</tr>
<tr>
<td>log_b_b^n = n</td>
<td>because</td>
<td>b^n = b^n</td>
</tr>
<tr>
<td>log_b_0 does not exist</td>
<td>because</td>
<td>There is no power of b that will give a result of 0.</td>
</tr>
</tbody>
</table>

Problem 6 | WORKED EXAMPLE - COMPUTE LOGARITHMS

Compute each of the following logarithms and verify your result with an exponential “because” statement.

a) \( \log\_3\frac{1}{9} = \log\_3\frac{1}{3^2} = \log\_3 3^{-2} \)

so \( \log\_3\frac{1}{9} = -2 \)

because \( 3^{-2} = \frac{1}{9} \)

b) \( \log\_6\frac{1}{36} = \log\_6\frac{1}{6^2} = \log\_6 6^{-2} \)

so \( \log\_6\frac{1}{36} = -2 \)

because \( 6^{-2} = \frac{1}{36} \)

b) \( \log 1000 = \log_{10} 1000 = \log_{10} 10^3 \)

so \( \log 1000 = 3 \)

This is the COMMON LOGARITHM (no base written), so the base=10

because \( 10^3 = 1000 \)

c) \( \log 1 = 0 \)

because \( 5^0 = 1 \)

d) \( \log 0 \) does not exist (D.N.E.)

because \( \text{There is no power of 7 that will give a result of 0.} \)
Problem 7 | YOU TRY - COMPUTE LOGARITHMS

Compute each of the following logarithms and verify your result with an exponential “because” statement.

<table>
<thead>
<tr>
<th>a) ( \log_2 64 ) =</th>
<th>because</th>
</tr>
</thead>
<tbody>
<tr>
<td>b) ( \log_3 1 ) =</td>
<td>because</td>
</tr>
<tr>
<td>c) ( \log_{\frac{1}{1000}} 1 ) =</td>
<td>because</td>
</tr>
<tr>
<td>d) ( \log 0 ) =</td>
<td>because</td>
</tr>
<tr>
<td>e) ( \log_8 \sqrt{8} ) =</td>
<td>because</td>
</tr>
</tbody>
</table>
Now that we know something about working with logarithms, let’s see how our calculator can help us with more complicated examples.

### Problem 8 | MEDIA EXAMPLE – INTRODUCING CHANGE OF BASE FORMULA

Let’s try to compute \( \log_2 19 \). To start, let’s estimate values for this number. Try to find the two consecutive (one right after the other) whole numbers that \( \log_2 19 \) lives between.

\[
\underline{\text{______}} < \log_2 19 < \underline{\text{______}}
\]

\[
\underline{\text{______}} < \log_2 19 < \underline{\text{______}}
\]

So, now we have a good estimate for \( \log_2 19 \) let’s see how our calculator can help us find a better approximation for the number.

To compute \( \log_2 19 \) in your calculator, use the following steps: Log>19)>/Log2)>ENTER and round to three decimals to get:

\[
\log_2 19 = \underline{\text{______}}
\]

Do we believe this is a good approximation for \( \log_2 19 \)? How would we check?

\[
\underline{\text{______}}
\]

So, our estimation for \( \log_2 19 \) is good and we can say \( \log_2 19 = \underline{\text{______}} \) with certainty.

How did we do that again? We said that \( \log_2 19 = \frac{\log(19)}{\log(2)} \). How can we do that for any problem?

### Change of Base Formula – Converting with Common Logarithms (base 10)

\[
\log_b x = \frac{\log(x)}{\log(b)}
\]
### Problem 9: YOU TRY – COMPUTE LOGARITHMS USING CHANGE OF BASE FORMULA

Use the Change of Base formula given on the previous page, and your calculator, to compute each of the following. The first one is done for you.

<table>
<thead>
<tr>
<th>Compute</th>
<th>Rewrite using Change of Base</th>
<th>Final Result (3 decimal places)</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) ( \log_3 8 )</td>
<td>( \frac{\log(8)}{\log(3)} )</td>
<td>1.893</td>
</tr>
<tr>
<td>b) ( \log_5 41 )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>c) ( \log_8 12 )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>d) ( \log_{1.5} 32 )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>e) ( 12.8 + \log_3 25 )</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The Change of Base Formula can be used to graph Logarithmic Functions. In the following examples, we will look at the graphs of two Logarithmic Functions and analyze the characteristics of each.

**Problem 10** | **WORKED EXAMPLE – GRAPHING LOGARITHMIC FUNCTIONS**

Given the function \( f(x) = \log_2 x \), graph the function using your calculator and identify the characteristics listed below. Use window \( x: [-5..10] \) and \( y: [-5..5] \).

Graphed function: To enter the function into the calculator, we need to rewrite it using the Change of Base Formula, enter that equation into \( Y_1 \), and then Graph.

\[
 f(x) = \log_2 x = \frac{\log x}{\log 2}
\]

**Characteristics of the Logarithmic Functions:**

**Domain:** \( x > 0 \), Interval Notation: \((0,\infty)\)

The graph comes close to, but never crosses the vertical axis. Any input value that is less than or equal to 0 \( (x \leq 0) \) produces an error. Any input value greater than 0 is valid. The table above shows a snapshot of the table from the calculator to help illustrate this point.

**Range:** All Real Numbers, Interval Notation \((-\infty,\infty)\)

The graph has output values from negative infinity to infinity. As the input values get closer and closer to zero, the output values continue to decrease (See the table to the right). As input values get larger, the output values continue to increase. It slows, but it never stops increasing.

**Vertical Asymptote** at \( x = 0 \). The graph comes close to, but never crosses the line \( x = 0 \) (the vertical axis). Recall that, for any base \( b \), \( \log_b(0) \) does not exist because there is no power of \( b \) that will give a result of 0.

**Vertical Intercept:** Does Not Exist (DNE).

**Horizontal Intercept:** \((1,0)\) This can be checked by looking at both the graph and the table above as well as by evaluating \( f(1) = \log_2(1) = 0 \). Recall that, for any base \( b \), \( \log_b(1) = 0 \) because \( b^0 = 1 \).
The Logarithmic Function in Problem 7 is of the form \( f(x) = \log_b x, \, (b > 0 \text{ and } b \neq 1) \). All Logarithmic Functions of this form share key characteristics. In this example, we look at a typical graph of this type of function and list the key characteristics in the table below.

\[
f(x) = \log_b x, \, (b > 0 \text{ and } b \neq 1)
\]

<table>
<thead>
<tr>
<th>Domain</th>
<th>( x &gt; 0 ) (all positive real numbers)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range</td>
<td>All real numbers</td>
</tr>
<tr>
<td>Horizontal Intercept</td>
<td>(1, 0)</td>
</tr>
<tr>
<td>Vertical Asymptote</td>
<td>( x = 0 )</td>
</tr>
<tr>
<td>Vertical Intercept</td>
<td>Does not exist</td>
</tr>
<tr>
<td>Left to Right Behavior</td>
<td>The function is always increasing but more and more slowly (at a decreasing rate)</td>
</tr>
<tr>
<td>Values of ( x ) for which ( f(x) &gt; 0 )</td>
<td>( x &gt; 1 )</td>
</tr>
<tr>
<td>Values of ( x ) for which ( f(x) &lt; 0 )</td>
<td>( 0 &lt; x &lt; 1 )</td>
</tr>
<tr>
<td>Values of ( x ) for which ( f(x) = 0 )</td>
<td>( x = 1 )</td>
</tr>
<tr>
<td>Values of ( x ) for which ( f(x) = 1 )</td>
<td>( x = b ) because ( \log_b b = 1 )</td>
</tr>
</tbody>
</table>
Problem 12  YOU TRY – GRAPHING LOGARITHMIC FUNCTIONS

Graph \( g(x) = \log_6 x \) on your graphing calculator. Use window \( x: [0..10] \) and \( y: [-2..2] \). Use Change of Base to rewrite your function before graphing. Draw an accurate graph in the space below and fill in the table.

\[
g(x) = \log_6 x = \frac{\log x}{\log 6}
\]

(rewrite using Change of Base)

<p>| | |</p>
<table>

</tbody>
</table>
Section 7.4 – Solving Logarithmic Equations

We will use what we now know about Logarithmic and Exponential forms to help us solve Logarithmic Equations. There is a step-by-step process to solve these types of equations. Try to learn this process and apply it to these types of problems.

**Solving Logarithmic Equations – By Changing to Exponential Form**

Solving logarithmic equations involves these steps:
1. **ISOLATE** the logarithmic part of the equation
2. Change the equation to **EXPONENTIAL** form
3. **ISOLATE** the variable
4. **CHECK** your result if possible
5. **IDENTIFY** the final result in **EXACT** form then in rounded form as indicated by the problem

Notes:
- To **ISOLATE** means to manipulate the equation using addition, subtraction, multiplication, and division so that the Log part and its input expression are by themselves.
- **EXACT FORM** for an answer means an answer that is not rounded until the last step

---

**Problem 13 | MEDIA EXAMPLE – SOLVING LOGARITHMIC EQUATIONS**

<table>
<thead>
<tr>
<th>Solve $\log_3 x = 2$ for $x$</th>
<th>Original Problem Statement</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Step 1: <strong>ISOLATE</strong> the logarithmic part of the equation</td>
</tr>
<tr>
<td></td>
<td>Step 2: Change the equation to <strong>EXPONENTIAL</strong> form</td>
</tr>
<tr>
<td></td>
<td>Step 3: <strong>ISOLATE</strong> the variable</td>
</tr>
<tr>
<td></td>
<td>Step 4: <strong>CHECK</strong> your result if possible</td>
</tr>
<tr>
<td></td>
<td>Step 5: <strong>IDENTIFY</strong> the final result in <strong>EXACT</strong> form then in rounded form as indicated by the problem</td>
</tr>
<tr>

<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Problem 17</th>
<th>YOU TRY - SOLVING LOGARITHMIC EQUATIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solve $5 + 4\log_3(7x + 1) = 8$ for $x$</td>
<td>Original Problem Statement</td>
</tr>
<tr>
<td>Step 1: ISOLATE the logarithmic part of the equation</td>
<td></td>
</tr>
<tr>
<td>Step 2: Change the equation to EXPONENTIAL form</td>
<td></td>
</tr>
<tr>
<td>Step 3: ISOLATE the variable</td>
<td></td>
</tr>
<tr>
<td>Step 4: CHECK your result if possible</td>
<td></td>
</tr>
<tr>
<td>Step 5: IDENTIFY the final result in EXACT form then in rounded form as indicated by the problem</td>
<td></td>
</tr>
</tbody>
</table>
What’s all the fuss? Exact form? Approximate Form? Why does it matter?

If you wanted to approximate the fraction $\frac{1}{3}$, what would you say? Probably that $\frac{1}{3}$ is about .3, right?

But what does $\frac{1}{3}$ ACTUALLY equal? Well, it equals .33333333333 repeating forever. Any number of decimals that we round to in order to represent $\frac{1}{3}$ is an APPROXIMATION. The only EXACT representation of $\frac{1}{3}$ is $\frac{1}{3}$.

So what difference does this make? Suppose you wanted to compute $4^{\frac{1}{3}}$. Look at the following computations to as many decimals as we can.

$$4^{\frac{1}{3}} = 4^{(1/3)} \text{ on your calculator } = 1.587401052$$
$$4^3 = 4^{.3} \text{ on your calculator } = 1.515716567$$

The final computation results are not the same but they are pretty close depending on where we would round the final resul. Which one is more accurate? The $4^{\frac{1}{3}}$ is more accurate because we used EXACT form for $\frac{1}{3}$.

What happens when the base of the exponential is much larger? Suppose you want to compute $1025^{\frac{1}{3}}$.

$$1025^{\frac{1}{3}} = 1025^{(1/3)} = 10.08264838$$
$$1025^3 = 1025^{(.3)} = 8.002342949$$

These two results are quite a bit different and this type of behavior only gets worse as the numbers you are working with get larger. So, remember, if you are asked to compute a result to EXACT form, do not round any computation in your solution process until the very end.
Section 7.5 – Solving Exponential Equations Algebraically and Graphically

We will use what we now know about Logarithmic and Exponential forms and Change of Base formula to help us solve Exponential Equations.

<table>
<thead>
<tr>
<th>Problem 18</th>

1. **Step 1**: ISOLATE the exponential part of the equation

2. **Step 2**: Change the equation to LOGARITHMIC form

3. **Step 3**: ISOLATE the variable

4. **Step 4**: IDENTIFY the final result in EXACT form then in rounded form as indicated by the problem. You may need to use Change of Base here to compute your logarithm.

5. **Step 5**: CHECK your result by using the graphing (intersection) method to solve the original problem. Sketch the graph at in the space at left.
Lesson 7 – Logarithms and Logarithmic Functions  

Section 7.6 – Using Logarithms as a Scaling Tool

Logarithms are used in the sciences particularly in biology, astronomy and physics. The Richter scale measurement for earthquakes is based upon logarithms, and logarithms formed the foundation of our early computation tool (pre-calculators) called a Slide Rule.

One of the unique properties of Logarithms is their ability to scale numbers of great or small size so that these numbers can be understood and compared. Let’s see how this works with an example.

**Problem 21**  
**WORKED EXAMPLE – USING LOGARITHMS AS A SCALING TOOL**

Suppose you are given the following list of numbers and you want to plot them all on the same number line:

Plot 0.00000456, 0.00372, 1.673, 1356, 123,045 and 467,456,345,234.

If we scale to the larger numbers, then the smaller numbers blend together and we can’t differentiate them.

Let’s use logarithms and create a logarithmic scale and see how that works. First, make a table that translates your list of numbers into logarithmic form by taking the “log base 10” or common logarithm of each value.

<table>
<thead>
<tr>
<th>Original #</th>
<th>0.00000456</th>
<th>0.00372</th>
<th>1.673</th>
<th>1356</th>
<th>123,045</th>
<th>467,456,345,234</th>
</tr>
</thead>
<tbody>
<tr>
<td>Log (#)</td>
<td>-5.3</td>
<td>-2.4</td>
<td>0.2</td>
<td>3.1</td>
<td>5.1</td>
<td>11.7</td>
</tr>
</tbody>
</table>

Then, redraw your number line and plot the logarithmic value for each number.

Notice that labeling your scale as a logarithmic scale is VERY important. Otherwise, you may not remember to translate back to the actual data and you may forget that your tick marks are not unit distances.

The new scale gives you an idea of the relative distance between your numbers and allows you to plot all your numbers at the same time. To understand the distance between each tick mark, remember that the tick mark label is the exponent on 10 (base of the logarithm used). So from 1 to 2 is a distance of $10^2 - 10^1 = 100 - 10 = 90$. The distance between 2 and 3 is $10^3 - 10^2$ or 1000 – 100 = 900, etc…

You will learn a LOT more about logarithmic scaling if you take science classes, as this is just a very brief introduction to the idea.
Lesson 7 Practice Problems

Section 7.1: Introduction to Logarithms

1. Locate the LOG button on your calculator. Use it to fill in the missing values in the input/output table. When you use your calculator, remember to close parentheses after your input value.

<table>
<thead>
<tr>
<th></th>
<th>x</th>
<th>Function</th>
<th>y</th>
<th>(x,y)</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>5</td>
<td>$y = \log(x)$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>b)</td>
<td>3</td>
<td>$y = 4 \log(x)$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>c)</td>
<td>2</td>
<td>$y = \log(x)^4$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>d)</td>
<td>6</td>
<td>$y = \frac{\log(x)}{\log(2)}$</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. Complete the table filling in the missing forms

<table>
<thead>
<tr>
<th></th>
<th>Exponential Form</th>
<th>Logarithmic Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>$3^2 = 9$</td>
<td></td>
</tr>
<tr>
<td>b)</td>
<td>$16^{\frac{1}{2}} = 4$</td>
<td></td>
</tr>
<tr>
<td>c)</td>
<td>$2^{-3} = \frac{1}{8}$</td>
<td></td>
</tr>
<tr>
<td>d)</td>
<td></td>
<td>$\log_4 1024 = 5$</td>
</tr>
<tr>
<td>e)</td>
<td></td>
<td>$\log_{25} 125 = \frac{3}{2}$</td>
</tr>
<tr>
<td>f)</td>
<td></td>
<td>$\log_3 1200 = 2x$</td>
</tr>
</tbody>
</table>
3. Compute each of the following logarithms and verify your result with an exponential “because” statement.

<table>
<thead>
<tr>
<th>Logarithmic expression</th>
<th>Exponential form</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) $\log_5 1 =</td>
<td>because</td>
</tr>
<tr>
<td>b) $\log_7 7 =</td>
<td>because</td>
</tr>
<tr>
<td>c) $\log_3 3^2 =</td>
<td>because</td>
</tr>
<tr>
<td>d) $\log_4 0 =</td>
<td>because</td>
</tr>
</tbody>
</table>

4. Compute each of the following logarithms and verify your result with an exponential “because” statement.

<table>
<thead>
<tr>
<th>Logarithmic expression</th>
<th>Exponential form</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) $\log_4 16 =</td>
<td>because</td>
</tr>
<tr>
<td>b) $\log_2 32 =</td>
<td>because</td>
</tr>
<tr>
<td>c) $\log_5 125 =</td>
<td>because</td>
</tr>
<tr>
<td>d) $\log 100 =</td>
<td>because</td>
</tr>
</tbody>
</table>
5. Compute each of the following logarithms and verify your result with an exponential “because” statement.

<table>
<thead>
<tr>
<th>Logarithmic expression</th>
<th>Exponential form</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) $\log_{6} 1$ =</td>
<td>because</td>
</tr>
<tr>
<td>b) $\log_{2} \sqrt{2}$ =</td>
<td>because</td>
</tr>
<tr>
<td>c) $\log_{3} \frac{1}{9}$ =</td>
<td>because</td>
</tr>
<tr>
<td>d) $\log_{4} 2$ =</td>
<td>because</td>
</tr>
</tbody>
</table>
### Section 7.2: Computing Logarithms

6. Use the table below to determine what two integers the logarithms lie between.

<table>
<thead>
<tr>
<th>x</th>
<th>−3</th>
<th>−2</th>
<th>−1</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>$2^x$</td>
<td>0.125</td>
<td>0.25</td>
<td>0.50</td>
<td>1</td>
<td>2</td>
<td>4</td>
<td>8</td>
<td>16</td>
<td>32</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Value</th>
<th>Lies Between what Outputs?</th>
<th>Logarithm</th>
<th>Lies Between what inputs?</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) 14.23</td>
<td>8 and 16</td>
<td>$\log_2(14.23)$</td>
<td>3 and 4</td>
</tr>
<tr>
<td>b) 2.7</td>
<td>$\log_2(2.7)$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>c) 9.45</td>
<td>$\log_2(9.45)$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>d) 0.20</td>
<td>$\log_2(0.20)$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>e) 0.73</td>
<td>$\log_2(0.73)$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>f) 30</td>
<td>$\log_2(30)$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>g) 10</td>
<td>$\log_2(10)$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>h) 12.26</td>
<td>$\log_2(12.26)$</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
7. Use the change of base formula to rewrite the logarithm using base 10 logarithms. Then use your calculator to evaluate the logarithm. Round your result to three decimal places.

<table>
<thead>
<tr>
<th></th>
<th>Logarithm</th>
<th>Rewrite using Change of Base Formula</th>
<th>Evaluate on Calculator</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>( \log_2(12.26) )</td>
<td>( \frac{\log(12.26)}{\log 2} )</td>
<td>3.616</td>
</tr>
<tr>
<td>b)</td>
<td>( \log_6(19) )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>c)</td>
<td>( \log_{12}(100) )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>d)</td>
<td>( \log_{17}(83) )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>e)</td>
<td>( \log_{4.3}\left(\frac{100}{89}\right) )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>f)</td>
<td>( \log_{\frac{1}{2}}(8) )</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
8. Graph \( g(x) = \log_2 x \) on your graphing calculator. Fill in the table below and plot the points on the grid. Use these points to sketch an accurate graph.

<table>
<thead>
<tr>
<th>( x )</th>
<th>( g(x) = \log_2 x )</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.50</td>
<td></td>
</tr>
<tr>
<td>1</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td></td>
</tr>
<tr>
<td>8</td>
<td></td>
</tr>
</tbody>
</table>

9. Graph \( g(x) = \log_5 x \) on your graphing calculator. Fill in the table below and plot the points on the grid. Use these points to sketch an accurate graph.

<table>
<thead>
<tr>
<th>( x )</th>
<th>( g(x) = \log_5 x )</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.20</td>
<td></td>
</tr>
<tr>
<td>1</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td></td>
</tr>
</tbody>
</table>
10. Determine the following for the function \( g(x) = \log x \).

<table>
<thead>
<tr>
<th>Function Feature</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Domain</td>
<td></td>
</tr>
<tr>
<td>b) Range</td>
<td></td>
</tr>

</tbody>
</table>
Section 7.4: Solving Logarithmic Equations

13. Solve each Logarithmic equation for $x$. Show complete work. Check your answer. Write your answer in exact form and in approximate form by rounding to three decimal places.

   a) $\log_5 x = 4$
   b) $\log_6 x = -3$

   c) $2\log_7 x = 8$
   d) $4 + 2\log_7 x = 8$
14. Solve each Logarithmic equation for $x$. Show complete work. Check your answer. Write your answer in exact form and in approximate form by rounding to three decimal places.

a) $8 - 2\log_7 x = 10$

b) $\log_3(x + 4) = 2$

c) $8\log_3(x - 2) = 48$

d) $2 - 3\log_4(x + 10) = -13$
Section 7.5: Solving Exponential Equations

15. Solve each exponential equation for $x$. Show complete work and check your answer using a graphical process and a numerical one. Write your final answer in both exact form and rounded form (to three decimal places).

   a) $2^x = 12$

   b) $(1.23)^x = 27$

   c) $5(4)^x = 25$

   d) $4 + 3^x = 8$
16. Solve each exponential equation for $x$. Show complete work and check your answer using a graphical process and a numerical one. Write your final answer in both exact form and rounded form (to three decimal places).

a) $8 - 2(6.2)^x = -10$

b) $3^{x+2} = 18$

c) $6(2)^{x-2} = 24$

d) $5 + 4^{2x} = 68$
17. Show complete work for all parts of this problem. Write all answers in exact form and in decimal form (rounded to the nearest hundredth).

Suppose an investment is growing at a rate of 8% per year. Determine the doubling time for this investment if the starting value is

a) $1000
b) $3300

c) $5000
d) $1,000,000

e) Compare your answers for parts a) through d). Explain why this occurs.
18. Show complete work for all parts of this problem. Write all answers in exact form and in decimal form (rounded to the nearest hundredth).

The body metabolizes caffeine at a rate of about 14% per hour. Determine the half-life of caffeine in the body if you consume

a) One can of Coke Zero, which contains about 40mg of caffeine

b) A cup of coffee, which contains about 100mg of caffeine

c) One can of Monster Energy drink, which contains about 160mg of caffeine.

d) Compare your answers for parts a) through c). Explain why this occurs.
Lesson 7 – Logarithms and Logarithmic Functions

19. The Richter scale was developed by Charles Richter of the California Institute of Technology in 1935. A single number, called the magnitude, is assigned to quantify the amount of seismic energy released by an earthquake. The magnitude, $M$, of an earthquake on the Richter scale can be approximated by the formula $M = \log(I)$ where $I$ is the intensity of the earthquake, measured by a seismograph located 8 km from the epicenter (using the Lillie Empirical Formula).

Example 1: If an earthquake has an intensity of 100 then the magnitude would be $M = \log(100)$. Entering it into the calculator, we find that the magnitude of the earthquake is 2.

Example 2: If an earthquake has a magnitude of 4.5 (M=4.5), the intensity would be calculated by solving $4.5 = \log(I)$. We can rewrite this as an exponent. The new formula would be $10^{4.5} = I$ or $I = 31,622.8$.

a) The intensity of an earthquake with magnitude 6 on the Richter scale is ______________ times greater than an earthquake with magnitude 5.

b) The intensity of an earthquake with magnitude 7 on the Richter scale is ______________ times greater than an earthquake with magnitude 5.

c) On March 27, 1964, Anchorage, Alaska was hit by an earthquake with Magnitude 8.5. Determine the intensity of this earthquake.

d) Earthquakes that measure less than 3 on the Richter scale are known as microquakes, and are not felt by humans. Determine the intensity of an earthquake with a magnitude of 3.

e) A major earthquake is the one which registers more than 7 on the Richter scale. Determine the intensity of an earthquake with a magnitude of 7.
20. In Chemistry, the pH of a substance can be determined using the formula $pH = -\log[H^+]$ where $H^+$ is the hydrogen ion concentration of the substance. Solutions with a pH less than 7 are said to be acidic and solutions with a pH greater than 7 are basic or alkaline. The table below presents the pH values of some common substances.

<table>
<thead>
<tr>
<th>pH Level</th>
<th>Substance</th>
</tr>
</thead>
<tbody>
<tr>
<td>13</td>
<td>Bleach</td>
</tr>
<tr>
<td>12</td>
<td>Soapy Water</td>
</tr>
<tr>
<td>11</td>
<td>Ammonia Solution</td>
</tr>
<tr>
<td>10</td>
<td>Milk of Magnesia</td>
</tr>
<tr>
<td>9</td>
<td>Baking Soda</td>
</tr>
<tr>
<td>8</td>
<td>Sea Water</td>
</tr>
<tr>
<td>7</td>
<td>Distilled Water</td>
</tr>
<tr>
<td>6</td>
<td>Urine</td>
</tr>
<tr>
<td>5</td>
<td>Black Coffee</td>
</tr>
<tr>
<td>4</td>
<td>Tomato Juice</td>
</tr>
<tr>
<td>3</td>
<td>Orange Juice</td>
</tr>
<tr>
<td>2</td>
<td>Lemon Juice</td>
</tr>
<tr>
<td>1</td>
<td>Gastric Acid</td>
</tr>
</tbody>
</table>

a) Determine the hydrogen ion (H+) concentration of distilled water.

b) Determine the hydrogen ion (H+) concentration of black coffee.

c) If the water in your swimming pool has a hydrogen ion concentration of .000001 what would the pH level be? (Just for fun, should you be concerned?)

d) The hydrogen ion concentration of lemon juice is ________________ times greater than the hydrogen ion concentration of orange juice.

e) **Challenge:** The hydrogen ion concentration of Gastric acid is ________________ times greater than the hydrogen ion concentration of Tomato juice.
Lesson 7 Assessment

1. Complete the table below.

<table>
<thead>
<tr>
<th>Exponential Form</th>
<th>Logarithmic Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>$4^0 = 1$</td>
<td>$\log 1000 = 3$</td>
</tr>
</tbody>
</table>

2. Evaluate each of the following logarithms.

   a) $\log_3 1 =$

   b) $\log_3 \left( \frac{1}{3} \right) =$

   c) $\log_2 2 =$

   d) $\log_8 (64) =$

   e) $\log_5 \left( \frac{1}{25} \right) =$

   f) $\log \sqrt[3]{10} =$

3. Solve the following equations. Simplify your answers. Where applicable, give both the exact answer and the decimal approximation rounded to three decimal places. Show all algebraic work.

   a) $8 - 2 \log_7 x = 10$

   b) $1000(1.12)^x = 2000$
4. Consider the function \( g(x) = \log_{3} x \):

a) Graph \( g(x) \) on your graphing calculator. Use window \( x: [0..10] \) and \( y: [-2..2] \). In the space below, draw what you see on your calculator screen.

b) What is the domain of \( g(x) \)?

c) What is the range of \( g(x) \)?

d) For what values of \( x \) is \( g(x) \) positive?

e) For what values of \( x \) is \( g(x) \) negative?

f) For what values of \( x \) is \( g(x) \) increasing?

g) What is the vertical intercept?

h) What is the horizontal intercept?

i) Give the equation of the vertical asymptote for \( g(x) \).

j) For what value of \( x \) is \( g(x) = 1 \)?

k) For what value of \( x \) is \( g(x) = 3 \)?

l) Determine \( g(42) \). Round your answer to three decimal places.
Lesson 8 – Introduction to Quadratic Functions

We are leaving exponential and logarithmic functions behind and entering an entirely different world. As you work through this lesson, you will learn to identify quadratic functions and their graphs (called parabolas). You will learn the important parts of the parabola including the direction of opening, the vertex, intercepts, and axis of symmetry.

You will use graphs of quadratic functions to solve equations and, finally, you will learn how to recognize all the important characteristics of quadratic functions in the context of a specific application. Even if a problem does not ask you to graph the given quadratic function or equation, doing so is always a good idea so that you can get a visual feel for the problem at hand.

Lesson Topics

Section 8.1: Characteristics of Quadratic Functions
- Identify the Vertical Intercept
- Determine the Vertex
- Domain and Range
- Determine the Horizontal Intercepts (Graphically)

Section 8.2: Solving Quadratic Equations Graphically

Section 8.3: Characteristics of Logarithmic Functions
- Use the Change of Base Formula to graph a logarithmic function and identify important characteristics of the graph.

Section 8.4: Quadratic Regression

Mini-Lesson 8

Section 8.1 – Characteristics of Quadratic Functions

A QUADRATIC FUNCTION is a function of the form

\[ f(x) = ax^2 + bx + c \]

Characteristics Include:
- Three distinct terms each with its own coefficient:
  - An \( x^2 \) term with coefficient \( a \)
  - An \( x \) term with coefficient \( b \)
  - A constant term, \( c \)
  - Note: If any term is missing, the coefficient of that term is 0
- The graph of this function is called a “parabola”, is shaped like a “U”, and opens either up or down
- \( a \) determines which direction the parabola opens (\( a > 0 \) opens up, \( a < 0 \) opens down)
- \( c \) is the vertical intercept with coordinates \((0, c)\)

<table>
<thead>
<tr>
<th>Problem 1</th>
<th>WORKED EXAMPLE – GRAPH QUADRATIC FUNCTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Given the Quadratic Function ( f(x) = x^2 + 4x - 2 ), complete the table and generate a graph of the function.</td>
<td></td>
</tr>
</tbody>
</table>

| Identity the coefficients \( a, b, c \) | \( a = 1, \quad b = 4, \quad c = -2 \) |
| Which direction does the parabola open? | \( a = 1 \) which is greater than 0 so parabola opens up |
| What is the vertical intercept? | \( c = -2 \) so vertical intercept = \((0, -2)\) |
Problem 2  MEDIA EXAMPLE – GRAPH QUADRATIC FUNCTIONS

Given the Quadratic Function \( f(x) = x^2 - 2x + 3 \), complete the table and generate a graph of the function.

<table>
<thead>
<tr>
<th>Identity the coefficients ( a, b, c )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Which direction does the parabola open? Why?</td>
</tr>
<tr>
<td>What is the vertical intercept?</td>
</tr>
</tbody>
</table>

Problem 3  YOU TRY – GRAPH QUADRATIC FUNCTIONS

Given the Quadratic Function \( f(x) = 2x^2 - 5 \), complete the table and generate a graph of the function.

<table>
<thead>
<tr>
<th>Identity the coefficients ( a, b, c )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Which direction does the parabola open? Why?</td>
</tr>
<tr>
<td>What is the vertical intercept?</td>
</tr>
<tr>
<td>Plot and label on the graph.</td>
</tr>
</tbody>
</table>
Given a quadratic function, \( f(x) = ax^2 + bx + c \):

The VERTEX is the lowest or highest point (ordered pair) of the parabola:

- To find the input value, identify coefficients \( a \) and \( b \) then compute \(-\frac{b}{2a}\).
- Plug this input value into the function to determine the corresponding output value, (i.e. evaluate \( f\left(-\frac{b}{2a}\right)\)).
- The Vertex is always written as an ordered pair. \( \text{Vertex} = \left(-\frac{b}{2a}, f\left(-\frac{b}{2a}\right)\right) \)

The AXIS OF SYMMETRY is the vertical line that passes through the Vertex, dividing the parabola in half:

- Equation \( x = -\frac{b}{2a} \)

### Problem 4  WORKED EXAMPLE – Quadratic Functions: Vertex/Axis Of Symmetry

Given the Quadratic Function \( f(x) = x^2 + 4x - 2 \), complete the table below.

<table>
<thead>
<tr>
<th>Identity the coefficients ( a, b, c )</th>
<th>( a = 1, \ b = 4, \ c = -2 )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input Value ( x = -\frac{b}{2a} )</td>
<td>Output Value ( f(-2) = (-2)^2 + 4(-2) - 2 )</td>
</tr>
<tr>
<td></td>
<td>( = 4 - 8 - 2 )</td>
</tr>
<tr>
<td></td>
<td>( = -6 )</td>
</tr>
</tbody>
</table>

Vertex Ordered Pair: \((-2, -6)\)

<table>
<thead>
<tr>
<th>Identify the Axis of Symmetry Equation.</th>
<th>Axis of Symmetry: ( x = -2 )</th>
</tr>
</thead>
</table>

| Sketch the Graph                      |                               |
|                                        |                               |
### Problem 5  MEDIA EXAMPLE – Quadratic Functions: Vertex/Axis Of Symmetry

Given the Quadratic Function \( f(x) = x^2 - 2x + 3 \), complete the table, generate a graph of the function, and plot/label the vertex and axis of symmetry on the graph.

<table>
<thead>
<tr>
<th>Identity the coefficients ( a, b, c )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Determine the coordinates of the Vertex.</td>
</tr>
<tr>
<td>Identify the Axis of Symmetry Equation.</td>
</tr>
</tbody>
</table>
| Graph of the function. Plot/label the vertex and axis of symmetry on the graph. | ![Graph](image)

### Problem 6  YOU TRY – Quadratic Functions: Vertex/Axis Of Symmetry

Given the Quadratic Function \( f(x) = 2x^2 - 5 \), complete the table, generate a graph of the function, and plot/label the vertex and axis of symmetry on the graph.

<table>
<thead>
<tr>
<th>Identity the coefficients ( a, b, c )</th>
</tr>
</thead>
<tbody>
<tr>
<td>Determine the coordinates of the Vertex.</td>
</tr>
<tr>
<td>Identify the Axis of Symmetry Equation.</td>
</tr>
</tbody>
</table>
| Graph of the function. Plot/label the vertex and axis of symmetry on the graph. | ![Graph](image)
Problem 7 | WORKED EXAMPLE – Quadratic Functions: Domain and Range

Determine the Domain and Range of the Quadratic Function \( f(x) = x^2 + 4x - 2 \)

**Domain of \( f(x) \):**
All real numbers. \(-\infty < x < \infty\) \((-\infty, \infty)\)

**Range of \( f(x) \):**
Since the parabola opens upwards, the vertex \((-2, -6)\) is the *lowest* point on the graph.
The Range is therefore \(-6 \leq f(x) < \infty\), or \([-6, \infty)\)

Problem 8 | MEDIA EXAMPLE – Quadratic Functions: Domain and Range

Determine the Domain and Range of \( f(x) = -2x^2 - 6 \).

**Domain of \( f(x) \):**

**Range of \( f(x) \):**
**Problem 9**

**YOU TRY – Quadratic Functions: Domain and Range**

Determine the Domain and Range of $f(x) = 2x^2 - 5$. Sketch the graph and label the vertex.

Vertex ordered pair:

Domain of $f(x)$:

Range of $f(x)$:

**Finding Horizontal Intercepts of a Quadratic Function**

The quadratic function, $f(x) = ax^2 + bx + c$, will have horizontal intercepts when the graph crosses the $x$-axis (i.e. when $f(x) = 0$). These points are marked on the graph above as G and H. To find the coordinates of these points, what we are really doing is solving the equation $ax^2 + bx + c = 0$.

At this point, we will use the following general calculator process. In the next lesson, we will learn other methods for solving these equations.

Calculator Process to solve $ax^2 + bx + c = 0$

1. Press Y= then enter $f(x)$ into Y1
2. Enter 0 into Y2
3. Use the graphing/intersection method once to determine G and again to determine H.
Problem 10 WORKED EXAMPLE – Finding Horizontal Intercepts of a Quadratic Function

Find the horizontal intercepts of \( f(x) = x^2 + 4x - 2 \) and plot/label them on the graph.

1. Press Y= then enter \( x^2 + 4x - 2 \) into Y1
2. Enter 0 into Y2
3. Use the graphing/intersection method once to determine G as (–4.45, 0). You may have to move your cursor close to G during the “First Curve?” part.
4. Use the graphing/intersection method again to determine H as (0.45, 0). You may have to move your cursor close to H during the “First Curve?” part.

Problem 11 MEDIA EXAMPLE – Finding Horizontal Intercepts of a Quadratic Function

Given the Quadratic Function \( f(x) = x^2 - x - 6 \), find the horizontal intercepts and plot/label them on the graph. Round to 2 decimals.
Problem 12  YOU TRY – Finding Horizontal Intercepts of a Quadratic Function

Given the Quadratic Function $f(x) = 2x^2 - 5$, find the vertex, vertical intercept, and horizontal intercepts. Plot and label all of these points on the graph. Round your values to two decimals.

Vertex: (______, ______)

Vertical Intercept: (______, ______)

Horizontal Intercepts:

(______, _____) and (______, _____)
A quadratic equation of the form \( ax^2 + bx + c = d \) can be solved in the following way using your graphing calculator:

1. Go to \( Y= \)
2. Let \( Y1 = ax^2 + bx + c \)
3. Let \( Y2 = d \)
4. Graph the two equations. You may need to adjust your window to be sure the intersection(s) is/are visible.
5. For each intersection, use 2nd>Calc>Intersect. Follow on-screen directions to designate each graph then determine intersection (hitting Enter each time).
6. Solution(s) to the equation are the intersecting \( x \)-values

NOTE: The Intersection method will provide us only with approximate solutions to a quadratic equation when decimal solutions are obtained. To find EXACT solution values, you will need to use the Quadratic Formula. This will be covered in the next lesson.

**Problem 13**  WORKED EXAMPLE – Solve Quadratic Equations Graphically

Solve the equation \(-3x^2 - 2x - 4 = -5\) by graphing.

There are two intersection points. Follow the process above to find the intersections \((-1, -5)\) and \((0.33, -5)\). Solutions to the equation are \(x = -1\) and \(x = 0.33\).

**Problem 14**  MEDIA EXAMPLE – Solve Quadratic Equations Graphically

Solve \(x^2 - 10x + 1 = 4\). Plot and label the graphs and intersection points that are part of your solution process. Identify the final solutions clearly. Round to 2 decimals.

\[
\begin{align*}
X_{\text{min}}: & \quad \_ \_ \\
X_{\text{max}}: & \quad \_ \_ \\
Y_{\text{min}}: & \quad \_ \_ \\
Y_{\text{max}}: & \quad \_ \_
\end{align*}
\]
Problem 15  YOU TRY – Solve Quadratic Equations Graphically

a) Solve \(2x^2 - 5 = 6\). Plot and label the graphs and intersection points that are part of your solution process. Round your answer to the nearest hundredth. Identify the final solutions clearly.

\[
\begin{align*}
X_{\text{min}}: & \quad \_\_\_\_ \\
X_{\text{max}}: & \quad \_\_\_\_ \\
Y_{\text{min}}: & \quad \_\_\_\_ \\
Y_{\text{max}}: & \quad \_\_\_\_
\end{align*}
\]

b) Solve \(x^2 + 9x - 18 = 32\). Plot and label the graphs and intersection points that are part of your solution process. Round your answer to the nearest hundredth. Identify the final solutions clearly.

\[
\begin{align*}
X_{\text{min}}: & \quad \_\_\_\_ \\
X_{\text{max}}: & \quad \_\_\_\_ \\
Y_{\text{min}}: & \quad \_\_\_\_ \\
Y_{\text{max}}: & \quad \_\_\_\_
\end{align*}
\]
A large number of quadratic applications involve launching objects into the sky (arrows, baseballs, rockets, etc…) or throwing things off buildings or spanning a distance with an arched shape. While the specifics of each problem are certainly different, the information below will guide you as you decipher the different parts.

HOW TO SOLVE QUADRATIC APPLICATION PROBLEMS

1. Draw an accurate graph of the function using first quadrant values only. Label the $x$-axis with the input quantity and units. Label the $y$-axis with the output quantity and units.
2. Identify, plot, and label the vertical intercept.
3. Identify, plot, and label the vertex.
4. Identify, plot, and label the positive horizontal intercept(s) (usually, there is only one horizontal intercept that we care about…if both are needed for some reason, then plot them both and include negative input values in your graph for part 1).
5. Once you have done steps 1 – 4, THEN read the specific questions you are asked to solve.

Questions that involve the vertical intercept $(0, c)$:
- How high was the object at time $t = 0$? $c$
- What was the starting height of the object? $c$

Questions that involve the vertex $\left( -\frac{b}{2a}, f \left( -\frac{b}{2a} \right) \right)$:
- How high was the object at its highest point? $f \left( -\frac{b}{2a} \right)$
- What was the max height of the object? $f \left( -\frac{b}{2a} \right)$
- How long did it take the object to get to its max height? $-\frac{b}{2a}$
- What is the practical range of this function? $0 \leq f(x) \leq f \left( -\frac{b}{2a} \right)$

Questions that involve (usually) the positive horizontal intercept $(x_2, 0)$:
- When did the object hit the ground? $x_2$
- What is the practical domain of this function? $0 \leq x \leq x_2$
- How long did it take the object to hit the ground? $x_2$
- How far was the object from the center? $x_2$
Problem 16 | WORKED EXAMPLE – APPLICATIONS OF QUADRATIC FUNCTIONS

The function \( h(t) = -16t^2 + 80t + 130 \), where \( h(t) \) is height in feet, models the height of an arrow shot into the sky as a function of time (seconds).

Before even LOOKING at the specific questions asked, find the following items and plot/label the graph.

1. Identify the vertical intercept. \((0, 130)\) since \( c = 130 \).

2. Determine the vertex.

   The input value of the vertex is \( x = \frac{-b}{2a} = \frac{-80}{2(-16)} = 2.5 \).

   The corresponding output value is \( f(2.5) = -16(2.5)^2 + 80(2.5) + 130 = 230 \)

3. Determine the positive horizontal intercept – using the process discussed in earlier examples, we want to solve \(-16t^2 + 80t + 130=0\). Using the intersect method, the positive horizontal intercept is \((6.29, 0)\).

4. Draw an accurate graph of the function using first quadrant values only. Label the horizontal axis with the input quantity and units. Label the vertical axis with the output quantity and units. Label the vertex and intercepts.

QUESTIONS TO ANSWER NOW:

a) After how many seconds does the arrow reach its highest point?
   
   The input value of the vertex is 2.5. So, the arrow reaches its highest point after 2.5 seconds.

b) How high is the arrow at its highest point?
   
   The output value of the vertex is 230. So, the arrow is 230 feet above the ground at its highest point.

c) After how many seconds does the arrow hit the ground?
   
   The horizontal intercept is \((6.29, 0)\). The arrow will hit the ground after 6.29 seconds.

d) What is the practical domain of this function?
   
   Time starts at 0 seconds and goes until the arrow hits the ground. So, practical domain is \(0 \leq t \leq 6.29\) seconds.

e) What is the practical range of this function?
   
   The arrow passes through all height values from 0 (when it hits the ground) to its max height of 230 ft. So, practical range is \(0 \leq h(t) \leq 230\) feet.

f) What does the vertical intercept represent?
   
   The vertical intercept represents the height of the arrow at time \( t = 0 \). Thus, the arrow starts at 130 feet off the ground.
Problem 17  MEDIA EXAMPLE – APPLICATIONS OF QUADRATIC FUNCTIONS

A train tunnel is modeled by the quadratic function \( h(x) = -0.35x^2 + 25 \), where \( x \) is the distance, in feet, from the center of the tracks and \( h(x) \) is the height of the tunnel, also in feet. Assume that the high point of the tunnel is directly in line with the center of the train tracks.

a) Draw a complete diagram of this situation. Find and label each of the following: vertex, horizontal intercept (positive side), and vertical intercept.

b) How wide is the base of the tunnel?

c) A train with a flatbed car 6 feet off the ground is carrying a large object that is 15 feet high. How much room will there be between the top of the object and the top of the tunnel?

Lesson 8 Practice Problems

Section 8.1: Characteristics of Quadratic Functions

1. For each of the following quadratic functions:
   - Identify the coefficients \(a, b, c\)
   - Determine if the parabola opens up or down and state why.
   - Graph the function on your calculator. Draw the graph neatly below.
   - Identify the vertical-intercept.
   - Mark and label the vertical intercept on the graph.

   a) \(f(x) = 2x^2 - 4x - 4\)

      \[ a = \underline{\hspace{2cm}} \quad b = \underline{\hspace{2cm}} \quad c = \underline{\hspace{2cm}} \]

      Vertical Intercept: \(\underline{\hspace{2cm}}\)

      Which direction does this parabola open? Why?

   b) \(f(x) = -x^2 + 6x - 4\)

      \[ a = \underline{\hspace{2cm}} \quad b = \underline{\hspace{2cm}} \quad c = \underline{\hspace{2cm}} \]

      Vertical Intercept: \(\underline{\hspace{2cm}}\)

      Which direction does this parabola open? Why?

   c) \(f(x) = 2x^2 - 6x + 4\)

      \[ a = \underline{\hspace{2cm}} \quad b = \underline{\hspace{2cm}} \quad c = \underline{\hspace{2cm}} \]

      Vertical Intercept: \(\underline{\hspace{2cm}}\)

      Which direction does this parabola open? Why?
d) \( f(x) = x^2 - 3x \)

\[ a = \underline{\phantom{0}} \quad b = \underline{\phantom{0}} \quad c = \underline{\phantom{0}} \]

Vertical Intercept: \( \underline{\phantom{0}} \)

Which direction does this parabola open? Why?

\[ \]

Section 8.2: Solving Quadratic Equations Graphically

5. Solve each equation using your calculator. Draw the graph and plot/label the point(s) of intersection. Clearly identify the final solution(s).

a) \( x^2 - x - 6 = 0 \)

b) \( x^2 - 9x + 10 = -4 \)

c) \( x^2 - 8 = 1 \)
6. Solve each equation using your calculator. Draw the graph and plot/label the point(s) of intersection. Clearly identify the final solution(s).

a) \(-x^2 + 6x - 4 = -10\)

b) \(\frac{3}{2}x^2 - 6x + 6 = 10\)

c) \(5x^2 + \frac{x}{2} - 5 = 8\)
Section 8.3: Applications of Quadratic Functions

7. The function \( h(t) = -0.2t^2 + 1.3t + 15 \), where \( h(t) \) is height in feet, models the height of an “angry bird” shot into the sky as a function of time (seconds).

   a) Draw a complete diagram of this situation. Find and label each of the following: vertex, horizontal intercept (positive side), and vertical intercept.

   b) How high above the ground was the bird when it was launched?

   c) After how many seconds does the bird reach its highest point?

   d) How high is the angry bird at its highest point?

   e) After how many seconds does the angry bird hit the ground?

   f) If the bird is traveling at 15 feet per second, how far does the angry bird travel before it hit the ground?

   g) Determine the practical domain of this function.

   h) Determine the practical domain and practical range of this function.
8. A company’s revenue earned from selling $x$ items is given by the function $R(x) = 680x$, and cost is given by $C(x) = 10000 + 2x^2$.

a) Write a function, $P(x)$, that represents the company’s profit from selling $x$ items.

b) Identify the vertical intercept of $P(x)$. Write it as an ordered pair and interpret its meaning in a complete sentence.

c) How many items must be sold in order to maximize the profit?

d) What is the maximum profit?

e) How many items does this company need to sell in order to break even?

f) Determine the practical domain and practical range of this function.
9. An arrow is shot straight up into the air. The function \( H(t) = -16t^2 + 90t + 6 \) gives the height (in feet) of an arrow after \( t \) seconds. Round answers to two decimal places as needed. All answers must include appropriate units of measure.

a) How long does it take for the arrow to reach its maximum height? Write your answer in a complete sentence.

b) Determine the maximum height of the arrow. Write your answer in a complete sentence.

c) How long does it take for the arrow to hit the ground? Write your answer in a complete sentence.

d) Identify the vertical intercept. Write it as an ordered pair and interpret its meaning in a complete sentence.

e) Determine the practical domain of \( H(t) \). Use proper notation.

f) Determine the practical range of \( H(t) \). Use proper notation.
g) Use your graphing calculator to create a good graph of $H(t)$. Use the practical domain and range to determine an appropriate viewing window. In the space below, sketch what you see on your calculator screen, and indicate the window you used.

\[
\begin{array}{c}
X_{\text{min}}: \underline{\quad} \\
X_{\text{max}}: \underline{\quad} \\
Y_{\text{min}}: \underline{\quad} \\
Y_{\text{max}}: \underline{\quad}
\end{array}
\]

h) Determine $H(3)$. Write a sentence explaining the meaning of your answer in the context of the arrow.

i) Use your graphing calculator to solve the equation $H(t) = 80$. Write a sentence explaining the meaning of your answer in the context of the arrow.
Section 8.4: Quadratic Regression

10. Fireworks were shot from a launching tower at an initial velocity of 70 feet per second. The data below show the height of the fireworks for varying amounts of time (in seconds).

d) Identify the vertex of the function found in part a) and interpret its meaning in a complete sentence. Round to the nearest item and the nearest cent.

e) How many items does this company need to sell in order to break even? Write your answer in a complete sentence. Round UP to the nearest item.
Lesson 8 Assessment

1. Fill out the following table. Intercepts must be written as ordered pairs. Always use proper notation. Round to two decimal places.

<table>
<thead>
<tr>
<th></th>
<th>( f(x) = 2x^2 - 4x - 30 )</th>
<th>( g(x) = 5 - x^2 )</th>
<th>( y = 5x^2 - 4x + 17 )</th>
</tr>
</thead>

</tbody>
</table>
2. The function \( H(t) = -16t^2 + 88t \) gives the height (in feet) of golf ball after \( t \) seconds. Round answers to two decimal places as needed. All answers must include appropriate units of measure.

a) Determine the maximum height of the golf ball. Show your work. Write your answer in a complete sentence.

b) How long does it take for the ball to hit the ground? Show your work. Write your answer in a complete sentence.

c) Identify the vertical intercept. Write it as an ordered pair and interpret its meaning in a complete sentence.

d) Determine the practical domain of \( H(t) \). Use proper notation and include units.

e) Determine the practical range of \( H(t) \). Use proper notation and include units.
Lesson 9 – Solving Quadratic Equations

We will continue our work with Quadratic Functions in this lesson and will learn several methods for solving quadratic equations.

Graphing is the first method you will work with to solve quadratic equations followed by factoring and then the quadratic formula. You will get a tiny taste of something called Complex Numbers and then will finish up by putting all the solution methods together.

Pay special attention to the problems you are working with and details such as signs and coefficients of variable terms. Extra attention to detail will pay off in this lesson.

Lesson Topics

Section 9.1: Quadratic Equations in Standard Form
  • Horizontal Intercepts
  • Number and Types of solutions to quadratic equations

Section 9.2: Factoring Quadratic Expressions
  • Factoring out the greatest common factor (GCF)
  • Factoring by trial and error

Section 9.3: Solving Quadratic Equations by Factoring

Section 9.4: The Quadratic Formula

Section 9.5: Complex Numbers

Mini-Lesson 9

Section 9.1 – Quadratic Equations in Standard Form

A QUADRATIC FUNCTION is a function of the form

\[ f(x) = ax^2 + bx + c \]

A QUADRATIC EQUATION in STANDARD FORM is an equation of the form

\[ ax^2 + bx + c = 0 \]

If the quadratic equation \( ax^2 + bx + c = 0 \) has real number solutions \( x_1 \) and \( x_2 \), then the \( x \)-intercepts of \( f(x) = ax^2 + bx + c \) are \((x_1, 0)\) and \((x_2, 0)\).

Note that if a parabola does not cross the \( x \)-axis, then its solutions lie in the complex number system and we say that it has no real \( x \)-intercepts.

There are three possible cases for the number of solutions to a quadratic equation in standard form.

CASE 1: One, repeated, real number solution

The parabola touches the \( x \)-axis in just one location (i.e. only the vertex touches the \( x \)-axis)

CASE 2: Two unique, real number solutions

The parabola crosses the \( x \)-axis at two unique locations.

CASE 3: No real number solutions (but two Complex number solutions)

The parabola does NOT cross the \( x \)-axis.
Problem 1 | MEDIA EXAMPLE – HOW MANY AND WHAT KIND OF SOLUTIONS?

Use your graphing calculator to help you determine the number and type of solutions to each of the quadratic equations below. Begin by putting the equations into standard form. Draw an accurate sketch of the parabola in an appropriate viewing window. IF your solutions are real number solutions, use the graphing INTERSECT method to find them. Use proper notation to write the solutions and the horizontal intercepts of the parabola. Label the intercepts on your graph.

a) \( x^2 - 10x + 25 = 0 \)

\[
\begin{array}{|c|c|c|}
\hline
& & \\
\hline
\end{array}
\]

b) \(-2x^2 + 8x - 3 = 0\)

\[
\begin{array}{|c|c|c|}
\hline
& & \\
\hline
\end{array}
\]

c) \(3x^2 - 2x = -5\)

\[
\begin{array}{|c|c|c|}
\hline
& & \\
\hline
\end{array}
\]
Problem 2  
**YOU TRY – HOW MANY AND WHAT KIND OF SOLUTIONS?**

Use your graphing calculator to help you determine the number and type of solutions to each of the quadratic equations below. Begin by putting the equations into standard form. Draw an accurate sketch of the parabola in an appropriate viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). IF your solutions are real number solutions, use the graphing INTERSECT method to find them. Use proper notation to write the solutions and the horizontal intercepts of the parabola. Label the intercepts on your graph.

a) \(-x^2 - 6x - 9 = 0\)

Real Solutions: __________________________
Section 9.2 – Factoring Quadratic Expressions

So far, we have only used our graphing calculators to solve quadratic equations utilizing the Intersection process. There are other methods to solve quadratic equations. The first method we will discuss is the method of FACTORING. Before we jump into this process, you need to have some concept of what it means to FACTOR using numbers that are more familiar.

Factoring Whole Numbers

To FACTOR the number 60, you could write down a variety of responses some of which are below:

- $60 = 1 \cdot 60$ (not very interesting but true)
- $60 = 2 \cdot 30$
- $60 = 3 \cdot 20$
- $60 = 4 \cdot 3 \cdot 5$

All of these are called FACTORIZATIONS of 60, meaning to write 60 as a product of some of the numbers that divide it evenly.

The most basic factorization of 60 is as a product of its prime factors (remember that prime numbers are only divisible by themselves and 1). The PRIME FACTORIZATION of 60 is:

$$60 = 2 \cdot 2 \cdot 3 \cdot 5$$

There is only one PRIME FACTORIZATION of 60 so we can now say that 60 is COMPLETELY FACTORED when we write it as $60 = 2 \cdot 2 \cdot 3 \cdot 5$.

When we factor polynomial expressions, we use a similar process. For example, to factor the expression $24x^2$, we would first find the prime factorization of 24 and then factor $x^2$.

$$24 = 2 \cdot 2 \cdot 2 \cdot 3 \quad \text{and} \quad x^2 = x \cdot x$$

Putting these factorizations together, we obtain the following:

$$24x^2 = 2 \cdot 2 \cdot 2 \cdot 3 \cdot x \cdot x$$

Let’s see how the information above helps us to factor more complicated polynomial expressions and ultimately leads us to a second solution method for quadratic equations.
Problem 3  WORKED EXAMPLE – Factoring Using GCF Method

Factor $3x^2 + 6x$. Write your answer in completely factored form.

The building blocks of $3x^2 + 6x$ are the terms $3x^2$ and $6x$. Each is written in FACTORED FORM below.

$$3x^2 = 3 \cdot x \cdot x \quad \text{and} \quad 6x = 3 \cdot 2 \cdot x$$

Let’s rearrange these factorizations just slightly as follows:

$$3x^2 = (3 \cdot x) \cdot x \quad \text{and} \quad 6x = (3 \cdot x) \cdot 2$$

We can see that $(3 \cdot x) = 3x$ is a common FACTOR to both terms. In fact, $3x$ is the GREATEST COMMON FACTOR (GCF) to both terms.

Let’s rewrite the full expression with the terms in factored form and see how that helps us factor the expression:

$$3x^2 + 6x = (3 \cdot x) \cdot x + (3 \cdot x) \cdot 2$$

$$= (3x) \cdot x + (3x) \cdot 2$$

$$= (3x)(x + 2)$$

$$= 3x(x + 2)$$

Always CHECK your factorization by multiplying the final result.

$$3x(x + 2) = 3x^2 + 6x$$ CHECKS

Problem 4  MEDIA EXAMPLE – Factoring Using GCF Method

Factor the following quadratic expressions. Write your answers in completely factored form.

a) $11a^2 - 4a$

b) $55w^2 + 5w$

Problem 5  YOU TRY – Factoring Using GCF Method

Factor the following quadratic expression. Write your answers in completely factored form.

a) $64b^2 - 16b$

b) $11c^2 + 7c$
If there is no common factor, then the GCF method cannot be used. Another method used to factor a quadratic expression is shown below.

Factoring a Quadratic Expressions of the form \( x^2 + bx + c \) by TRIAL AND ERROR

\[
x^2 + bx + c = (x + p)(x + q),
\]

where \( b = p + q \) and \( c = p\cdot q \)

### Problem 6 | WORKED EXAMPLE – Factoring Using Trial and Error

Factor the quadratic expression \( x^2 + 5x - 6 \). Write your answer in completely factored form.

**Step 1:** Look to see if there is a common factor in this expression. If there is, then you can use the GCF method to factor out the common factor.

The expression \( x^2 + 5x - 6 \) has no common factors.

**Step 2:** For this problem, \( b = 5 \) and \( c = -6 \). We need to identify \( p \) and \( q \). In this case, these will be two numbers whose product is \(-6\) and sum is \(5\). One way to do this is to list different numbers whose product is \(-6\), then see which pair has a sum of \(5\).

<table>
<thead>
<tr>
<th>Product  = (-6)</th>
<th>Sum  = (5)</th>
</tr>
</thead>
<tbody>
<tr>
<td>(-3 \cdot 2)</td>
<td>No</td>
</tr>
<tr>
<td>(3 \cdot -2)</td>
<td>No</td>
</tr>
<tr>
<td>(-1 \cdot 6)</td>
<td>YES</td>
</tr>
<tr>
<td>(1 \cdot -6)</td>
<td>No</td>
</tr>
</tbody>
</table>

**Step 3:** Write in factored form

\[
x^2 + 5x - 6 = (x + (-1))(x + 6)
\]

\[
x^2 + 5x - 6 = (x - 1)(x + 6)
\]

**Step 4:** Check by foiling.

\[
(x - 1)(x + 6) = x^2 + 6x - x - 6
\]

\[
= x^2 + 5x - 6 \quad \text{CHECKS!}
\]
### Problem 7
**MEDIA EXAMPLE – Factoring Using Trial and Error**

Factor each of the following quadratic expressions. Write your answers in completely factored form. Check your answers.

| a) \( a^2 + 7a + 12 \) | b) \( w^2 + w - 20 \) | c) \( x^2 - 36 \) |

### Problem 8
**YOU TRY – Factoring Using Trial and Error**

Factor each of the following quadratic expressions. Write your answers in completely factored form. Check your answers.

| a) \( n^2 + 8n + 7 \) | b) \( r^2 + 3r - 70 \) | c) \( m^2 - m - 30 \) |
Section 9.3 – Solving Quadratic Equations by Factoring

In this section, we will see how a quadratic equation written in standard form: $ax^2 + bx + c = 0$
can be solved algebraically using FACTORING methods.

<table>
<thead>
<tr>
<th>The Zero Product Principle</th>
</tr>
</thead>
<tbody>
<tr>
<td>If $a \cdot b = 0$, then $a = 0$ or $b = 0$</td>
</tr>
</tbody>
</table>

To solve a Quadratic Equation by FACTORING:

Step 1: Make sure the quadratic equation is in standard form: $ax^2 + bx + c = 0$

Step 2: Write the left side in Completely Factored Form

Step 4: Apply the ZERO PRODUCT PRINCIPLE

Set each linear factor equal to 0 and solve for $x$

Step 5: Verify result by graphing and finding the intersection point(s).

<table>
<thead>
<tr>
<th>Problem 9</th>
<th>WORKED EXAMPLE – Solve Quadratic Equations By Factoring</th>
</tr>
</thead>
</table>

a) Solve by factoring: $5x^2 - 10x = 0$

Step 1: This quadratic equation is already in standard form.

Step 2: Check if there is a common factor, other than 1, for each term (yes...5x is common to both terms)

Step 3: Write the left side in Completely Factored Form

$$5x^2 - 10x = 0$$
$$5x(x - 2) = 0$$

Step 4: Set each linear factor equal to 0 and solve for $x$:

$$5x = 0 \quad \text{OR} \quad x - 2 = 0$$
$$x = 0 \quad \text{OR} \quad x = 2$$

Step 5: Verify result by graphing.
b) Solve by factoring: \( x^2 - 7x + 12 = 2 \)

**Step 1:** Make sure the quadratic is in standard form.
Subtract 3 from both sides to get: \( x^2 - 7x + 10 = 0 \)

**Step 2:** Check if there is a common factor, other than 1, for each term.
Here, there is no common factor.

**Step 3:** Write the left side in Completely Factored Form
\[
x^2 - 7x + 10 = 0 \\
(x + (-5))(x + (-2)) = 0 \\
(x - 5)(x - 2) = 0
\]

**Step 4:** Set each linear factor to 0 and solve for \( x \):
\[
(x - 5) = 0 \quad \text{OR} \quad (x - 2) = 0 \\
x = 5 \quad \text{OR} \quad x = 2
\]

**Step 5:** Verify result by graphing (Let \( Y1 = x^2 - 7x + 12 \), \( Y2 = 2 \))
Problem 10  MEDIA EXAMPLE–Solve Quadratic Equations By Factoring

Solve the equations below by factoring. Show all of your work. Verify your result by graphing.

a) Solve by factoring: $-2x^2 = 8x$

b) Solve by factoring: $x^2 = 3x + 28$

c) Solve by factoring: $x^2 + 5x = x - 3$
Problem 11  YOU TRY – Solving Quadratic Equations by Factoring

Use an appropriate factoring method to solve each of the quadratic equations below. Show all of your work. Be sure to write your final solutions using proper notation. Verify your answer by graphing. Sketch the graph on a good viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). **Mark and label** the solutions on your graph.

a) Solve \( x^2 + 3x = 10 \)

b) Solve \( 3x^2 = 17x \)
Section 9.4 – The Quadratic Formula

The Quadratic Formula can be used to solve quadratic equations written in standard form:

\[ a x^2 + b x + c = 0 \]

The Quadratic Formula:

\[ x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \]

To solve a Quadratic Equation using the QUADRATIC FORMULA:

- Step 1: Make sure the quadratic equation is in standard form: \( ax^2 + bx + c = 0 \)
- Step 2: Identify the coefficients \( a, b, \) and \( c. \)
- Step 4: Substitute these values into the Quadratic Formula
- Step 5: Simplify your result completely.
- Step 6: Verify result by graphing and finding the intersection point(s).

Do you wonder where this formula came from? Well, you can actually derive this formula directly from the quadratic equation in standard form \( ax^2 + bx + c = 0 \) using a factoring method called COMPLETING THE SQUARE. You will not be asked to use COMPLETING THE SQUARE in this class, but go through the information below and try to follow each step.

**How to Derive the Quadratic Formula From \( ax^2 + bx + c = 0 \)**

\[
ax^2 + bx + c = 0
\]

\[ x^2 + \frac{b}{a} x + \frac{c}{a} = 0 \quad \text{[Subtract } c \text{ from both sides then divide all by } a] \]

\[ x^2 + \frac{b}{a} x + \frac{b^2}{4a^2} = -\frac{c}{a} + \frac{b^2}{4a^2} \quad \text{[Take the coefficient of } x, \text{ divide it by 2, square it, and add to both sides]} \]

\[
\left( x + \frac{b}{2a} \right)^2 = -\frac{4ac}{4a^2} + \frac{b^2}{4a^2} \quad \text{[Factor the left side. On the right side, get a common denominator of } 4a^2]} \]

\[
\sqrt{\left( x + \frac{b}{2a} \right)^2} = \sqrt{\frac{b^2 - 4ac}{4a^2}} \quad \text{[Combine the right side to one fraction then take square root of both sides]} \]

\[ x + \frac{b}{2a} = \pm \frac{\sqrt{b^2 - 4ac}}{2a} \quad \text{[Simplify the square roots]} \]

\[ x = -\frac{b}{2a} \pm \frac{\sqrt{b^2 - 4ac}}{2a} \quad \text{[Solve for } x] \]

\[ x = -\frac{b \pm \sqrt{b^2 - 4ac}}{2a} \quad \text{[Combine to obtain the final form for the Quadratic Formula]} \]
Problem 12  WORKED EXAMPLE – Solve Quadratic Equations Using the Quadratic Formula

Solve the quadratic equation by using the Quadratic Formula. Verify your result by graphing and using the Intersection method.

Solve \(3x^2 - 2 = -x\) using the quadratic formula.

Step 1: Write in standard form \(3x^2 + x - 2 = 0\)

Step 2: Identify \(a = 3\), \(b = 1\), and \(c = -2\)

Step 3: \(x = \frac{-(1) \pm \sqrt{(-1)^2 - 4(3)(-2)}}{2(3)} = \frac{-1 \pm \sqrt{1 - (-24)}}{6} = \frac{-1 \pm \sqrt{25}}{6} = \frac{-1 \pm 5}{6}\)

Step 4: Make computations for \(x_1\) and \(x_2\) as below and note the complete simplification process:

\[x_1 = \frac{-1 + \sqrt{25}}{6} = \frac{-1 + 5}{6} = \frac{4}{6} = \frac{2}{3}\] 
\[x_2 = \frac{-1 - \sqrt{25}}{6} = \frac{-1 - 5}{6} = \frac{-6}{6} = -1\]

Final solution \(x = \frac{2}{3}, \ x = -1\)

Step 5: Check by graphing.

Graphical verification of Solution \(x = \frac{2}{3}\)

Graphical verification of Solution \(x = -1\)

[Note that \(\frac{2}{3} \approx 0.6666667\)]

You can see by the graphs above that this equation is an example of the “Case 2” possibility of two, unique real number solutions for a given quadratic equation.
### Problem 13  MEDIA EXAMPLE – Solve Quadratic Equations Using Quadratic Formula
Solve each quadratic equation by using the Quadratic Formula. Verify your result by graphing and using the Intersection method.

Quadratic Formula:  
\[ x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \]

<table>
<thead>
<tr>
<th>a) Solve (-x^2 + 3x + 10 = 0)</th>
</tr>
</thead>
<tbody>
<tr>
<td>b) Solve (2x^2 - 4x = 3)</td>
</tr>
</tbody>
</table>

### Problem 14  YOU TRY – Solve Quadratic Equations Using Quadratic Formula
Solve \(3x^2 = 7x + 20\) using the Quadratic Formula. Show all steps and simplify your answer. Verify your answer by graphing. Sketch the graph on a good viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). **Mark and label** the solutions on your graph.
Section 9.5 – Complex Numbers

Suppose we are asked to solve the quadratic equation \( x^2 = -1 \). Well, right away you should think that this looks a little weird. If I take any real number times itself, the result is always positive. Therefore, there is no REAL number \( x \) such that \( x^2 = -1 \). [Note: See explanation of Number Systems on the next page]

Hmmm…well, let’s approach this using the Quadratic Formula and see what happens.

To solve \( x^2 = -1 \), need to write in standard form as \( x^2 + 1 = 0 \). Thus, \( a = 1 \) and \( b = 0 \) and \( c = 1 \).

Plugging these in to the quadratic formula, I get the following:

\[
x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}
\]

\[
x = \frac{-0 \pm \sqrt{0^2 - 4(1)(1)}}{2(1)} = \frac{\pm \sqrt{-4}}{2} = \frac{\pm 2\sqrt{-1}}{2} = \pm \sqrt{-1}
\]

Well, again, the number \( \sqrt{-1} \) does not live in the real number system nor does the number \( -\sqrt{-1} \) yet these are the two solutions to our equation \( x^2 + 1 = 0 \).

The way mathematicians have handled this problem is to define a number system that is an extension of the real number system. This system is called the Complex Number System and it has, as its base defining characteristic, that equations such as \( x^2 + 1 = 0 \) can be solved in this system. To do so, a special definition is used and that is the definition that:

\[
i = \sqrt{-1}
\]

With this definition, then, the solutions to \( x^2 + 1 = 0 \) are just \( x = i \) and \( x = -i \) which is a lot simpler than the notation with negative under the radical.

When Will We See These Kinds of Solutions?

We will see solutions that involve the complex number “\( i \)” when we solve quadratic equations that never cross the \( x \)-axis. You will see several examples to follow that will help you get a feel for these kinds of problems.

Complex Numbers \( a + bi \)

Complex numbers are an extension of the real number system. Standard form for a complex number is

\[
a + bi
\]

where \( a \) and \( b \) are real numbers,

\[
i = \sqrt{-1}
\]
### Problem 15  WORKED EXAMPLE – Complex Numbers

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>

</tbody>
</table>

Integers: Zero, Counting Numbers and their negatives
\( \{…−5, −4, −3, −2, −1, 0, 1, 2, 3, 4, 5, \ldots\} \)

Whole Numbers: Counting Numbers and Zero
\( \{0, 1, 2, 3, 4, 5, 6, 7, \ldots\} \)

Counting Numbers
\( \{1, 2, 3, 4, 5, 6, 7, \ldots\} \)
Complex numbers are an extension of the real number system. As such, we can perform operations on complex numbers. This includes addition, subtraction, multiplication, and powers.

A complex number is written in the form \(a + bi\), where \(a\) and \(b\) are real numbers and \(i = \sqrt{-1}\).

Extending this definition a bit, we can define \(i^2 = (\sqrt{-1})^2 = \sqrt{-1} \cdot \sqrt{-1} = -1\).

**Problem 16**

<tr>
<td>b)</td>
<td>((10 + 4i)(8 - 5i))</td>
</tr>
</tbody>
</table>
Section 9.6 – Complex Solutions to Quadratic Equations

Work through the following to see how to deal with equations that can only be solved in the Complex Number System.

<table>
<thead>
<tr>
<th>Problem 18</th>
<th>WORKED EXAMPLE – Solving Quadratic Equations with Complex Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solve $2x^2 + x + 1 = 0$ for $x$. Leave results in the form of a complex number, $a+bi$.</td>
<td></td>
</tr>
</tbody>
</table>

First, graph the two equations as Y1 and Y2 in your calculator and view the number of times the graph crosses the x-axis. The graph below shows that the graph of $y = 2x^2 + x + 1$ does not cross the x-axis at all. This is an example of our Case 3 possibility and will result in no Real Number solutions but two unique Complex Number Solutions.

To find the solutions, make sure the equation is in standard form (check).

Identify the coefficients $a = 2$, $b = 1$, $c = 1$.

Insert these into the quadratic formula and simplify as follows:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} = \frac{-1 \pm \sqrt{1 - 8}}{4} = \frac{-1 \pm \sqrt{-7}}{4}$$

Break this into two solutions and use the $a+bi$ form to get

$$x_1 = \frac{-1 + \sqrt{-7}}{4} = \frac{-1}{4} + \frac{\sqrt{-7}}{4} = \frac{-1}{4} + \frac{\sqrt{7}i}{4}$$

and

$$x_2 = \frac{-1 - \sqrt{-7}}{4} = \frac{-1}{4} - \frac{\sqrt{-7}}{4} = \frac{-1}{4} - \frac{\sqrt{7}i}{4}$$

The final solutions are $x_1 = \frac{-1}{4} + \frac{\sqrt{7}i}{4}$, $x_2 = \frac{-1}{4} - \frac{\sqrt{7}i}{4}$.

Remember that $\sqrt{-1} = i$ so $\sqrt{-7} = i\sqrt{7}$.
Problem 19 | MEDIA EXAMPLE – Solving Quadratic Equations with Complex Solutions

Solve $x^2 + 4x + 8 = 1$ for $x$. Leave results in the form of a complex number, $a + bi$.

Problem 20 | YOU TRY – Solving Quadratic Equations with Complex Solutions

Solve $2x^2 - 3x = -5$ for $x$. Leave results in the form of a complex number, $a + bi$. 
Work through the following problem to put the solution methods of graphing, factoring and quadratic formula together while working with the same equation.

**Problem 21 | YOU TRY – SOLVING QUADRATIC EQUATIONS**

Given the quadratic equation $x^2 + 3x - 7 = 3$, solve using the processes indicated below.

a) Solve by graphing (use your calculator and the Intersection process). Sketch the graph on a good viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). **Mark and label** the solutions on your graph.

b) Solve by factoring. Show all steps. Clearly identify your final solutions.

c) Solve using the Quadratic Formula. Clearly identify your final solutions.
Lesson 9 Practice Problems

Section 9.1: Quadratic Equations in Standard Form

1. Use your graphing calculator to help you determine the number and type of solutions to each of the quadratic equations below.
   - Draw an accurate sketch of the graphs indicating the window you used. The vertex and any intercepts or intersection points must appear on the screen.
   - IF your solutions are real number solutions, use the graphing INTERSECT method to find them.
   - Use proper notation to write the solutions and the intercepts.
   - Label the intercepts on your graph.

a) \(x^2 - 6x + 9 = 0\)

   \[
   \begin{array}{c|c}
   X_{\text{min}} &= \_ \\

\end{align*}
\]

Number of Real Solutions: \(\underline{\hphantom{0}}\)

Real Solutions: \(\underline{\hphantom{0}}\)
Section 9.2: Factoring Quadratic Expressions

2. Factor each of the following quadratic expressions. Write your answers in factored form.

   a) \( x^2 + 7x + 6 \)
   
   b) \( 3x^2 + 12x \)

   c) \( x^2 + x - 20 \)
   
   d) \( x^2 - 12x + 11 \)

   e) \( x^2 + 7x + 6 \)
   
   f) \( 3x^2 + 12x \)

   g) \( 20x^2 - 5x \)
   
   h) \( x^2 + 8x \)

   i) \( x^2 - 36 \)
   
   j) \( 3x^2 - 6x + 24 \)
Section 9.3: Solving Quadratic Equations by Factoring

3. Solve each of the following Quadratic Equations by Factoring (GCF). Be sure to write your final solutions using proper notation. Verify your answer by graphing. Sketch the graph on a good viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). **Mark and label** the solutions on your graph.

a) \(4x^2 - 8x = 0\)

b) \(9x^2 - 6x = 0\)

c) \(2x^2 = 4x\)
Lesson 9 - Solving Quadratic Equations

Practice Problems

4. Use the Trial and Error Factoring Method to solve each of the quadratic equations below. Be sure to write your final solutions using proper notation. Verify your answer by graphing. Sketch the graph on a good viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). Mark and label the solutions on your graph.

a) $x^2 + 8x + 12 = 0$

b) $x^2 + 42 = x$

c) $x^2 - 4x = 5$

d) $x^2 - 36 = 0$
5. Use an appropriate factoring method to solve each of the quadratic equations below. Be sure to write your final solutions using proper notation. Verify your answer by graphing. Sketch the graph on a good viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). Mark and label the solutions on your graph.

a) \(9x^2 + 15x = 0\)

b) \(x^2 + 10x - 24 = 0\)

c) \(2x^2 - 4x - 30 = 0\)
Lesson 9 - Solving Quadratic Equations

Section 9.3: The Quadratic Formula

Quadratic Formula: \[ x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \]

6. Solve each quadratic equation by using the Quadratic Formula.
   - Place your given quadratic equation in standard form.
   - Identify the coefficients \(a, b, c\)
   - Substitute these values into the quadratic formula
   - Simplify your result completely then check your solution graphically
   - Mark and label the solutions on your graph.

a) Solve \(2x^2 - 2x - 4 = 0\)  
   (This one is a fill in the blank)

\[ a = \underline{\hspace{2cm}}, \quad b = \underline{\hspace{2cm}}, \quad c = \underline{\hspace{2cm}} \]

\[ x = \frac{-(\underline{\hspace{2cm}}) \pm \sqrt{(\underline{\hspace{2cm}})^2 - 4(\underline{\hspace{2cm}})(\underline{\hspace{2cm}})}}{2(\underline{\hspace{2cm}})} \]

\[ x = \frac{\underline{\hspace{2cm}} \pm \sqrt{(\underline{\hspace{2cm}}) - (\underline{\hspace{2cm}})}}{\underline{\hspace{2cm}}} \]

\[ x = \frac{\underline{\hspace{2cm}} \pm \sqrt{(\underline{\hspace{2cm}})}}{\underline{\hspace{2cm}}} \]

\[ x_1 = \frac{\underline{\hspace{2cm}} + \sqrt{(\underline{\hspace{2cm}})}}{\underline{\hspace{2cm}}} \quad \text{and} \quad x_2 = \frac{\underline{\hspace{2cm}} - \sqrt{(\underline{\hspace{2cm}})}}{\underline{\hspace{2cm}}} \]

\[ x_1 = \frac{\underline{\hspace{2cm}} + \underline{\hspace{2cm}}}{\underline{\hspace{2cm}}} \quad \text{and} \quad x_2 = \frac{\underline{\hspace{2cm}} - \underline{\hspace{2cm}}}{\underline{\hspace{2cm}}} \]

\[ x_1 = \underline{\hspace{2cm}} \quad \text{and} \quad x_2 = \underline{\hspace{2cm}} \]

Final solution \(x = -1, 2\) (Be sure to verify graphically)

Sketch the graph on a good viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). \textbf{Mark and label} any real solutions on the graph.

Xmin = \underline{\hspace{2cm}}

Xmax = \underline{\hspace{2cm}}

Ymin = \underline{\hspace{2cm}}

Ymax = \underline{\hspace{2cm}}
b) \(2x^2 - 5x = 4\)

c) \(4x^2 - 2x = 6\)
d) \( 6x^2 - 4x = 1 \)

e) \(-2x^2 = 3x + 12\)
Section 9.5: Complex Numbers

7. Simplify each of the following and write in the form $a + bi$. To work with $i$ on your calculator, press MODE then change REAL to $a+bi$ by using your arrow keys. The $i$ button is on the bottom row.

a) $\sqrt{-81} =$  
b) $\sqrt{-11} =$

c) $(4 - 2i) - (6 + 8i) =$  
d) $3i(2 - 4i) =$

e) $(3 - i)(2 + i) =$  
f) $(4 - 8i) - 3(4 + 4i) =$

g) $(2 + i)^2 =$  
h) $\frac{4-\sqrt{-8}}{6} =$

i) $\frac{1+\sqrt{-36}}{3} =$  
j) $\frac{2-\sqrt{4-4(2)(5)}}{4} =$
Section 9.6: Complex Solutions to Quadratic Equations

8. Solve the quadratic equations in the complex number system. Leave your final solution in the complex form, $a \pm bi$. Sketch the graph on a good viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). Mark and label any real solutions.

a) $\frac{1}{2}x^2 + 5x + 17 = 0$

b) $x^2 + 2x + 5 = 0$
Lesson 9 - Solving Quadratic Equations

Practice Problems

c) \(4x^2 = -9\)

d) \(-3x^2 + 4x - 7 = 0\)
9. Farmer Treeman wants to plant four crops on his land, Cotton, Corn, Kelp and Currants. He has 40,000 square feet for planting. He needs the length and width of the property to be as shown in the picture below (measured in feet). He determines the equation for the area of his property is \( x^2 + 80x + 1500 = 40000 \)

![Diagram of property with crops](image)

a) What will the length and width of the property need to be? Show your work.

b) Determine the area of each section of the land. Include units in your answers.

Cotton: ___________________  Kelp:_____________________

Currants: _________________  Corn: _________________
Lesson 9 Assessment

1. Factor each of the following quadratic expressions. Write your answers in factored form.
   
   a) \( x^2 - 6x + 8 \)  
   b) \( x^2 + x - 2 \)
   
   c) \( 15x^2 - 3x \)  
   d) \( x^2 - 9 \)

2. Simplify each of the following and write in the form \( a + bi \).
   
   a) \( \sqrt{-9} = \)

   b) \( \frac{8 - \sqrt{-49}}{8} = \)

3. By definition, \( i = \sqrt{-1} \) and \( i^2 = \)
4. Solve the following equations *algebraically* (Factoring or Quadratic Formula). You must show all algebraic steps for full credit. Where applicable, give both the exact answers and the decimal approximations rounded to three decimal places. Write complex solutions in the form \( x = a + bi \) and \( x = a - bi \). Use your calculator to check your answers. Sketch the graph on a good viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). Mark and label any real solutions on the graph.

a) \( 3x^2 + 2x + 3 = 8 \)

b) \( x^2 + 9x + 11 = x - 5 \)

c) \( x^2 + 3x + 7 = 2 \)
Lesson 10 – Radical Functions

In this lesson, we will learn some new properties of exponents, including those dealing with Rational and Radical Roots. We will also revisit complex numbers.

Our function type for this lesson is Radical Functions and you will learn their characteristics, their graphs, and you will solve their equations both graphically and algebraically.

## Mini-Lesson 10

### Section 10.1 – Roots, Radicals, and Rational Exponents

### SQUARE ROOTS

The square root of \( a \) is written as \( \sqrt{a} \). If \( \sqrt{a} = b \) then \( b^2 = a \).

**NOTATION:**

The notation \( \sqrt{a} \) is RADICAL NOTATION for the square root of \( a \).

The notation \( a^{\frac{1}{2}} \) is RATIONAL EXPONENT NOTATION for the square root of \( a \).

On your TI 83/84 calculator, you can use the \( \sqrt{ } \) symbol to compute square roots.

**EXAMPLES:**

a) \( \sqrt{25} = 5 \) because \( 5^2 = 25 \)

b) Note that the square and square root “undo” each other)

\[
(\sqrt{144})^2 = 144 \text{ and } \sqrt{144^2} = 144
\]

c) \( 25^{\frac{1}{2}} = \sqrt{25} = 5 \)

d) \( \sqrt{-64} = (-64)^{\frac{1}{2}} \) is not a real number because there is no number, squared, that will give -64

### THE NTH ROOT

\[ n^{\sqrt{a}} = a^{\frac{1}{n}}, \text{ the nth root of } a. \]

**EXAMPLES:**

a) \( \sqrt[4]{256} = 256^{\frac{1}{4}} = 4 \)  
   Calculator Entry: \( 256^{(1/4)} \)

b) \( \sqrt[7]{-2187} = (-2187)^{\frac{1}{7}} = -3 \)
   Calculator Entry: \( (-2187)^{(1/7)} \)

c) \( -\sqrt[3]{15} = -15^{\frac{1}{3}} \approx -2.47 \)
   Calculator Entry: \( -15^{(1/3)} \)

d) \( \sqrt[6]{-324} = (-324)^{\frac{1}{6}} \) is not a real number
   Calculator Entry: \( (-324)^{(1/6)} \)
RATIONAL EXPONENTS

\[ a^{p/q} = \sqrt[q]{a^p} = \left(\sqrt[q]{a}\right)^p \]

**EXAMPLES:**

a) \( \left(\sqrt[4]{81}\right)^3 = (81)^{3/4} = (3)^3 = 27 \)

b) \( \left(\sqrt[3]{-125}\right)^2 = (-125)^{2/3} = (-5)^2 = 25 \)

c) \( \frac{1}{\sqrt[5]{32}} = \frac{1}{32^{2/5}} = 32^{-2/5} = \frac{1}{2^2} = \frac{1}{4} \)

**Problem 1**

**MEDIA EXAMPLE – Compute with Rational/Radical Exponents**

Compute each of the following showing as much work as possible. Round to two decimal places as needed. Check results using your calculator.

a) \( \sqrt{49} = \)

b) \( \sqrt[3]{8} = \)

c) \( \sqrt{-49} = \)

d) \( \sqrt[3]{-8} = \)

e) \( -25^{3/2} \)

f) \( (-25)^{3/2} \)

g) \( \sqrt[7]{49} \)

h) \( 4\sqrt[12]{3} \)
<table>

Lesson 10 - Rational Exponents and Radical Functions

Section 10.2 – Square Root Functions – Key Characteristics

A basic square root function has the form

\[ f(x) = \sqrt{p(x)}, \]

where \( p(x) \) is a polynomial, and \( p(x) \geq 0 \).
(Remember that we cannot take the square root of negative numbers in the real number system.)

**DOMAIN**
To determine the domain of \( f(x) \), you want to find the values of \( x \) such that \( p(x) \geq 0 \).

**HORIZONTAL INTERCEPT**
To determine the horizontal intercept for the basic square root function \( f(x) = \sqrt{p(x)} \), solve the equation \( p(x) = 0 \).

**VERTICAL INTERCEPT**
To determine the vertical intercept, evaluate \( f(0) \).

---

**Problem 3  WORKED EXAMPLE – Key Characteristics of Square Root Functions**

Graph \( f(x) = \sqrt{x - 2} \) and determine vertical intercept, horizontal intercept, and domain of \( f(x) \).

To graph, input into Y1 the following: 2ndX^2 then x-2) so that Y1= \( \sqrt{(x - 2)} \). Graph on the standard window (Zoom 6) to get the graph below:

- **DOMAIN**
  Solve \( x - 2 \geq 0 \) to get \( x \geq 2 \).
  Therefore the domain is \( x \geq 2 \).

- **HORIZONTAL INTERCEPT**
  Solve \( x - 2 = 0 \) to get \( x = 2 \). The horizontal intercept is (2,0)

- **VERTICAL INTERCEPT**
  Determine \( f(0) = \sqrt{0-2} = \sqrt{-2} \) which is not a real number.
  So, there is no vertical intercept.

---

Page 354
**Problem 4**  | **MEDIA EXAMPLE – Key Characteristics of Square Root Functions**

For each of the following, determine the domain, horizontal intercept, and vertical intercept, then sketch an accurate graph of each.

a) \( f(x) = \sqrt{4-x} \)

b) \( g(x) = \sqrt{x-4} \)

**Domain of \( f(x) \):**

**Domain of \( g(x) \):**

**Horizontal Intercept:**

**Horizontal Intercept:**

**Vertical Intercept:**

**Vertical Intercept:**

---

**Problem 5**  | **YOU TRY – Key Characteristics of Square Root Functions**

Given the function \( f(x) = \sqrt{12-4x} \), determine the domain, the horizontal intercept, the vertical intercept (if it exists), and draw an accurate graph of the function. Round to one decimal place as needed.

**Domain of \( f(x) \):**

**Horizontal Intercept:**

**Vertical Intercept:**
A basic cube root function has the form

\[ f(x) = \sqrt[3]{p(x)}, \]

where \( p(x) \) is a polynomial.

**DOMAIN**
The domain of \( f(x) \) is all real numbers.

**HORIZONTAL INTERCEPT**
To determine the horizontal intercept for the basic cube root function \( f(x) = \sqrt[3]{p(x)}, \)
solve the equation \( p(x) = 0. \)

**VERTICAL INTERCEPT**
To determine the vertical intercept, evaluate \( f(0). \)

**Problem 6**  **WORKED EXAMPLE – Key Characteristics of Cube Root Functions**

Graph \( f(x) = \sqrt[3]{4x - 8} \) and determine vertical intercept, horizontal intercept, and domain of \( f(x). \)

To enter \( f(x) \) into your calculator, first rewrite the radical as a rational exponent:

\[ \sqrt[3]{4x - 8} = (4x - 8)^{\frac{1}{3}} \]

Graph on the standard window (Zoom 6) to get the graph below:

\[ f(0) = \sqrt[3]{4(0) - 8} = \sqrt[3]{-8} = -2 \]

So the vertical intercept is \((0, -2).\)
Problem 7  MEDIA EXAMPLE – Key Characteristics of Cube Root Functions

For each of the following, determine the domain, horizontal intercept, and vertical intercept, then sketch an accurate graph of each.

a) \( f(x) = \sqrt[3]{27 - 15x} \)  
   Domain of \( f(x) \):  
   Horizontal Intercept:  
   Vertical Intercept:

b) \( g(x) = \sqrt[3]{2x - 10} \)  
   Domain of \( g(x) \):  
   Horizontal Intercept:  
   Vertical Intercept:

Problem 8  YOU TRY – Key Characteristics of Cube Root Functions

Given the function \( f(x) = \sqrt[3]{x + 8} \), determine the domain, the horizontal intercept, the vertical intercept (if it exists), and draw an accurate graph of the function.

Domain of \( f(x) \):  
Horizontal Intercept:  
Vertical Intercept:
Section 10.4 – Radical Functions – Key Characteristics

A basic radical function has the form \( f(x) = \sqrt[n]{p(x)} \), where \( n > 0 \) and \( p(x) \) is a polynomial.

**DOMAIN:** The DOMAIN of \( f(x) = \sqrt[n]{p(x)} \) depends on the value of \( n \).
- If \( n \) is EVEN (like the square root function), then the domain consists of all values of \( x \) for which \( p(x) \geq 0 \). Remember that we cannot take an even root of negative numbers in the real number system.
- If \( n \) is ODD (like the cube root function), then the domain is all real numbers.

**HORIZONTAL INTERCEPT**
To determine the horizontal intercept for the basic cube root function \( f(x) = \sqrt[n]{p(x)} \), solve the equation \( p(x) = 0 \).

**VERTICAL INTERCEPT**
To determine the vertical intercept, evaluate \( f(0) \).

### Problem 9 – MEDIA EXAMPLE – Key Characteristics of Radical Functions

For each of the following, determine the domain, horizontal intercept, and vertical intercept, then sketch an accurate graph of each. Write your answers in exact form and give the decimal approximation rounded to the nearest hundredth.

a) \( f(x) = \sqrt[4]{x - 5} \)  

   **Domain:**
   
   **Horizontal Intercept:**
   
   **Vertical Intercept:**

b) \( g(x) = \sqrt[7]{11 + x} \)  

   **Domain:**
   
   **Horizontal Intercept:**
   
   **Vertical Intercept:**

Lesson 10 - Rational Exponents and Radical Functions

Section 10.5 – Solve Radical Equations by Graphing

Solve Radical Equations by Graphing

- Let \( Y_1 \) = one side of the equation
- Let \( Y_2 \) = other side of the equation
- Determine an appropriate window to see important parts of the graph
- Use the Intersection Method
- Note: If your graphs do not cross, then there is no intersection and no solution to the equation.

**Problem 11 WORKED EXAMPLE – Solve Radical Equations by Graphing**

Solve the equation \( \sqrt{10 - 3x} = 4 \) graphically.

Let \( Y_1 = \sqrt{10 - 3x} \)
Let \( Y_2 = 4 \)

Graph on the standard window (Zoom:6) then determine the intersection (seen below).

Your solution is the \( x \)-value of the intersection which in this case is \( x = -2 \).
Problem 12 | MEDIA EXAMPLE – Solve Radical Equations by Graphing

Solve the equations graphically. Include a rough but accurate sketch of the graphs and intersection point. Mark and label the intersection. Round answers to two decimal places.

a) \( \sqrt[3]{2x-1} = 5 \)

b) \( 41 + 5\sqrt{2x - 4} = 11 \)

Solution: ______________________  Solution: ______________________

Problem 13 | YOU TRY – Solve Radical Equations by Graphing

Solve the equation \( \sqrt[5]{8x + 133} = 4 \) graphically. Include a rough but accurate sketch of the graphs and intersection point. Mark and label the intersection. Round answers to two decimal places.

Solution: \( x = \) _______________
Lesson 10 - Rational Exponents and Radical Functions

Section 10.6 – Solve Radical Equations Algebraically

To solve radical equations algebraically (also called symbolically):

- Isolate the radical part of the equation on one side and anything else on the other
- Sometimes you will have radicals on both sides. That is ok.
- Raise both sides of the equation to a power that will “undo” the radical (2\text{nd} power to get rid of square root, 3\text{rd} power to get rid of cube root, etc…)
- Solve.
- Check your answer! Not all solutions obtained will check properly in your equation.

Problem 14  WORKED EXAMPLE – Solve Radical Equations Algebraically

Solve the equation $\sqrt{10 - 3x} = 4$ algebraically.

First, square both sides to remove the square root.

\[
\sqrt{10 - 3x} = 4 \\
(\sqrt{10 - 3x})^2 = 4^2 \\
10 - 3x = 16
\]

Next, isolate $x$.

\[
10 - 3x = 16 \\
-3x = 6 \\
x = -2
\]

VERY IMPORTANT! Check $x = -2$ in the original equation to be sure it works! Not all solutions obtained using the process above will check properly in your equation. If an $x$ does not check, then it is not a solution.

\[
\sqrt{10 - 3(-2)} = 4 \\
\sqrt{10 + 6} = 4 \\
\sqrt{16} = 4 \\
4 = 4
\]

$x = -2$ is the solution to this equation.
Lesson 10 - Rational Exponents and Radical Functions

Problem 15 | MEDIA EXAMPLE – Solve Radical Equations Algebraically
Solve the equations algebraically. Write your answers in exact form, then give the decimal approximation rounded to the nearest hundredth.

a) \(\sqrt[3]{2x - 1} = 5\)  
b) \(41 + 5\sqrt{2x - 4} = 11\)

Problem 16 | YOU TRY – Solve Radical Equations Algebraically
Solve the equations algebraically. Write your answers in exact form, then give the decimal approximation rounded to the nearest hundredth. Be sure to check your final result!

a) \(3\sqrt[4]{4 - x} - 7 = 20\)  
b) \(5 + \sqrt[4]{3x - 1} = 7\)

c) \(2\sqrt{5x} + 24 = 4\)  
d) \(\sqrt[3]{2} - 5x - 4 = 6\)
Problem 17 | WORKED EXAMPLE – Solve Radical Equations – More Advanced

Solve the equation algebraically and check graphically: $\sqrt{x+6} = x$. Be sure to check your final result!

Since the radical is isolated, square both sides to remove the square root. Then, isolate $x$.

$$\sqrt{x+6} = x$$

$$\left(\sqrt{x+6}\right)^2 = x^2$$

$$x + 6 = x^2$$

$$0 = x^2 - x - 6$$

$$x^2 - x - 6 = 0$$

What we now have is a quadratic equation. The easiest and fastest way to work with this problem is through factoring. You can also use the Quadratic Formula or graphing.

$$x^2 - x - 6 = 0$$

$$(x + 2)(x - 3) = 0$$

$x + 2 = 0$ or $x - 3 = 0$

$x = -2$ or $x = 3$

CHECK:

When $x = -2$

$$\sqrt{-2 + 6} = -2?$$

$$\sqrt{4} = -2?$$

$$2 \neq -2$$

$x = -2$ does not check so is not a solution

When $x = 3$

$$\sqrt{3 + 6} = 3?$$

$$\sqrt{9} = 3?$$

$3 = 3$

$x = 3$ checks so is a solution.

Graphical Check: $Y1 = \sqrt{x+6}$, $Y2 = x$ Window: Standard (Zoom:6)

Using the Intersection Method, we obtain a verified solution of $x = 3$. 
Problem 18 | MEDIA EXAMPLE – Solve Radical Equations – More Advanced

Solve the equation algebraically and graphically: \( 1 + \sqrt{7 - x} = x \).
Be sure to check your final result!

Problem 19 | YOU TRY – Solve Radical Equations – More Advanced

Solve the equation algebraically and graphically: \( \sqrt{x} + 6 = x + 4 \).
Be sure to check your final result!
Lesson 10 Practice Problems

Section 10.1: Roots, Radicals, and Rational Exponents

1. Complete the table below. Each expression should be written in radical notation, written with rational exponents and evaluated using the calculator. The first one is done for you.

<table>
<thead>
<tr>
<th></th>
<th>Written in radical notation</th>
<th>Written using rational exponents</th>
<th>Evaluated using the calculator (Rounded to two decimal places)</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>$\sqrt[3]{9}$</td>
<td>$9^{1/3}$</td>
<td>$9^{(1/3)} \approx 2.08$</td>
</tr>
<tr>
<td>b)</td>
<td>$\sqrt[5]{20}$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>c)</td>
<td>$\sqrt[3]{2^4}$</td>
<td></td>
<td></td>
</tr>
<tr>
<td>d)</td>
<td>$-\sqrt[4]{7^2}$</td>
<td></td>
<td></td>

12. Voltage through a circuit is determined by the formula $V = \sqrt{PR}$, where $P$ is power, measured in watts, and $R$ is the resistance, measured in ohms. Round answers to two decimal places as needed.

a) Determine the amount of resistance that is required for 2 watts of power to produce 4 volts.

b) Determine the voltage produced if 100 watts is supplied with a resistance of 40 ohms.

c) Determine the amount of power that must be supplied in order to produce 50 volts if the resistance is 30 ohms.
Lesson 10 Assessment

1. Evaluate the following using your graphing calculator. If there is no real solution, write “N”. Round answers to three decimal places if necessary.

\[ \sqrt[4]{42} = \underline{\hspace{2cm}} \quad \sqrt[3]{-512} = \underline{\hspace{2cm}} \quad \sqrt[4]{-625} = \underline{\hspace{2cm}} \]

2. Solve the following equations algebraically. Show all steps. Use your graphing calculator to check your answers.

a) \[ 6 + \sqrt[3]{7 - 3x} = 16 \]

b) \[ \sqrt[4]{2x + 8} + 5 = 0 \]

c) \[ 5 - \sqrt[3]{5x} = 11 \]

d) \[ \sqrt[5]{-x} = x + 1 \]
3. Complete the table. Write intercepts as ordered pairs. Use inequality notation for the domain. Round to the nearest hundredth as needed. Write “N” if the answer does not exist.

Lesson 11 –Rational Functions

In this lesson, you will embark on a study of rational functions. These may be unlike any function you have ever seen. Rational functions look different because they are in pieces but understand that the image presented is that of a single function.

In this lesson, you will graph rational functions and solve rational equations both graphically and algebraically. You will finish the lesson with an application of rational functions.

Mini-Lesson 11

Section 11.1 – Characteristics of Rational Functions

A RATIONAL FUNCTION is a function of the form

\[ f(x) = \frac{p(x)}{q(x)} \]

where \( p(x) \) and \( q(x) \) are polynomials and \( q(x) \) does not equal zero (remember that division by zero is undefined). Rational functions have similar shapes depending on the degree of the polynomials \( p(x) \) and \( q(x) \). However, the shapes are different enough that only the general characteristics are listed here and not a general graph:

**DOMAIN**
- The solution(s) found when solving \( q(x) = 0 \) are the values that are NOT part of the domain of \( f(x) \).

**VERTICAL ASYMPTOTES**
- \( f(x) \) will have VERTICAL ASYMPTOTES at all input values where \( q(x) = 0 \). These asymptotes are vertical guiding lines for the graph of \( f(x) \).
- The graph of \( f(x) \) will never cross over these lines.
- To find the Vertical Asymptotes for \( f(x) \), set the denominator, \( q(x) \), equal to 0 and solve for \( x \). For each solution, \( x = \) that value is the equation of your vertical asymptote.

**HORIZONTAL ASYMPTOTES**
This asymptote is a guiding line for the function as the input values approach positive and negative infinity. If \( f(x) \) has a HORIZONTAL ASYMPTOTE \( y = a \), then as the input values approach positive and negative infinity, the output values will approach \( a \).

Two methods for finding the Horizontal Asymptote of a Rational Function:
1. Enter \( f(x) \) into your graphing calculator, then go to your TABLE, and enter in “large” values for the input. Start with 10, then 100, 1000, and so on. If a horizontal asymptote exists, you will notice the output values “approaching” a number, \( a \). The line \( y = a \) is the horizontal asymptote.
2. Make a fraction with only the highest degree term in \( p(x) \) as the numerator and the highest degree term in \( q(x) \) as the denominator. Reduce this fraction completely.
   - If the fraction reduces to a number, then \( y = \) that number is the equation of the horizontal asymptote.
   - If the fraction reduces to \( \frac{\text{number}}{x} \), then \( y = 0 \) is your horizontal asymptote
   - \( f(x) \) will have a horizontal asymptote only if the degree of \( q(x) \geq \) degree of \( p(x) \).
Problem 1 | WORKED EXAMPLE – Key Characteristics of Rational Functions

Graph \( f(x) = \frac{2}{x+3} \) and determine the horizontal and vertical asymptotes and the domain.

To graph, let \( Y1 = \frac{2}{x+3} \). Input \( Y1=2/(x+3) \) into your \( Y= \) list and note the use of ( ).

To find any VERTICAL ASYMPTOTES, set the denominator equal to 0 and solve for \( x \).
\[ x + 3 = 0, \text{ therefore } x = -3. \]
The equation of the vertical asymptote is \( x = -3 \).

To find the DOMAIN, set the denominator equal to 0 and solve for \( x \). Because \( x = -3 \) makes the denominator of \( f(x) \) equal zero, this value is not part of the domain. All other inputs are allowable. So, the domain for \( f(x) \) is \( x \neq -3 \), “all real numbers except \(-3\)”.

To find the HORIZONTAL ASYMPTOTE, make a fraction of the highest power term in the numerator (2) and the highest power term in the denominator (x). Reduce. Here is what the fraction looks like.

\[ \frac{2}{x} \]

What you are trying to find out is, what is the value of this function as \( x \) gets really big (positive) and really big (negative)? To answer this question, we need to apply a little abstract thinking.

ABSTRACT THINKING

- In your mind, think of the very biggest positive number you can think of. What happens when you divide 2 by that number? Well, the result is going to be very, very small…effectively zero if your number is big enough. So, \( y = 0 \) is your horizontal asymptote equation as the same thing works for the biggest negative number you can think of.

Putting all these things together gives the following graph with asymptotes labeled:

\( x=-3 \) is the vertical asymptote equation

\( y = 0 \) is the horizontal asymptote equation
Problem 2 | MEDIA EXAMPLE – Key Characteristics of Rational Functions

a) Graph \( f(x) = \frac{4x}{x - 7} \) and determine the horizontal and vertical asymptotes and the domain.

b) Graph \( f(x) = \frac{-3x}{7x + 9} \) and determine the horizontal and vertical asymptotes and the domain.

c) Quick Example: Find the Horizontal Asymptote for \( f(x) = \frac{x - 1}{x + 5} \).

The ratio of highest degree terms in the numerator/denominator is \( y = \frac{x}{x} = 1 \)
so the Horizontal Asymptote for this function is \( y = 1 \).
Problem 3 | YOU TRY – Key Characteristics of Rational Functions

a) Graph \( f(x) = \frac{4}{x-5} \) and determine the horizontal and vertical asymptotes and the domain.

<table>
<thead>
<tr>
<th>Domain:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vertical Asymptote:</td>
</tr>
<tr>
<td>Horizontal Asymptote:</td>
</tr>
</tbody>
</table>

b) Graph \( g(x) = \frac{3x}{2x+1} \) and determine the horizontal and vertical asymptotes and the domain.

<table>
<thead>
<tr>
<th>Domain:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vertical Asymptote:</td>
</tr>
<tr>
<td>Horizontal Asymptote:</td>
</tr>
</tbody>
</table>

c) Graph \( h(x) = \frac{2x+1}{4-x} \) and determine the horizontal and vertical asymptotes and the domain.

<table>
<thead>
<tr>
<th>Domain:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vertical Asymptote:</td>
</tr>
<tr>
<td>Horizontal Asymptote:</td>
</tr>
</tbody>
</table>
To solve Rational Equations by GRAPHING:
- Let $Y_1 = $ one side of the equation
- Let $Y_2 = $ other side of the equation
- Determine an appropriate window to see important parts of the graph
- Use the intersection method
- You may have more than one solution
- The $x$-value(s) of the intersection are your solutions

### Problem 4  WORKED EXAMPLE – Solve Rational Equations by Graphing

**Solve** $5x = 4 + \frac{3}{x - 4}$

Let $Y_1 = 5x$
Let $Y_2 = 4 + \frac{3}{(x - 4)}$  Note use of ( )
Graph on window $x: [-10..10], y:[-10..30]$
If you use standard window you do not see the upper intersection.

![Graph](image)

You will need to perform the intersection process two separate times on your calculator. One time, you should get $x = 0.62$ (the left intersection) and the second time you should get $x = 4.18$. Be sure to move your cursor far enough (it has to go all the way across the vertical asymptote) to read the second intersection. Solutions, then, are $x = 0.62, 4.18$

### Problem 5  MEDIA EXAMPLE – Solve Rational Equations by Graphing

**Solve** $3 = 1 + \frac{3x}{x - 1}$ by graphing. Round answer(s) to two decimals as needed.
To solve rational equations ALGEBRAICALLY (also called symbolically):

- Identify the common denominator for all fractions in the equation.
- Take note of the values of \( x \) that make the common denominator zero. These \( x \)-values cannot be used as solutions to the equation since we cannot divide by 0.
- Clear the fractions by multiplying both sides of the equation by the common denominator
- Solve for \( x \).
- Check your work by plugging the value(s) back into the equation or by graphing.

### Problem 6 WORKED EXAMPLE – Solve Rational Equations Algebraically

Solve \( 5x = 4 + \frac{3}{x - 4} \) algebraically. Round solutions to two decimal places.

- Common denominator for all sides is \( x - 4 \). Multiply both sides of the equation by \( (x - 4) \) and solve for \( x \) to get the following:
  
  \[
  (5x)(x - 4) = (4 + \frac{3}{x - 4})(x - 4)
  \]
  
  \[
  5x^2 - 20x = 4(x - 4) + \frac{3}{x - 4} (x - 4)
  \]
  
  \[
  5x^2 - 20x = 4x - 16 + 3
  \]
  
  \[
  5x^2 - 20x = 4x - 13
  \]
  
  \[
  5x^2 - 20x + 4x - 13 = 0
  \]
  
  \[
  5x^2 - 24x + 13 = 0
  \]

Notice that we now have a quadratic equation, which can be solved using the methods of last chapter. Because we are asked to solve our original problem algebraically, let’s continue that process and not resort to a graphical solution. We will use the Quadratic Formula with \( a = 5 \), \( b = -24 \), and \( c = 13 \) to get:

\[
 x = \frac{-(-24) \pm \sqrt{(-24)^2 - 4(5)(13)}}{2(5)} = \frac{24 \pm \sqrt{576 - 260}}{10} = \frac{24 \pm \sqrt{316}}{10}
\]

Because we want rounded solutions, I do NOT need to continue reducing my fraction solutions above but can compute the following directly:

\[
 x = \frac{24 + \sqrt{316}}{10} \approx 4.18, \quad x = \frac{24 - \sqrt{316}}{10} = .62
\]

These solutions match what we found in the graphing example previously.

To check, plug the values back into the original equation (one at a time) or use the graphing method.
Problem 7  | MEDIA EXAMPLE – Solving Rational Equations Algebraically

Solve $3 = 1 + \frac{3x}{x-1}$ algebraically. Round answer(s) to two decimals as needed.

Problem 8  | YOU TRY – Solving Rational Equations Graphically/Algebraically

Round answer(s) to two decimals as needed.

a) Solve $1 = \frac{5}{x-2} - 3$ graphically. Sketch the graph from your calculator screen, and indicate the viewing window you used.

Xmin=_____  Solution: _________________

Xmax=_____

Ymin=_____

Ymax=_____

b) Solve $1 = \frac{5}{x-2} - 3$ algebraically. Show complete work.
Consider the function \( f(x) = \frac{x - 1}{x + 5} \)

a) What is the domain?

b) Give the equation of the vertical asymptote for \( f(x) \).

c) Give the equation of the horizontal asymptote for \( f(x) \).

d) What is the vertical intercept? Show your work.

e) What is the horizontal intercept? Show your work.

f) Determine \( f(12) \). Show your work.

\[ f(12) = \frac{12 - 1}{12 + 5} = \frac{11}{17} \]

g) For what value of \( x \) is \( f(x) = 3 \)? Show your work.

\[ 3 = \frac{x - 1}{x + 5} \]

\[ 3x + 15 = x - 1 \]

\[ 2x = -16 \]

\[ x = -8 \]

Section 11.3 – Applications of Rational Functions

You and your family are heading out to San Diego on a road trip. From Phoenix, the trip is 354.5 miles according to Google. Answer the following questions based upon this situation.

a) Use the relationship, Distance = Rate times Time or \( d = rT \), to write a rational function \( T(r) \) that has the rate of travel, \( r \) (in mph), as its input and the time of travel (in hours) as its output. The distance will be constant at 354.5 miles.

b) Provide a rough but accurate sketch of the graph in the space below. Label your horizontal and vertical axes. You only need to graph the first quadrant information. Indicate the graphing window you chose.

\[
\begin{align*}
\text{Xmin} &= \\
\text{Xmax} &= \\
\text{Ymin} &= \\
\text{Ymax} &= \\
\end{align*}
\]

c) If you average 60 mph, how long will the trip take?

d) If the trip took 10 hours, what was your average rate of travel?

e) What does the graph indicate will happen as your rate increases?

f) What does the graph indicate will happen as your rate gets close to zero?
Problem 12  YOU TRY – Applications of Rational Functions

You and your friends are heading out to Las Vegas on a road trip. From Scottsdale, the trip is 308.6 miles according to Google. Answer the following questions based upon this situation.

a) Use the relationship, Distance = Rate times Time or \( d = rT \), to write a rational function \( T(r) \) that has the average rate of travel, \( r \) (in mph), as its input and the time of travel (in hours) as its output.

b) Provide a rough but accurate sketch of the graph in the space below. Label your horizontal and vertical axes. You only need to graph the first quadrant information. Indicate the graphing window you chose.

\[
\begin{array}{c}
\text{Xmin} = \underline{\quad} \\
\text{Xmax} = \underline{\quad} \\
\text{Ymin} = \underline{\quad} \\
\text{Ymax} = \underline{\quad} \\
\end{array}
\]

c) According to Google, the trip should take 5 hours. Determine your average rate of travel if the trip takes 5 hours.

d) Determine the vertical asymptote for \( T(r) \), and write a sentence explaining its significance in this situation.

e) Determine the horizontal asymptote for \( T(r) \), and write a sentence explaining its significance in this situation.

Section 11.2: Solving Rational Equations

2. Solve each of the following equations by graphing. Round answer(s) to two decimals as needed.

a) \[ 4 = \frac{3x}{x-1} \]

Solution:_________________

b) \[ 3 = 2 + \frac{5}{x-2} \]

Solution:_________________

c) \[ x + 2 = \frac{2}{x^2-4} \]

Solution:_________________

d) \[ 3 = x + \frac{1}{x} \]

Solution:_________________

e) \[ \frac{5}{x+4} = \frac{12}{13} \]

Solution:_________________

f) \[ \frac{2}{x} = 1 \]

Solution:_________________
3. Solve each of the following rational equations algebraically (also called symbolically). Check your work by plugging the value(s) back into the equation or by graphing.

a) \[ 4 = \frac{3}{x-6} \]

b) \[ \frac{4}{x+4} = \frac{6}{x-2} \]

c) \[ \frac{4-2x}{3} = \frac{3x+2}{4} \]

d) \[ 6 = 2 + \frac{3}{x-5} \]

e) \[ x + 4 = \frac{-4}{x} \]

f) \[ \frac{-1}{x-3} = \frac{x+3}{5} \]
4. Graph the rational functions. Make sure to include the domain and any horizontal asymptotes, vertical asymptotes, horizontal intercepts and vertical intercepts (if they exist).

a) $f(x) = \frac{3}{x-2}$

5. Determine the following.

a) Let \( f(x) = \frac{3}{x-2} \).

\[
\text{Find } f(-1) \quad \text{Find } x \text{ so that } f(x) = 6
\]

b) Let \( h(x) = \frac{3x+4}{x+3} \).

\[
\text{Find } h(-2) \quad \text{Find } x \text{ so that } h(x) = \frac{16}{7}
\]

c) Let \( f(x) = \frac{x+7}{4-2x} \).

\[
\text{Find } f(1) \quad \text{Find } x \text{ so that } f(x) = -3
\]

d) Let \( g(x) = \frac{2x-1}{x(x-2)} \).

\[
\text{Find } g(3) \quad \text{Find } x \text{ so that } g(x) = \frac{7}{8}
\]
Section 11.3: Applications of Rational Functions

6. Mr. Sculley decides to make and sell Left Handed Smoke Shifters as a side business. The fixed cost to run his business is $250 per month and the cost to produce each Smoke Shifter averages $8. The Smoke Shifters will sell for $19.95. The function below gives the average cost (in dollars) per hat when \( x \) hats are produced.

\[
A(x) = \frac{8x + 250}{x}
\]

a) Determine \( A(1) \), and write a sentence explaining the meaning of your answer.

b) Complete the table below.

<table>
<thead>
<tr>
<th>( x )</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>( A(x) )</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

c) Determine \( A(10) \), and write a sentence explaining the meaning of your answer.

d) How many Smoke Shifters must be produced in order to reduce the average cost to $15 each?

e) Give the equation of the horizontal asymptote of \( A(x) \), and write a sentence explaining its significance in this situation.
7. You and your friends are heading out to San Deigo on a road trip. From Scottsdale, the trip is 373 miles. Answer the following questions based upon this situation.

a) Use the relationship, Distance = Rate times Time or \( d = rT \), to write a rational function \( T(r) \) that has the rate of travel, \( r \) (in mph), as its input and the time of travel (in hours) as its output.

b) Provide a rough but accurate sketch of the graph in the space below. Label your horizontal and vertical axes. You only need to graph the first quadrant information. Indicate the graphing window you chose.

| Xmin=______ |
| Xmax=______ |
| Ymin=______ |
| Ymax=______ |

c) According to Google, the trip should take 5 hours and 45 minutes (5.75 hours). Determine your average rate of travel if the trip takes only 5 hours.

d) Determine the horizontal asymptote for \( T(r) \), and write a sentence explaining its significance in this situation.
8. Harkins Theaters offers $1.50 soft drink refills every time you bring your 2013 Harkins Loyalty Cup to the theater. You can purchase the Loyalty Cup (filled) for $6.50.

The function \( C(x) = \frac{1.5x + 6.5}{x} \) gives the average cost (in dollars) per refill with the Loyalty Cup, where \( x \) is the number of soft drink refills purchased.

a) Determine \( C(1) \), and write a sentence explaining the meaning of your answer.

b) Complete the table below.

<table>
<thead>
<tr>
<th>( x )</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>( C(x) )</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

c) How many refills must you purchase in order to reduce the average cost to $2 per refill?

d) Give the equation of the horizontal asymptote of \( C(x) \), and write a sentence explaining its significance in this situation.
Lesson 11 Assessment

1. Consider the function \( g(x) = \frac{2x - 4}{x + 5} \)
   
a) What is the domain? ______________________________
   
b) Give the equation of the vertical asymptote for \( g(x) \). _______________________
   
c) Give the equation of the horizontal asymptote for \( g(x) \). _______________________
   
d) What is the vertical intercept? _________________
   
   What is the horizontal intercept? _________________
   
e) For what value of \( x \) is \( g(x) = 3 \)? Show your work.

f) Determine \( g(42) \). Show your work. Round your answer to three decimal places.
You and your family are driving to Santa Fe, NM on a road trip. From Phoenix, the trip is 526 miles according to Google. Answer the following questions based upon this situation. Round to the nearest tenth as needed.

a) Use the relationship, Distance = Rate times Time or \( d = rT \), to write a rational function \( T(r) \) that has the average rate of travel, \( r \) (in mph), as its input and the time of travel (in hours) as its output. The distance will be constant at 526 miles.

b) If you average 55 mph, how long will the trip take?

c) If the trip took 12 hours, what was your average rate of travel?

d) Determine the vertical intercept of \( T(r) \) and interpret its meaning. If the vertical intercept does not exist, explain why (in the context of the story).

e) Determine the horizontal intercept of \( T(r) \) and interpret its meaning. If the horizontal intercept does not exist, explain why (in the context of the story).

f) Give the equation of the vertical asymptote of \( T(r) \), and write a sentence explaining its significance in this situation.

g) Give the equation of the horizontal asymptote of \( T(r) \), and write a sentence explaining its significance in this situation.
Lesson 12 – Course Review

In this lesson, we will review the topics and applications from Lessons 1-11. We will begin with a review of the different types of functions, and then apply each of them to a set of application problems.

Lesson Topics:

Section 12.1 Overview of Functions
- Linear, Exponential, Logarithmic, Quadratic, Rational, and Radical Functions
- Identify basic characteristics and graph

Section 12.2 Solving Equations
- Graphically
- Algebraically

Section 12.3 Mixed Applications

Section 12.2 – Solving Equations

Problem 7 | YOU TRY – Solving Equations by Graphing

In each situation below, you will need to graph to find the solution to the equation using the INTERSECTION method described in this lesson. Fill in the missing information for each situation. Include a rough but accurate sketch of the graphs and intersection point. Mark and label the intersection. Round answers to two decimal places.

a) Solve $3x^2 - 6x + 1 = 5$
   Solutions: $x =$ ____________, $x =$ ____________
   
   $\begin{array}{c}
   Xmin: \\
   Xmax: \\
   Ymin: \\
   Ymax: \\
   \end{array}$

b) Solve $85(1.08)^x = 289$
   Solution: $x =$ ______________
   
   $\begin{array}{c}
   Xmin: \\
   Xmax: \\
   Ymin: \\
   Ymax: \\
   \end{array}$

c) Solve $2 + \sqrt{x + 5} = 9$
   Solution: $x =$ ______________
   
   $\begin{array}{c}
   Xmin: \\
   Xmax: \\
   Ymin: \\
   Ymax: \\
   \end{array}$
### Problem 8  
**YOU TRY – Solving Equations Algebraically**

Solve the equations below *algebraically* showing all steps. Where applicable, give *both* the exact answer and the decimal approximation rounded to the nearest hundredth.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>

</tbody>
</table>
Section 12.3 – Mixed Applications

### Problem 9  |  YOU TRY – Mixed Applications

A toy rocket is shot straight up into the air. The function \( H(t) = -16t^2 + 128t + 3 \) gives the height (in feet) of a rocket after \( t \) seconds. Round answers to two decimal places as needed. All answers must include appropriate units of measure.

a) How long does it take for the rocket to reach its maximum height? Write your answer in a complete sentence.

b) What is the maximum height of the rocket? Write your answer in a complete sentence.

c) How long does it take for the rocket to hit the ground? Write your answer in a complete sentence.

d) Identify the vertical intercept. Write it as an ordered pair and interpret its meaning in a complete sentence.

e) Determine the practical domain of \( H(t) \). Use inequality notation and include units.

f) Determine the practical range of \( H(t) \). Use inequality notation and include units.
Problem 10  YOU TRY – Mixed Applications

The function \( E(t) = 3861 - 77.2t \) gives the surface elevation (in feet above sea level) of Lake Powell \( t \) years after 1999. All answers must indicate the appropriate year.

a) Determine the surface elevation of Lake Powell in the year 2001. Show your work, and write your answer in a complete sentence. Round your answer to the nearest whole number.

b) Determine \( E(5) \), and write a sentence explaining the meaning of your answer. Round your answer to the nearest whole number.

c) Identify the vertical intercept of this linear function. Write it as an ordered pair, then write a sentence explaining its meaning in this situation.

d) Identify the slope of this linear function and explain its meaning in this situation. Answer in a complete sentence and include all appropriate units.

e) This function accurately models the surface elevation of Lake Powell from 1999 to 2005. Determine the practical range of this linear function. Use proper inequality notation and include units. Round to the nearest whole number.
Problem 11 | YOU TRY – Mixed Applications

One 12-oz can of Diet Pepsi contains about 36 mg of caffeine. The body metabolizes caffeine at a rate of about 14% per hour. Answer in complete sentences.

a) Write a formula for the amount, \( A \), of caffeine remaining in the body \( x \) hours after drinking one can of Diet Pepsi. Your answer must be written in function notation.

b) Determine \( A(3) \). Round your answer to two decimal places, and write a sentence explaining its meaning.

c) For what value of \( x \) is \( A(x) = 3 \)? Round your answer to two decimal places, and write a sentence explaining its meaning.

d) How much caffeine is in the body one day after drinking one can of Diet Pepsi? Show all of your work and write your answer in a complete sentence. Round your answer to two decimal places as needed.

e) How long will it take the body to metabolize half of the caffeine from one can Diet Pepsi? Show all of your work and write your answer in a complete sentence. Round your answer to two decimal places as needed.

f) According to this model, how long will it take for all of the caffeine to leave the body?
Problem 12 | YOU TRY – Mixed Applications

You and your family are heading out to San Diego on a road trip. From Phoenix, the trip is 355 miles according to Google. Answer the following questions based upon this situation. Round to the nearest tenth as needed.

a) Use the relationship, Distance = Rate times Time or $d = rT$, to write a rational function $T(r)$ that has the average rate of travel, $r$ (in mph), as its input and the time of travel (in hours) as its output. The distance will be constant at 355 miles.

b) If you average 55 mph, how long will the trip take?

c) If the trip took 10 hours, what was your average rate of travel?

d) Determine the vertical intercept of $T(r)$ and interpret its meaning. If the vertical intercept does not exist, explain why (in the context of the story).

e) Determine the horizontal intercept of $T(r)$ and interpret its meaning. If the horizontal intercept does not exist, explain why (in the context of the story).

f) Give the equation of the vertical asymptote of $T(r)$, and write a sentence explaining its significance in this situation.

f) Give the equation of the horizontal asymptote of $T(r)$, and write a sentence explaining its significance in this situation.
The table below shows the value, V, of an investment (in thousands of dollars) after n years.

<table>
<thead>
<tr>
<th>n</th>
<th>0</th>
<th>3</th>
<th>5</th>
<th>10</th>
<th>15</th>
<th>22</th>
</tr>
</thead>
<tbody>
<tr>
<td>V(n)</td>
<td>4.63</td>
<td>5.92</td>
<td>6.88</td>
<td>10.23</td>
<td>15.21</td>
<td>26.39</td>
</tr>
</tbody>
</table>

a) Use your calculator to determine the exponential regression equation that models the set of data above. Round the “a” value to two decimals, and round the “b” value to three decimals. Use the indicated variables and proper function notation.

b) Based on the equation found in part a, at what percent rate is the value of this investment increasing each year?

c) Determine V(12), and write your answer in a complete sentence. Round your answer to two decimal places.

d) How long will it take for the value of this investment to reach $100,000? Round your answer to two decimal places. Write your answer in a complete sentence.

e) How long will it take for the value of the investment to double? Round your answer to two decimal places. Write your answer in a complete sentence.
Problem 14  YOU TRY – Mixed Applications

In 2010, the estimated population of Maricopa County was 3,817,117. By 2011, the population had grown to 3,880,244.

a) Assuming that the growth is linear, construct a linear equation that expresses the population, \( P \), of Maricopa County \( x \) years since 2010.

b) Assuming that the growth is exponential, construct an exponential equation that expresses the population, \( P \), of Maricopa County \( x \) years since 2010.

c) Use the equation found in part a to predict the population of Maricopa County in 2015.

d) Use the equation found in part b to predict the population of Maricopa County in 2015.
Problem 15  YOU TRY – Mixed Applications

A resort hotel in Scottsdale, AZ charges $1800 to rent a reception hall, plus $58 per person for dinner and open bar. The reception hall can accommodate up to 200 people.

a) Write a function, \( T \), to represent the total cost to rent the reception hall if \( n \) people attend the reception.

\[
T(n) = \text{__________________________}
\]

b) During the summer months, the hotel offers a discount of 15% off the total bill, \( T \). Write a function, \( D \), to represent the discounted cost if the total bill was \( T \).

\[
D(T) = \text{__________________________}
\]

c) Using the information above, write a formula for \( D(T(n)) \) and complete the table below.

\[
D(T(n)) = \text{__________________________}
\]

<table>
<thead>
<tr>
<th>( n )</th>
<th>0</th>
<th>50</th>
<th>100</th>
<th>150</th>
<th>200</th>
</tr>
</thead>
<tbody>
<tr>
<td>D(T(n))</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

d) What information does the function \( D(T(n)) \) provide in this situation? Be sure to identify the input and output quantities.

e) Interpret the meaning of the statement \( D(T(100)) = 6460 \). Include all appropriate units.

f) Determine the maximum number of people that can attend the reception for $5,000 (after the discount is applied)?
Lesson 12 Practice Problems

Functions

1. In the space below, draw a graph that represents a function, and a graph that does NOT represent a function.

   ![Graphs](image)

2. Are these functions? Circle yes or no.

<table>
<thead>

   Yes No Yes No Yes No

3. Are these functions? Circle yes or no.

   a) \{(2, -4), (6, -4), (0, 0), (5, 0)\}  Yes No
   b) \{(1, 1), (2, 2), (3, 3), (4, 4)\}  Yes No
   c) \{(1, -8), (5, 2), (1, 6), (7, -3)\}  Yes No

4. Are these functions? Circle yes or no.

   ![Graphs](image)
5. Answer true or false:

a) The sales tax is a function of the price of an item.

b) The numerical grade in this course is a function of the letter grade.

c) Cooking time for a turkey is a function of the weight of the bird.

d) The letter grade on a true/false quiz is a function of the number of questions answered correctly.

6. The function $r(x)$ is defined by the following table of values.

<table>
<thead>
<tr>
<th>$x$</th>
<th>3</th>
<th>5</th>
<th>6</th>
<th>9</th>
<th>13</th>
</tr>
</thead>
<tbody>
<tr>
<td>$r(x)$</td>
<td>-9</td>
<td>3</td>
<td>2</td>
<td>2</td>
<td>1</td>
</tr>
</tbody>
</table>

a) $r(9) =$

b) $r(3) =$

c) $r(\_\_\_\_\_\_\_\_) = 1$

d) $r(\_\_\_\_\_\_\_\_) = 3$

e) The domain of $r(x)$ is $\{ \}$

f) The range of $r(x)$ is $\{ \}$

7. Consider the function $g = \{(2, 5), (0, 6), (5, 8), (-3, 7)\}$

a) $g(0) =$

b) $g(5) =$

c) $g(\_\_\_\_\_\_\_\_) = 7$

d) $g(\_\_\_\_\_\_\_\_) = 5$

e) The domain of $g$ is $\{ \}$

f) The range of $g$ is $\{ \}$
8. Given $f(4) = 8$, $f(3) = 11$, $f(0) = 6$

   a) The domain of $f$ is \{ _________________ \}

   b) The range of $f$ is \{ _________________ \}

   c) Write the function $f$ as a set of ordered pairs.

9. The graph of $f(x)$ is given below.

   a) Domain: _______________________

   b) Range _______________________

   c) $f(-3) = _______

   d) $f(0) = _______

   e) $f(x) = 4$ when $x = _______

   f) $f(x) = 0$ when $x = _______

10. The graph of $f(x)$ is given below.

    a) Domain: _______________________

    b) Range _______________________

    c) $f(3) = _______

    d) $f(0) = _______

    e) $f(x) = -2$ when $x = _______

    f) $f(x) = 0$ when $x = _______
11. The graph of \( f(x) \) is given below.

\[ \begin{align*}
\text{a) Domain: } & \quad \underline{\text{______________}} \\
\text{b) Range } & \quad \underline{\text{______________}} \\
\text{c) } f(-1) = & \quad \underline{\text{_______}} \\
\text{d) } f(0) = & \quad \underline{\text{_______}} \\
\text{e) } f(x) = -5 & \quad \text{when } x = \underline{\text{__________}}
\end{align*} \]

12. Let \( W(p) = p^2 - 9p + 20 \). Show all steps. Write each answer in function notation and as an ordered pair.

\[ \begin{align*}
\text{a) } & \quad \text{Determine } W(-10) \\
\text{b) } & \quad \text{For what value(s) of } p \text{ is } W(p) = 0?
\end{align*} \]

13. Let \( h(x) = 4 \). Show all steps. Write each answer in function notation and as an ordered pair.

\[ \begin{align*}
\text{a) } & \quad \text{Determine } h(5) \\
\text{b) } & \quad \text{Determine } h(81).
\end{align*} \]
14. Let \( p(x) = \frac{40}{2x} \). Show all steps. Write each answer in function notation and as an ordered pair.

a) Determine \( p(5) \).

b) For what value of \( x \) is \( p(x) = \frac{1}{4} \) ?

c) Determine the domain of \( p(x) \).

15. The functions \( A \) and \( B \) are defined by the following tables

<table>
<thead>
<tr>
<th>( x )</th>
<th>-3</th>
<th>-2</th>
<th>0</th>
<th>1</th>
<th>4</th>
<th>5</th>
<th>8</th>
<th>10</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>( A(x) )</td>
<td>8</td>
<td>6</td>
<td>3</td>
<td>2</td>
<td>5</td>
<td>8</td>
<td>11</td>
<td>15</td>
<td>20</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>( x )</th>
<th>0</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>8</th>
<th>9</th>
<th>11</th>
<th>15</th>
</tr>
</thead>
<tbody>
<tr>
<td>( B(x) )</td>
<td>1</td>
<td>3</td>
<td>5</td>
<td>10</td>
<td>4</td>
<td>2</td>
<td>0</td>
<td>-2</td>
<td>-5</td>
</tr>
</tbody>
</table>

Determine the values for each of the following.

a) \( B(3) = \)__________

b) \( A(8) = \)__________

c) \( A(0) + B(0) = \)__________

d) \( A(8) - B(8) = \)__________

e) \( A(4) \cdot B(4) = \)__________

f) \( \frac{A(5)}{B(5)} = \)__________

g) \( A(B(0)) = \)__________

h) \( B(A(10)) = \)__________

i) \( B(B(3)) = \)__________
16. Let \( p(x) = x^2 + 2x + 3 \) and \( r(x) = x - 5 \). Determine each of the following. Show all work. Box your answers.
   a) \( p(x) - r(x) = \)
   b) \( p(0) \cdot r(0) = \)

   c) \( p(-2) + r(-2) = \)
   d) \( r(7) - p(7) = \)

   e) \( p(r(x)) = \)
   f) \( r(p(7)) = \)
17. Darby signs a 48-month lease agreement for a new Chevrolet Camaro 2LT convertible. The function \( T(n) = 3491.88 + 580.85n \) gives the total amount paid \( n \) months after signing.

a) Using complete sentences, interpret \( T(12) = 10462.08 \) in the context of the story.

b) Determine \( T(24) \) and write a sentence explaining the meaning of your answer in this situation.

c) Determine the value of \( n \) if \( T(n) = 30,000 \). Write a sentence explaining the meaning of your answer in this situation.

d) Identify the slope of \( T(n) \) and interpret its meaning in a complete sentence.

e) Identify the vertical intercept of \( T(n) \). Write it as an ordered pair and interpret its meaning in a complete sentence.

f) Determine the practical domain of \( T(n) \). Use inequality notation. Include units.

g) Determine the practical range of \( T(n) \). Use inequality notation. Include units.
18. A candy company has a machine that produces candy canes. The table below is a partial list of the relationship between the number of minutes the machine is operating and the number of candy canes produced by the machine during that time period.

<table>
<thead>
<tr>
<th>Minutes $t$</th>
<th>3</th>
<th>5</th>
<th>8</th>
<th>12</th>
<th>15</th>
</tr>
</thead>
<tbody>
<tr>
<td>Candy Canes $C(t)$</td>
<td>12</td>
<td>20</td>
<td>32</td>
<td>48</td>
<td>60</td>
</tr>
</tbody>
</table>

a) Include units.  $C(12) =$ ________________________________

b) In a complete sentence and including all appropriate units, explain the meaning of your answer in part a).

c) Determine the average rate of change of $C(t)$ from 5 minutes to 8 minutes. Interpret your answer in a complete sentence.

d) Is $C(t)$ a linear function? If yes, identify the slope and write the equation in $C(t) = mt + b$ form.

e) How many candy canes will this machine produce in one hour?
Lesson 12 – Course Review

Practice Problems

19. The following table shows the distance of rocket from Earth in 100,000’s of miles as it travels towards Mars.

<table>
<thead>
<tr>
<th>Number of Days</th>
<th>1</th>
<th>3</th>
<th>7</th>
<th>12</th>
<th>18</th>
<th>27</th>
<th>37</th>
<th>44</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distance from Earth (100,000’s of miles)</td>
<td>5.1</td>
<td>15.9</td>
<td>35.2</td>
<td>61.1</td>
<td>89.7</td>
<td>137.2</td>
<td>183.5</td>
<td>223.0</td>
</tr>
</tbody>
</table>

a) Let \( t \) = the number of days since the rocket was launched and \( D(t) \) = the distance from Earth. Use your calculator to determine the linear regression equation for the data (round all values to two decimal points).

b) Use your regression equation to estimate the rocket’s distance from Earth 23 days after launch.

c) Use your regression equation to estimate when the rocket will reach Mars if Mars’ distance from Earth is approximately 127 million miles.

d) Determine \( D(20) \) and write a sentence explaining the meaning of your answer.

e) Use your regression equation to estimate the velocity of the rocket. Make sure to include units in your answer.
20. Bill’s car breaks down and he calls a tow company. The company’s charges can be found by using the linear function, \( T(x) = 5.50x + 24.50 \) where \( T(x) \) is the cost in dollars and \( x \) is the number of miles the car is towed.

a) Identify vertical intercept of this function. Write it as an ordered pair and explain its meaning in the context of this problem.

b) Identify the slope of this function. Explain its meaning in the context of this problem.

21. Find the equation of the line passing through \((-3,2)\) and \((5,7)\). Leave your answer in \( y = mx + b \) form.

22. Find the equation of the horizontal line passing through \((-3, 2)\).

23. Find the equation of the vertical line passing through \((-3, 2)\).
24. The function \( d(t) = -63.24t + 874.9 \) can be used to determine Donna’s distance from Phoenix as she is traveling home from her summer vacation in Idaho, after \( t \) hours of driving.

a) Evaluate \( d(10) \) and interpret its meaning in the context of the problem.

b) Find \( t \) so that \( d(t) = 0 \) and interpret it’s meaning in the context of the problem.

c) Find the slope of the function and interpret its meaning in the context of the problem.

d) Find the vertical intercept of the function and interpret its meaning in the context of the problem.

e) Suppose Donna wants to make the trip home in 10 hours. How much faster would she need to travel? Explain.
### Exponential Functions

25. Complete the following table. Use proper notation.

<table>
<thead>
<tr>
<th></th>
<th>$f(x) = 24(1.32)^x$</th>
<th>$f(x) = 324(0.92)^x$</th>
<th>$f(x) = (1.04)^x$</th>

28. Fred and Wilma purchase a home for $150,000. Using function notation, write a formula for the value, $V$, of the house $t$ years after its purchase, assuming that the value

   a) Decreases by $1,000 per year.  
   b) Decreases by 3% per year.  

   c) Increases by $3,000 per year.  
   d) Increases by 5% per year.  

29. The function $f(x) = 300(1.15)^x$ gives the population of a city (in thousands) $x$ years since 2000.

   a) Identify the vertical intercept. Write it as an ordered pair and interpret its meaning in this situation.

   b) Is the population of this city increasing or decreasing? At what rate? Write your answers in complete sentences and include all appropriate units.

   c) Determine $f(10)$ and write a sentence explaining the meaning of your answer.

   d) How long will it take the population of this city to reach one million? Show all work and write your answer in a complete sentence.

   e) How long will it take the population to double? Show all work and write your answer in a complete sentence.
30. You purchased a vehicle for $30,000. Assuming the value of the car decreases at 8% per year, write an equation that represents the value, $V(t)$, of the car $t$ years from now. How many years does it take for the value to decay to $20,000? Round to the nearest hundredth.

31. Determine an exponential regression function, $P(t)$ to represent the data below. Let $t=0$ in the year 1930. Round “a” to the nearest whole number and “b” to 4 places. In what year will the population reach 5000 (round to the nearest whole year)?

<table>
<thead>
<tr>

</table>

34. Evaluate each of the following logarithms. Write “N” if the answer does not exist.

a) $\log_b 1 = \underline{\phantom{00000}}$  
b) $\log_b b = \underline{\phantom{00000}}$

c) $\log_b 0 = \underline{\phantom{00000}}$  
d) $\log_b b'' = \underline{\phantom{00000}}$

35. Evaluate each of the following logarithms without a calculator. Your answers must be exact.

a) $\log_5 1 = \underline{\phantom{00000}}$  
b) $\log_3 \left(\frac{1}{3}\right) = \underline{\phantom{00000}}$

c) $\log_2 2 = \underline{\phantom{00000}}$  
d) $\log_8 (64) = \underline{\phantom{00000}}$

e) $\log_5 \left(\frac{1}{25}\right) = \underline{\phantom{00000}}$  
f) $\log \sqrt[3]{10} = \underline{\phantom{00000}}$

36. Use the change of base formula and your calculator to evaluate each of the following. Show your work. Round your answers to two decimal places.

a) $\log_5 (81)$  
b) $\log_3 (57)$
37. Consider the function \( g(x) = \log_3 x \)

a) Graph \( g(x) \) on your graphing calculator. In the space below, draw what you see on your calculator screen. Use window \( \text{xmin}=0, \text{xmax}=10, \text{ymin}=-2, \text{ymax}=2 \).

b) What is the domain of \( g(x) \)? ____________________________

c) What is the range of \( g(x) \)? ____________________________

d) For what values of \( x \) is \( g(x) \) positive? __________________

e) For what values of \( x \) is \( g(x) \) negative? __________________

f) For what values of \( x \) is \( g(x) \) increasing? __________________

g) What is the vertical intercept? ______________

h) What is the horizontal intercept? ______________

i) Give the \textit{equation} of the vertical asymptote for \( g(x) \). ______________

j) For what value of \( x \) is \( g(x) = 1 \)? ______________

k) For what value of \( x \) is \( g(x) = 3 \)? ______________

l) Determine \( g(42) \). Round your answer to three decimal places.
Lesson 12 – Course Review

Practice Problems

38. Evaluate $30 - 5\log_2 8$ both WITH and WITHOUT your calculator.

39. Solve the following equations. Simplify your answers. Where applicable, give both the exact answer and the decimal approximation rounded to three decimal places. Show all algebraic work. Do not round until the end of the problem!!

a) $8 - 2\log_7 x = 10$

b) $1000(1.12)^x = 2000$

c) $3 + \log(120 - x) = 5$

d) $4^{2x} = 1000$

e) $2340(0.82)^x = 1250$

f) $5 + 3\log(x - 2) = 7$

g) $54(1.05)^x = 250$

h) $\log_7(5x - 1) = 10$
### Quadratic Functions

40. Fill out the following table. Intercepts must be written as ordered pairs. Always use proper notation. Round to two decimal places.

<table>
<thead>
<tr>
<th></th>
<th>$f(x) = x^2 - 5x + 4$</th>
<th>$g(x) = 16 - x^2$</th>
<th>$y = x^2 - 2x + 5$</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opens Upward or Downward?</td>
<td></td>
<td></td>

</tbody>
</table>
41. Factor each of the following. Write your answer in completely factored form.

   a) $3x^2 - 9x$
   b) $x^2 - 4x + 3$
   c) $x^2 + x - 30$
   d) $x^2 - 9$

42. Solve $x^2 + 18x - 68 = 20$ using the methods indicated below. Show all work.

   a) Solve by graphing. Sketch the graph on a good viewing window (the vertex, intercepts and intersection points must appear on the screen). Mark and label the solutions on your graph.

   Xmin: _______  Xmax: _______
   Ymin: _______  Ymax: _______

   Solution(s): __________________________

   b) Solve by factoring.

   c) Use the quadratic formula to solve.
43. Solve the following equations \textit{algebraically} (Factoring or Quadratic Formula). You must show all algebraic steps for full credit. Where applicable, give both the exact answers \textit{and} the decimal approximations rounded to three decimal places. Write complex solutions in the form \(x = a + bi\) and \(x = a - bi\). Use your calculator to check your answers. Sketch the graph on a good viewing window (the vertex, vertical intercept, and any horizontal intercepts should appear on the screen). \textbf{Mark and label} any real solutions on the graph.

a) \(2x^2 - 8x + 10 = 4\)

b) \(2x^2 = -6x\)

c) \(x^2 + 4 = 4x\)
d) \( x^2 - 2x + 5 = 0 \)

e) \( x^2 - 3x = 10 \)

f) \( -x^2 + x = 2 \)
Lesson 12 – Course Review

Practice Problems

44. Simplify the following:
   a) $3i(5 - 2i)$  
   b) $(3 + i) - (2 - 3i)$  
   c) $(3 + i)(2 - 3i)$

45. Given a quadratic equation in the form $f(x) = ax^2 + bx + c$, draw the graph of a parabola where $a > 0$ and $c < 0$. 
46. Suppose \( h(t) = -16t^2 + 40t + 80 \) represents the height of a ball (measured in feet above the ground) thrown from a roof as a function of time (in seconds).

a) Find the value(s) of \( t \) such that \( h(t) = 24 \). Interpret your results in the context of this problem.

b) Write the equation you would solve to determine when the ball will hit the ground. Solve this equation to an accuracy of two decimal places. Show your work.

c) Determine the maximum height of the ball. Explain how you found this.

d) Determine the practical domain and range of \( h(t) \)
Radical Functions

47. Complete the table. Write intercepts as ordered pairs. Use inequality notation for domain and range. Round to the nearest hundredth as needed.

<table>
<thead>
<tr>
<th></th>
<th>( f(x) = \sqrt[3]{3x} )</th>
<th>( f(x) = \sqrt{x+9} )</th>
<th>( f(x) = \sqrt[3]{12-x} )</th>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
48. Solve each of the equations algebraically. Show all of your work. Round any decimal results to three places. Write your answers in exact form.

a) \(6 + \sqrt[3]{7 - 3x} = 16\)

b) \(\sqrt[8]{x - 7} = x\)

c) \(4\sqrt{x - 6} = 12\)

d) \(\frac{3}{4}2x + 8 + 5 = 0\)

e) \(\sqrt{2x + 10} + 5 = x + 6\)

f) \(5 - \sqrt{5x} = 11\)
### Rational Functions

49. Complete the table. Write intercepts as ordered pairs. Use inequality notation for domain and range. Round to the nearest hundredth as needed.

<table>
<thead>
<tr>
<th></th>
<th>( f(x) = \frac{6}{3x} )</th>

</tbody>
</table>
50. Solve the following equations algebraically. You must show all algebraic steps for full credit. Where applicable, give both the exact answers and the decimal approximations rounded to three decimal places. Use your calculator to check your answers. Sketch the graph on a good viewing window. Mark and label the solution(s) on the graph.

a) \( \frac{5}{9} = \frac{8}{x+1} \)

b) \( 4x = 7 + \frac{2}{x-1} \)
Lesson 12 Assessment

The table below shows the value, $V$ (in thousands of dollars), of an investment $x$ years after 1990.

<table>
<thead>
<tr>
<th>$x$</th>
<th>1</th>
<th>2</th>
<th>5</th>
<th>8</th>
<th>12</th>
<th>15</th>
<th>18</th>
<th>21</th>
</tr>
</thead>
<tbody>
<tr>
<td>$V(x)$</td>
<td>10.1</td>
<td>12.5</td>
<td>16.0</td>
<td>19.1</td>
<td>21.3</td>
<td>20.8</td>
<td>17.1</td>
<td>12.9</td>
</tr>
</tbody>
</table>

1. Use the table to determine $V(15)$. Write your answer as an ordered pair, and interpret its meaning in a complete sentence.

2. Use your graphing calculator to generate a scatterplot of this data set. Based on the scatterplot, what type of function do you think best fits this data set? Circle one.

   Linear  Exponential  Quadratic

3. Use your calculator to determine a regression equation for this data set. This must be the same type of function chosen in problem 2. Use function notation, and round to three decimal places as needed.

4. Use your graphing calculator to generate a scatterplot of the data and regression line on the same screen. You must use an appropriate viewing window. In the space below, draw what you see on your calculator screen, and write down the viewing window you used.

   Xmin=__________
   Xmax=__________
   Ymin=__________
   Ymax=__________
5. Use your regression equation to determine $V(15)$. Round your answer to the nearest hundredth. Write your answer as an ordered pair, and interpret its meaning in a complete sentence.

6. Your answers for questions 1 and 5 should be different. Why is this the case? Answer in a complete sentence.

7. Determine the value of this investment in the year 2013. Show your work, and write your answer in a complete sentence.

8. Determine the vertical intercept for $V(x)$. Write it as an ordered pair, and then write a sentence explaining its meaning in this situation.

9. Determine the horizontal intercept for $V(x)$. Write it as an ordered pair, and then write a sentence explaining its meaning in this situation.
Appendix A: You Try Answers

Lesson 1 – Introduction to Functions

3.
   a) Input: Time (in years); Output Value: (in dollars)
   b) Dependent: \( V \); Independent: \( t \)
   c) Two years after purchase, the value of the car was $24630.
   d) Yes. Value of the car is a function of time. Each input is paired with a single output.

12.
   a) \( f(2) = -10 \), \( (2, -10) \)
   b) \( f(-\frac{11}{3}) = 7 \), \( (-\frac{11}{3}, 7) \)
   c) \( f(-3) = 5 \), \( (-3, 5) \)
   d) \( f(8/3) = -12 \), \( (8/3, -12) \)
   e) \( f(-x) = 3x - 4 \)
   f) \( f(x - 5) = -3x + 11 \)

19.
   a) Domain: \{7, 8, 11\}, Range: \{8, 12, 21\}
   b) Domain: \{3, 6, 8\}, Range: \{33, 42, 51\}
   c) Domain: \(-7 \leq x < 4\), \([-7,4)\), Range: \(-6 \leq f(x) < 7\), \([-6,7)\)

22.
   a) \( C(x) = 3.25x + 30.00 \)
   b) 0 miles, 25 miles
   c) $30, $111.25
   d) If 60 miles are towed, the cost is $225.
   e) \( (15, 78.75) \) If 15 miles are towed, the cost is $78.75.
   f) \( x = 0 \) (0, 30) If 0 miles are towed, the cost is $30.

23.
   a) \( t = \) time in years
   b) \( V(t) = \) value in $
   c) 1200, 600, 0
   d) Graph should include labels for plotted points and axes. Points should be connected. Graph should not extend beyond the starting/ending points from the table.
   e) 8 years old
   f) $1000
   g) \( 0 \leq t \leq 12 \) years or \([0, 12]\)
   h) \$0 \leq V(t) \leq $1200 or \([0, 1200]\)

Lesson 2 – Functions and Function Operations

3.  
   a) 13  b) 3  c) 3

6.  
   a) $9x^2 - 4$  b) $2x^5 - 8x^3 + 10x^2$  c) $-24x^4$

9.  
   a) $-5x + \frac{4}{5}x^3$  b) $-5x^3 + 4 - \frac{2}{x^3}$

11.  
   10, 0, 2, -2, 3

12.  
   a) 0  b) 3  c) -4  d) 2  e) -1  f) 4 or -4  g) 0 or -2  h) 0  
   i) -3  j) 0  k) -4  l) undefined

14.  
   a) $C(n) = 450 + .60n$  
   b) $R(n) = 1.80n$  
   c) $P(n) = 1.20n - 450$  
   d) If Charlie sells 300 chocolates the week before Valentine’s day, he loses $90.  
   e) Practical Domain $0 \leq n \leq 3000$ chocolates. Practical Range: $-450 \leq P(n) \leq 3150$ dollars. See graph below.  
   f) Charlie must sell 375 chocolates to break even. (Be sure to mark on your graph).

17.  
   a) $f(g(x)) = 28 - 3x$  b) $g(f(5)) = -19$

19.  
   a) $A(B(4)) = 11$  b) $B(A(1)) = 15$  c) $B(A(7)) = 2$  d) $A(B(1)) = 5$

21.  
   a) $T(n) = 1800 + 58n$  b) $D(T) = .85T$  c) $D(T(n)) = 1530 + 49.3n$  
   d) Discounted cost (output) in terms of # of people attending (input)  
   e) If 100 people attend, the discounted cost is $6460  
   f) 70 (must round down as 71 people would cost more than $5000)
Lesson 3 – Linear Equations and Functions

2.  
   a) \( m = -\frac{3}{4} \) 
   b) \( m = 4 \) 

7.  
   a) \( m = -4 \), Decreasing, V.I. (0, 6), H.I. (3/2,0) 
   b) \( m = 3 \), Increasing, V.I. (0,0), H.I. (0,0) 
   c) \( m = \frac{3}{5} \), Increasing, V.I. (0, -8), H.I. (40/3, 0) 

11.  
   a) V.I. (0,6), H.I. (4, 0) 
   b) \( m = -\frac{3}{2} \), (8, -6), (-2, 9), other ordered pairs possible. These points must be clearly marked on the graph. 

13.  
   a) show graph in space provided, equation \( x = 2 \), slope is undefined, V.I. none, H.I. (2,0) 
   b) show graph in space provided, equation \( y = -3 \), slope is 0, V.I. (0, -3), H.I. none 

16.  
   a) \( y = -3x + 7 \)  b) (0, 7)  c) \( \frac{7}{3}, 0 \) 

18.  
   a) Decreasing b) (0,4) c) (4, 0) d) \( m = -1 \) e) \( y = -x + 4 \) 

20.  
   a) (0, 20) b) (30, 0), c) \( D = -\frac{2}{3}t + 20 \) d) The person traveled 2/3 miles in one minute (i.e. they were 19.3 miles from home).
Lesson 4 – Linear Functions and Applications

1.  
   a) Vertical Intercept (0, 3861).  
   b) $E(2) = 3706.6$ feet  
   c) $E(4) = 3552.2$ feet  
   d) Decreasing  
   e) $3397.8 \leq E(t) \leq 3861$ feet above sea level.

4.  
   a) Linear slope = $-48$  
   b) Linear slope = $0.2$ or $\frac{1}{5}$  
   c) Not linear

6.  
   a) Vertical Intercept (0, 196)  
   b) -2 lbs per week  
   c) During this 5-week time period, this person’s weight was decreasing at an average rate of 2 pounds per week. (During this 5-week time period, this person loses an average of 2 pounds per week.)  
   d) No. The data are not exactly linear because the AROC is not constant.  
   e) Be sure to include all the criteria for a GOOD graph.

8. Answers vary. All data points must appear on the screen. Use the highest and lowest values in the data set to determine an appropriate viewing window.

9. Answers vary

11.  
   a) From the table (6, 26.24)  
   b) $y = 0.322x + 24.155$  
   c) Answers vary  
   d) From the regression equation (6, 26.087)  
   e) The given data set is not exactly linear so not all the table data points will match the equation model.

12.  
   a) $y = 0.279x+27.281$, $C(t) = 0.279t+27.281$  
   b) $C(3) = 28.118$ million trees  
   c) $C(9) = 29.792$ million trees  
   d) $m = 0.279$; The total number of Christmas trees sold in the U.S. is increasing at a rate of 279,000 trees each year.
Lesson 5 – Introduction to Exponential Functions

1. 
   a) input 
   b) output 
   c) line, m, (0, b) 
   d) > 
   e) < 
   f) constant 
   g) All real numbers OR \(-\infty < x < \infty\)

6. 
   a) Common Ratio is about .8 so data are best modeled by exponential function 
   b) \(f(x) = 15(0.8)^x\) 
   c) 1.61 
   d) \(2.14 \times 10^{-4} = 0.000214\)

9. 
   \(f(x) = 335(1.25)^x\) 
   335, 1.25, All real numbers OR \(-\infty < x < \infty\), \(f(x) > 0\), none, (0, 335), \(y = 0\), increasing 
   
   \(g(x) = 120(0.75)^x\) 
   120, 0.75, All real numbers OR \(-\infty < x < \infty\), \(g(x) > 0\), none, (0, 120), \(y = 0\), decreasing

13. 
   Note: The window values that you indicate on your paper must show the intersection of the Y1 and Y2 equations you input into your calculator. 
   a) \(x = 31.41\) 
   b) \(x = 3.16\) 
   c) \(x = -38.96\)

15. 
   a) \(V(n) = 24800(0.86)^n\) 
   b) $11,666.60

16. 
   a) \(P(t) = 208,000(1.034)^t\) 
   b) 237764 people in 2014 
   c) 2021

17. 
   a) (0, 100) 
   b) 35.96 mg 
   c) 5.42 hours 
   d) Answers vary
Lesson 6 – More Exponential Functions

1. a) input b) output c) All real numbers d) f(x) > 0 e) a f) (0, a) g) does not exist h) y = 0 i) b > 1 j) 0 < b < 1

4. \( y = 300(0.88)^t \), Decay, 300, 0.88, 0.12, 12%
\( y = 213(1.2)^t \), Growth, 213, 1.2, 0.20, 20%
\( y = 177(1.098)^t \), Growth, 177, 1.098, 0.098, 9.8%
\( y = 5.41(0.93)^t \), Decay, 5.41, 0.93, 0.07, 7%

7. a) \( 52000, 0.03, 1.03, 52000(1.03)^t \)
b) $60282.25
c) \( 104000 = 52000(1.03)^t \), 23 years

10. a) \( 462,768, .014, .986, P(t)=462,768(0.986)^t \)
b) 354,017
c) \( 231,384 = 462,768(0.986)^t \), t is approximately 49 years

12. a) \( y = 82.9(0.837)^t \), \( P(t) = 82.9(0.837)^t \)
b)

\[
\text{WINDOW} \\
Xmin=0 \\
Xmax=20 \\
Xscl=1 \\
Ymin=0 \\
Ymax=150 \\
Yscl=1 \\
\text{Xres}=1
\]
c) 16.3% d) (20, 2.36) e) (6.10, 28)

13. a) \( V(n) = 4.64(1.082)^n \)
b) 8.2%
c) \( V(12) = 11.95 \) (using rounded model)
d) 38.96 years
e) 8.80 years
Appendix A: You Try Answers

Lesson 7 – Logarithms and Logarithmic Functions

1.
1, 2, 3, 4

4.
a) \( \log_3 81 = 4 \)  
b) \( 10^6 = x \)  
c) \( 2^{-3} = \frac{1}{8} \)

7.
a) 6 because \( 2^6 = 64 \)  
b) 0 because \( 5^0 = 1 \)  
c) -3 because \( 10^{-3} = \frac{1}{1000} \)  
d) Does not exist  
e) \( \frac{1}{2} \) because \( 8^{1/2} = \sqrt{8} \)

9.
b) 2.307  
c) 1.195  
d) 8.548  
e) 15.730

12.
a) \( x > 0 \)  
b) All real numbers  
c) (1,0)  
d) Does not exist  
e) \( x = 0 \)
f) \( x > 0 \)  
g) \( x > 1 \)  
h) \( 0 < x < 1 \)  
i) \( x = 1 \)  
j) \( x = 6 \)

16.
\( x = 33 \) (exact) and no rounding needed

17.
Exact Solution \( x = \frac{3^{0.75} - 1}{7} \), rounded to three decimals 0.183,

Use the exact answer to check. Show all algebraic steps.

20.
\( x = \log_3 5.3 \) (exact),  
\( x = 1.518 \) (rounded)
3. 
a = 2, b = 0, c = -5
Parabola opens up because a > 0.
Vertical intercept = (0, -5)

6. 
a = 2, b = 0, c = -5
Vertex (0, -5)
Axis of symmetry equation: x = 0

9. 
Vertex (0, -5)
Domain: (-\infty, \infty) OR All real numbers OR \(-\infty < x < \infty\)
Range: \(f(x) \geq -5\) OR \(-5 \leq f(x) < \infty\) OR \([-5, \infty)\)

12. 
Vertex (0, -5)
Vertical intercept = (0, -5)
Horizontal intercepts (-1.58, 0) & (1.58, 0)

15. 
Note: The window values that you indicate on your paper must show the intersection of the Y1 and Y2 equations you input into your calculator.

a) x = 2.35 OR -2.35
b) x = 3.88 OR -12.88

18. 
b) 4.00 seconds, c) 259 feet, d) 8.02 seconds, e) (0,3), f) 0 sec \leq t \leq 8.02 \text{ sec},
g) 0 \text{ ft} \leq H(t) \leq 259 \text{ ft}

20. 
a) \(H(t) = -15.786x^2 + 95.814x + 1.6\)
b) \(H(5) = 86.02 \text{ feet}\)
c) 146.99 feet
d) 3.03 seconds
e) Practical Domain: 0 sec \leq t \leq 3.03 sec
    Practical Range: 0 ft \leq H(t) \leq 146.99 ft
Lesson 9 – Solving Quadratic Equations

2. 
   a) 1 repeated real solution, \( x = -3 \) 
   b) no real solution 
   c) 2 real solutions, \( x = -3.5, 1 \)

5. 
   a) \( 16b(4b - 1) \) 
   b) \( c(11c + 7) \)

8. 
   a) \( (n + 7)(n + 1) \) 
   b) \( (r + 10)(r - 7) \) 
   c) \( (m + 5)(m - 6) \)

11. 
   a) \( x = -5 \) or \( x = 2 \) 
   b) \( x = \frac{17}{3} \) or \( x = 0 \)

14. 
   \( x = -\frac{5}{3} \) or \( x = 4 \)

17. 
   a) \( 5 - i \) 
   b) \( 100 - 18i \)

20. 
   \( \frac{3}{4} + \frac{\sqrt{31}}{4}i, \frac{3}{4} - \frac{\sqrt{31}}{4}i, \)

21. 
   \( x = -5 \) or \( x = 2 \)
Appendix A: You Try Answers

Lesson 10 – Radical Functions

3. 
   a) 6  
   b) -4  
   c) 64  
   d) not a real number  
   e) 81  
   f) 1.63

5. 
   Domain $x \leq 3$  
   Horizontal-intercept (3, 0)  
   Vertical-intercept $(0, \sqrt[3]{12})$ or $(0, 3.5)$  
   Graph should include vertical and horizontal intercepts plotted and labeled.

8. 
   Domain: All Real Numbers  
   Horizontal-intercept (-8, 0)  
   Vertical-intercept (0, 2)  
   Graph should include vertical and horizontal intercepts plotted and labeled.

10. 
    a) Domain: All Real Numbers  
        Horizontal-intercept (20, 0)  
        Vertical-intercept $(0, \sqrt[3]{20})$ or $(0, 1.82)$  
        Graph should include vertical and horizontal intercepts plotted and labeled.  
    b) Domain: $x \geq -2$  
        Horizontal-intercept (-2, 0)  
        Vertical-intercept $(0, \sqrt[4]{8})$ or $(0, 1.30)$  
        Graph should include vertical and horizontal intercepts plotted and labeled.

13. 
   $x = 111.38$

16. 
   a) $x = -77$  
   b) $x = \frac{-77}{3} \approx 5.77$  
   c) No real solution  
   d) $x = -\frac{998}{5} = -199.6$

19. 
   $x = -2$
3. 
   a) Domain: All real numbers except 5, Vertical Asymptote: x = 5, 
      Horizontal Asymptote: y = 0
   b) Domain: All real numbers except $-\frac{1}{2}$, Vertical Asymptote: x = $-\frac{1}{2}$,
      Horizontal Asymptote: y = $\frac{3}{2}$
   c) Domain: All real numbers except 4, Vertical Asymptote: x = 4,
      Horizontal Asymptote: y = -2

8. 
   a) $x = 3.25$
   b) $x = 3.25$

10. 
    a) Domain: All real numbers except $-\frac{4}{3}$
    b) $x = -\frac{4}{3}$
    c) $y = 5$
    d) (0, -3)
    e) (0.80,0)
    f) $g(5) = 3.32$
    g) $x = -0.51$

12. 
    a) $T(r) = \frac{308.6}{r}$
    b) 
    c) $r = 61.72$ mph
Lesson 12 – Course Review

1. \( f(x) = \frac{2}{3}x - 6 \)  
   \( g(x) = -4x \)  
   \( h(x) = 103 \)

Determine \(f(8)\):

|                  | \(1/6 \approx 0.17\) | \(-26/3 \approx -8.67\) |

7.

a) Solutions: \(x = -0.53, \quad x = 2.53\)
b) Solution: \(x = 15.9\)
c) Solution: \(x = 44\)

8.

a) Solutions: \(x = 1 + \frac{\sqrt{84}}{6} = 1 + \frac{\sqrt{21}}{3} \approx 2.53, \quad x = 1 - \frac{\sqrt{84}}{6} = 1 - \frac{\sqrt{21}}{3} \approx -0.53\)
b) Solution: \(x = \log_{1.08}(3.4) \approx 15.9\)
c) Solution: \(x = 44\)
d) Solution: \(x = 5^{1/2} + 4 = \sqrt{5} + 4 \approx 6.24\)
e) Solution: \(x = -10\)
f) Solution: \(x = 999\)

9.

a) It takes the rocket 4 seconds to reach its maximum height.
b) The maximum height of the rocket is 259 feet.
c) It takes 8.02 seconds for the rocket to hit the ground.
d) \((0, 3)\) After 0 seconds, the rocket is 3 feet above the ground.
   The rocket was three feet above the ground when it was shot.
e) Practical domain: \(0 \leq t \leq 8.02\) seconds
f) Practical range: \(0 \leq H(t) \leq 259\) feet
10.  
   a) In 2001 the surface elevation of Lake Powell was 3707 feet above sea level.  
   b) \( E(5) = 3475 \), In 2004, the surface elevation of Lake Powell was 3475 feet above sea level.  
   c) (0, 3861)  In 1999, the surface elevation of Lake Powell was 3861 feet above sea level.  
   d) Slope = -77.2 feet per year.  The surface elevation of Lake Powell is decreasing at a rate of 77.2 feet per year. 
   e) Practical range: \( 3398 \leq E(t) \leq 3861 \) feet above sea level

11.  
   g) \( A(x) = 36(0.86)^x \)  
   h) \( A(3) = 22.9 \)  After 3 hours, 22.9mg of caffeine remain in the body.  
   i) \( A(16.5) = 3 \)  After 16.5 hours, 3mg of caffeine remain in the body.  
   j) 0.96mg of caffeine remains the body one day after drinking one can of Diet Pepsi. 
   k) It will take the body 4.6 hours to metabolize half of the caffeine from one can Diet Pepsi.  
   l) According to this model, all of the caffeine will never leave the body.

12.  
   a) \( T(r) = \frac{355}{r} \)  
   b) If your average speed is 55mph, it will take you 6.5 hours to reach San Diego.  
   c) If your average speed is 35.5mph, it will take you 10 hours to reach San Diego.  
   d) \( T(r) \) has no vertical intercept.  If you drive 0 mph, you will never reach San Diego!  
   e) \( T(r) \) has no horizontal intercept.  No matter how fast you drive, you cannot reach San Diego in 0 hours.  
   f) Vertical Asymptote: \( x = 0 \).  The slower you drive (the closer your average speed gets to 0mph), the longer it will take for you to reach San Diego.  
   g) Horizontal Asymptote: \( y = 0 \).  The faster you drive, the less time it will take for you to reach San Diego.

13.  
   f) \( V(n) = 4.64(1.082)^n \)  
   g) The value of this investment is increasing at a rate of 8.2% each year.  
   h) \( V(12) = 11.95 \)  After 12 years, this investment will be worth $11,950.  
   i) It will take 38.96 years for the value of this investment to reach $100,000.  
   j) It will take 8.8 years for the value of this investment to double.

14.  
   e) Linear:  \( P(x) = 63127x + 3817117 \)  
   f) Exponential:  \( P(x) = 3817117(1.017)^x \)  
   g) In 2015, the population of Maricopa County will be 4,132,752.  
   h) In 2015, the population of Maricopa County will be 4,152,793.
